Editorial Note  xi
Preface  1
1 General Remarks on the Vedânta  7
2 Fundamental Distinction between the ‘Self and the ‘Ego’  21
3 The Vital Center of the Human Being: Seat of Brahma  31
4 Purusha and Prakriti  39
5 Purusha unaffected by Individual Modifications  46
6 The Degrees of Individual Manifestation  51
7 Buddhi or the Higher Intellect  57
8 Manas or the Inward Sense: The Ten External Faculties of Sensation and Action  61
9 The Envelopes of the ‘Self’: The Five Vâyus or Vital Functions  67
10 The Essential Unity and Identity of ‘Self’ in all the States of the Being  72
11 The Different Conditions of Atmâ in the Human Being  79
12 The Waking State: or the Condition of Vaishvânara  82
13 The Dream State: or the Condition of Tâjasa  88
14 The State of Deep Sleep: or the Condition of Prâjna  95
15 The Unconditioned State of Atmâ  102
16 Symbolical Representations of Atmâ and its Conditions by the Sacred Monosyllable Om  108
17 The Posthumous Evolution of the Human Being  112
EDITORIAL NOTE

The past century has witnessed an erosion of earlier cultural values as well as a blurring of the distinctive characteristics of the world’s traditional civilizations, giving rise to philosophic and moral relativism, multiculturalism, and dangerous fundamentalist reactions. As early as the 1920s, the French metaphysician René Guénon (1886–1951) had diagnosed these tendencies and presented what he believed to be the only possible reconciliation of the legitimate, although apparently conflicting, demands of outward religious forms, ‘exoterisms’, with their essential core, ‘esoterism’. His works are characterized by a foundational critique of the modern world coupled with a call for intellectual reform; a renewed examination of metaphysics, the traditional sciences, and symbolism, with special reference to the ultimate unanimity of all spiritual traditions; and finally, a call to the work of spiritual realization. Despite their wide influence, translation of Guénon’s works into English has so far been piecemeal. The Sophia Perennis edition is intended to fill the urgent need to present them in a more authoritative and systematic form. A complete list of Guénon’s works, given in the order of their original publication in French, follows this note.

Guénon published his fundamental doctrinal work, *Man and His Becoming according to the Vedānta*, in 1925. After asserting that the Vedānta represents the purest metaphysics in Hindu doctrine, he acknowledges the impossibility of ever expounding it exhaustively and states that the specific object of his study will be the nature and constitution of the human being. Nonetheless, taking the human being as point of departure, he goes on to outline the fundamental principles of all traditional metaphysics. He leads the reader gradually to the doctrine of the Supreme Identity and its logical corollary—the possibility that the being in the human state might in this very life attain liberation, the unconditioned state where all separateness and risk of reversion to manifested existence ceases.
Although Guénon chose the doctrine of the Advaita school (and in particular that of Shankara) as his basis, Man and His Becoming should not be considered exclusively an exposition of this school and of this master. It is, rather, a synthetic account drawing not only upon other orthodox branches of Hinduism, but not infrequently also upon the teachings of other traditional forms. Neither is it a work of erudition in the sense of the orientalists and historians of religion who study doctrines from the 'outside', but represents knowledge of the traditionally transmitted and effective 'sacred science'. Guénon treats other aspects of Hinduism in his Introduction to the Study of the Hindu Doctrines and Studies in Hinduism.

Guénon often uses words or expressions set off in 'scare quotes'. To avoid clutter, single quotation marks have been used throughout. As for transliterations, Guénon was more concerned with phonetic fidelity than academic usage. The system adopted here reflects the views of scholars familiar both with the languages and Guénon's writings. Brackets indicate editorial insertions, or, within citations, Guénon's additions. Wherever possible, references have been updated, and English editions substituted.

The present translation is based on the original work of Richard C. Nicholson. The text was checked for accuracy and further revised by James Wetmore, with further reviews by John Ahmed Herlihy and John Champoux. A special debt of thanks goes to Cecil Bethell, who revised and proofread the text at several stages and provided both the general index and the index of Sanskrit terms.

THE WORKS OF RENÉ GUÉNON

Introduction to the Study of the Hindu Doctrines (1921)
Theosophy: History of a Pseudo-Religion (1921)
The Spiritist Fallacy (1923)
East and West (1924)
Man and His Becoming according to the Vedanta (1925)
The Esoterism of Dante (1925)
The Crisis of the Modern World (1927)
The King of the World (1927)
Spiritual Authority and Temporal Power (1929)
The Symbolism of the Cross (1931)
The Multiple States of the Being (1932)
The Reign of Quantity and the Signs of the Times (1945)
Perspectives on Initiation (1946)
The Great Triad (1946)
The Metaphysical Principles of the Infinitesimal Calculus (1946)
Initiation and Spiritual Realization (1952)
Insights into Christian Esoterism (1954)
Symbols of Sacred Science (1962)
Studies in Freemasonry and the Compagnonnage (1964)
Studies in Hinduism (1966)
Traditional Forms and Cosmic Cycles (1970)
Insights into Islamic Esoterism and Taoism (1973)
Reviews (1973)
Miscellanea (1976)
On several occasions we have expressed in previous writings the intention of undertaking a series of studies that would aim, according to the needs of the case, either at presenting a direct exposition of various aspects of the Eastern metaphysical doctrines, or at making such adaptations of them as might seem most intelligible and advantageous, while however always remaining strictly faithful to their spirit. The present work constitutes the first of these studies. For reasons which have already been explained elsewhere, we have taken the Hindu doctrines as our central authority, and more especially the teaching of the Vedānta which is the most purely metaphysical branch of these doctrines. It should be clearly understood, however, that there is nothing in this procedure to prevent us, as occasion arises, from pointing out analogies and making comparisons with other theories, regardless of their origin; in particular, we shall refer to the teachings of other orthodox branches of the Hindu doctrine insofar as they clarify or complete the teachings of the Vedānta on various points. To anyone inclined to raise objections to the adoption of such a method we would reply that such criticism is all the less justifiable in that our intentions are in no wise those of a historian; we wish to re-assert emphatically at this point that our purpose is not erudition but understanding, and that it is the truth of ideas which interests us exclusively. If therefore it has seemed desirable in the present instance to supply precise references, we have done so for reasons quite unconnected with the special preoccupations of orientalists; we simply wished to show that we have invented nothing and that the ideas expounded derive from a genuine traditional source; at the same time, for the sake of those who are able to profit thereby, we have furnished the means of referring to texts containing complementary information, for it goes without saying that we make no claim to put forward an absolutely complete exposition of the doctrine, even regarding a single point.
As for an exposition of the entire doctrine, such a thing would be a sheer impossibility; either it would involve an interminable labor, or it would require to be put in so synthetic a form as to be quite incomprehensible to Western readers. Moreover, in a work of that sort, it would be extremely difficult to avoid an appearance of systematization which is incompatible with the most essential characteristics of the metaphysical doctrines; doubtless, this would amount to no more than an appearance, but nonetheless it would inevitably be productive of extremely serious errors, all the more so since Western people, by reason of their mental habits, are only too prone to discover 'systems' even where none exist. One must forever be on one's guard against affording the slightest pretext for unjustifiable assimilations of this kind; better abstain altogether from expounding a doctrine than contribute toward denaturing it, even if merely through clumsiness. Fortunately, however, there is a way out of the difficulty; this consists in treating a particular point or one more or less definite aspect of the doctrine at a time, leaving oneself free to take up other points afterward, in order to make them in their turn the subject of other separate studies. Moreover, there will never be any danger of these studies becoming what the erudite and the specialists call 'monographs', because the fundamental principles will never be lost sight of, and the secondary points themselves can therefore only appear as direct or indirect applications of those principles, from which all else derives; in the metaphysical order, that is to say in the realm of the Universal, there can be no place at all for 'specialization'.

From the foregoing remarks it should be clear why we have restricted the scope of the present study to the nature and constitution of the human being: to make our comments intelligible we shall naturally be obliged to touch upon other subjects which at first sight may appear to be beside the point, but it will always be in relation to this one subject that we shall introduce them. The principles themselves are possessed of a range vastly exceeding the entire field of their possible applications; but it is nonetheless legitimate to expound them, wherever such a thing is possible, in relation to this or that particular application, and this is a procedure which in fact offers considerable advantages. Moreover, it is only insofar as any question, no matter what, is related to principles that it can be said to be treated metaphysically; it is this truth which must never be lost sight of, so long as it is intended to treat of genuine metaphysics and not of the pseudo-metaphysics of European philosophers.

If we have embarked first upon the exposition of questions relative to the human being, it is not because these questions enjoy any exceptional importance in themselves from the purely metaphysical point of view: that point of view being essentially detached from every contingency, the case of man can never appear to it as a privileged one. We have begun with the discussion of these questions simply because they have already been raised during the course of our previous writings and thus a complementary work such as the present one now seems called for. The order in which any subsequent studies may appear will depend similarly on circumstances and will largely be determined by considerations of expediency; we think it advisable to mention this at the outset lest anyone should be tempted to see some sort of hierarchical order in our works, either as regards the importance of the questions treated or as regards their interdependence one upon another: that would be to attribute to us an intention which we have never entertained, but we know only too well how easily such misunderstandings arise, and that is why we take steps to forestall them whenever it lies within our power to do so.

There is a further point which is of too great importance to be passed over without comment in these preliminary observations, although we thought we had explained ourselves clearly enough on other occasions; but we have noticed that some people have failed to grasp our meaning and it is therefore advisable to emphasize it still further. Genuine knowledge, which alone concerns us, has little if anything at all to do with 'profane' knowledge; the studies which go to make up the latter cannot be looked upon even as an indirect path of approach to 'sacred science'; on the contrary, at times they even constitute an obstacle, by reason of the often irremediable mental deformation which is the commonest consequence of a certain kind of education. For understanding doctrines such as those we are expounding here, a study undertaken merely 'from the outside' is of no avail; as we have already remarked, it is not a question
of history or philology or literature; and we will add, at the risk of repeating ourselves to a degree which some may consider fastidious, it is not a question of philosophy either. All these things, indeed, belong to that order of knowledge which we class as 'profane' or 'external', not from contempt, but because it is in fact nothing else; one is not called upon to consider whom one may happen to please or displease; one simply has to describe things as they are, giving to each thing the name and rank which normally belong to it. The fact that in the modern West 'sacred science' has been odiously caricatured by more or less conscious imposters is not a reason for keeping silent about it, or for ignoring, if not actually repudiating it; on the contrary, we declare unhesitatingly not only that it exists, but also that it is our sole preoccupation. Anyone who cares to refer to what we have already said elsewhere about the extravagances of the occultists and Theosophists\(^1\) will not fail to understand that we are alluding here to something of quite a different order and that the attitude of people of that kind also can never be regarded by us as anything but 'profane'; moreover, they only make their case worse by pretending to a knowledge which is not theirs, and this is one of the principal reasons why we find it necessary to expose the absurdity of their pretended doctrines whenever the occasion presents itself.

From the preceding remarks it should also be clear that the doctrines we propose to discuss refuse to lend themselves, owing to their very nature, to any attempt at 'popularization'; it would be foolish to try 'to bring within everybody's reach'—to use a common phrase of our time—conceptions which can only come within the grasp of an elite, and to attempt to do so would be the surest way of distorting them. We have explained elsewhere what we mean by the intellectual elite, and what part it will be called upon to play if it ever comes to be formed in the West; while at the same time we have shown how a genuine and profound study of the Eastern doctrines is indispensable in preparing for its formation.\(^2\) It is in view of this work, the results of which no doubt will only make themselves felt after a long interval, that we believe it necessary to expound certain ideas for the benefit of those who are capable of assimilating certain ideas for the benefit of those who are capable of assimilating them, without however modifying or simplifying them after the fashion of the 'popularizers', which would be in flat contradiction with our avowed intentions. Indeed, it is not for the doctrine to abase and reduce itself to the level of the limited understanding of the many; it is for those who are capable of it to raise themselves to the understanding of the doctrine in its integral purity, and it is only in this way that a genuine intellectual elite can be formed. Among several persons who receive an identical teaching, each one understands and assimilates it more or less completely and profoundly according to the range of his own intellectual possibilities, and in this way selection, without which there could be no genuine hierarchy, comes about quite naturally. These questions have already been dealt with previously, but it was necessary to recall them before embarking upon a strictly doctrinal exposition; and the more unfamiliar they are to Western minds today, the more imperative it is to emphasize them.

GENERAL REMARKS ON THE VEDĀNTA

The Vedānta, contrary to an opinion widely held among orientalists, is neither a philosophy nor a religion, nor does it partake to a greater or lesser extent of the character of either. To deliberately consider this doctrine under these aspects is one of the gravest of errors, calculated to result in failure to understand anything about it from the outset; in fact one reveals oneself thereby as a complete stranger to the true character of Eastern thought, the modes of which are quite different from those of the West and cannot be included within the same categories. We have already explained in a previous work that religion, if one is not to extend the scope of this word beyond its just limits, is something wholly Western; the same term cannot be applied to Eastern doctrines without stretching its meaning to such a degree that it becomes quite impossible to give it any definition, even of the vaguest kind. As for philosophy, it also represents an exclusively Western point of view, one, moreover, much more external than the religious point of view and therefore still further removed from that of the subject we are about to study. As we said above, it is an essentially 'profane' kind of knowledge even when it is not purely illusory, and we cannot help thinking, particularly when we consider what philosophy has become in modern times, that its absence from a civilization is hardly a matter

1. A single exception can be made for the very special sense in which the word is used in reference to the 'Hermetic philosophy'; but it goes without saying that it is not this unusual sense that we at present have in mind, a sense which is moreover almost unknown to the moderns.
for regret. In a recent book a certain orientalist has asserted that ‘philosophy is philosophy everywhere,’ a statement which opens the door to undesirable assimilations of every kind, including those against which he himself quite justly protested on other occasions. That philosophy is to be found everywhere is just what we are at present contesting; and we decline to accept as ‘universal thought’ (to adopt a phrase of the same author) what is in reality but an extremely special mode of thought. Another historian of the Eastern doctrines, while in principle admitting the inadequacy and inexactitude of those Western terms which have been persistently imposed upon them, nevertheless declared that he could see no way of dispensing with such terms, and he made as free a use of them as any of his predecessors. This appears all the more surprising inasmuch as for our part we have never experienced the slightest need to resort to this philosophical terminology, which would still suffer from the disadvantage of being somewhat repellent and needlessly complicated, even if it were not wrongly applied, as is always the case under such circumstances. But we do not wish to embark at present upon the kind of discussions to which these questions might give rise; we were merely concerned with showing, by these examples, how difficult it is for some people to step outside the ‘classical’ framework within which their Western education has confined their thought from the outset.

To return to the Vedānta, it must be regarded in reality as a purely metaphysical doctrine, opening up truly unlimited possibilities of conception, and, as such, it can in no wise be contained within the more or less narrow framework of any system whatsoever. In this respect and without looking any further, one can observe a profound and irreducible difference, a difference of principle, distinguishing it from anything that Europeans include under the name of philosophy. Indeed, the avowed aim of all philosophical conceptions, especially among the moderns, who carry to extremes the individualist tendency and the resultant quest for originality at any price, is precisely to establish systems that are complete and definite, or in other words essentially relative and limited on all sides. Fundamentally, a system is nothing but a closed conception, the more or less narrow limits of which are naturally determined by the ‘mental horizon’ of its author. But all systematization is absolutely impossible in pure metaphysics, where everything belonging to the individual order is truly non-existent, metaphysics being entirely detached from all relativities and contingencies, philosophical or otherwise. This is necessarily so, because metaphysics is essentially knowledge of the Universal, and such knowledge does not permit of being enclosed within any formula, however comprehensive.

The diverse metaphysical and cosmological conceptions of India are not, strictly speaking, different doctrines, but only developments of a single doctrine according to different points of view and in various, but by no means incompatible, directions. Besides, the Sanskrit word ārshana, which is attached to each of these conceptions, properly signifies ‘view’ or ‘point of view’, for the verbal root āra, whence it is derived, has as its primary meaning that of ‘seeing’; it cannot in any way denote ‘system’, and if orientalists translate it thus, that is merely the result of Western habits of thought which lead them into false assimilations at every step. Seeing nothing but philosophy everywhere, it is only natural that they should also see systems wherever they go.

The single doctrine to which we have just alluded is represented essentially by the Veda, that is to say, the sacred and traditional Science in its integrality, for this precisely is the proper meaning of that term. It furnishes the principle and the common basis of all the more or less secondary and derivative branches which go to make up those diverse conceptions in which certain people have seen so many rival and opposed systems. In reality, these conceptions, insofar as they are in accord with their principle, obviously cannot contradict one another; on the contrary, they are bound mutually to complete and elucidate each other. Moreover, there is no need to read into this statement the suggestion of a more or less artificial and belated ‘syncretism’, for the entire doctrine must be considered

2. The root vid, from which Veda and vidyā are derived, bears the twofold meaning of ‘seeing’ (videre in Latin) and ‘knowing’ (as in the Greek θέω): sight is taken as a symbol of knowledge because it is its chief instrument within the sensible order; and this symbolism is carried even into the purely intellectual realm, where knowledge is likened to ‘inward vision’, as is implied by the use of such words as ‘intuition’ for example.
as being synthetically comprised within the \textit{Veda}, and that from its origin. Tradition, in its integrity, forms a perfectly coherent whole, which however does not mean to say a systematic whole; and since all the points of view which it comprises can as well be considered simultaneously as in succession, there cannot be any real object in enquiring into the historical order in which they may actually have been developed and rendered explicit, even apart from the fact that the existence of oral transmission, probably lasting over a period of indefinite duration, would render any proposed solution quite misleading. Though the exposition may be modified to a certain degree externally in order to adapt itself to the circumstances of this or that period, it is nonetheless true that the basis of tradition always remains exactly the same, and that these external modifications in no wise reach or affect the essence of the doctrine.

The concordance of a conception with the fundamental principle of the tradition is the necessary and sufficient condition of its orthodoxy, which term must however on no account be taken in this instance merely according to its religious mode; it is necessary to stress this point in order to avoid any error in interpretation, because in the West there is generally no question of orthodoxy except as viewed from the purely religious standpoint. In everything that concerns metaphysics or that proceeds more or less directly from it, the heterodoxy of a conception is fundamentally not different from its falsity, resulting from its disagreement with the essential principles. Since these are contained in the \textit{Veda}, it follows that it is agreement with the \textit{Veda} that constitutes the criterion of orthodoxy. Heterodoxy is found, therefore, at that point where contradiction with the \textit{Veda} arises; whether voluntary or involuntary, it indicates a more or less far-reaching deviation or alteration of the doctrine, which moreover generally occurs only within somewhat restricted schools and can only affect special points, sometimes of very secondary importance, the more so since the power inherent in the tradition has the effect of limiting the scope and bearing of individual errors, of eliminating those which exceed certain bounds, and, in any case, of preventing them from becoming widespread and acquiring real authority. Even where a partially heterodox school has become to a certain extent representative of a \textit{darshana}, such as

the Atomist school in the case of the \textit{Vaisheshika}, no slur is cast on the legitimacy of that \textit{darshana} in itself; for it to remain within the bounds of orthodoxy it is only necessary to reduce it again to its truly essential content. On this point we cannot do better than quote by way of general indication this passage from the \textit{Sāṅkhya-Pravachana-Bhashya} of Viśnū- Bhikshu:

\begin{quote}
In the doctrine of Kaṇḍa [the \textit{Vaisheshika}] and in the \textit{Sāṅkhya} [of Kapila], the portion which is contrary to the \textit{Veda} must be rejected by those who adhere strictly to the orthodox tradition; in the doctrine of Jaimini and that of Vyāsa [the two \textit{Mimāṃsās}], there is nothing which is not in accordance with the Scriptures [considered as the basis of that tradition].
\end{quote}

The name \textit{Mimāṃsā}, derived from the verbal root \textit{man}, 'to think', in its iterative form, denotes the reflective study of the 'Sacred Science': it is the intellectual fruit of meditation on the \textit{Veda}. The first \textit{Mimāṃsā} (\textit{Pīrva-Mimāṃsā}) is attributed to Jaimini; but we must recall in this connection that the names which are thus attached to the formulation of the different \textit{darshanas} cannot be related in any way to particular individuals: they are used symbolically to describe what are really 'intellectual groupings', composed of all those who have devoted themselves to one and the same study over the course of a period the duration of which is no less indeterminable than the date of its beginning. The first \textit{Mimāṃsā} is also called \textit{Karma-Mimāṃsā} or practical \textit{Mimāṃsā} because it is concerned with actions, and, more particularly, with the accomplishment of rites. The word \textit{karma} indeed possesses a double meaning: in a general sense, it means action in all its forms; in a special and technical sense, it means ritual action, such as is prescribed by the \textit{Veda}. This practical \textit{Mimāṃsā} has for its aim, as the commentator Somanātha says, 'to determine in an exact and precise manner the sense of the Scriptures,' but chiefly insofar as they include precepts, and not in respect of pure knowledge or \textit{jñāna}, which is often placed in opposition to \textit{karma}, an opposition corresponding precisely to the distinction between the two \textit{Mimāṃsās}.

The second \textit{Mimāṃsā} (\textit{Uttara-Mimāṃsā}) is attributed to Vyāsa, that is to say to the 'collective entity' which arranged and finally
codified the traditional texts constituting the Veda itself. This attribution is particularly significant, for it is easy to see that it is, not a historical or legendary person with whom we are dealing in this instance, but a genuine 'intellectual function'; amounting, one may say, to a permanent function, since Vyāsa is described as one of the seven Chiranjīvīs, literally 'beings endowed with longevity', whose existence is not confined to any particular epoch.3 To describe the second Mimāṃsā in relation to the first, one may regard it as belonging to the purely intellectual and contemplative order. We cannot say theoretical Mimāṃsā by way of symmetry with practical Mimāṃsā, because this description would give rise to ambiguity. Although the word 'theory' is indeed etymologically synonymous with contemplation, it is nonetheless true that in current speech it has come to convey a far more restricted meaning; in a doctrine which is complete from the metaphysical point of view, theory, understood in this ordinary sense, is not self-sufficient, but is always accompanied or followed by a corresponding 'realization', of which it is, in short, but the indispensable basis, and in view of which it is ordained, as the means in view of the end.

The second Mimāṃsā is further entitled Brahma-Mimāṃsā as being essentially and directly concerned with 'Divine Knowledge' (Brahma-Vidya). It is this which constitutes the Vedānta strictly speaking, that is to say, according to the etymological significance of that term, the 'end of the Veda', based principally upon the teaching contained in the Upanishads. This expression 'end of the Veda' should be understood in the double sense of conclusion and of aim. On the one hand, the Upanishads do in fact form the last portion of the Vedic texts, and, on the other hand, that which is taught therein, insofar at least as it can be taught, is the final and supreme aim of traditional knowledge in its entirety, detached from all the more or less particular and contingent applications derivable from it.

3. Something similar is to be found in other traditions: thus in Taoism they speak of eight 'immortals'; elsewhere we have Melchizedek, who is 'without father, without mother, without descent, having neither beginning of days, nor end of life' (Heb. 7:3); and it would probably be easy to discover yet other parallelisms of a similar kind.

other words, with the Vedānta, we find ourselves in the domain of pure metaphysics.

The Upanishads, forming an integral part of the Veda, are one of the very foundations of the orthodox tradition, a fact which has not prevented certain orientalists, such as Max Müller, from professing to detect in them the germs of a Buddhism interpreted after the modern fashion, that is to say of heterodoxy; such a statement obviously amounts to a contradiction in terms, and it would assuredly be difficult to carry misunderstanding further. One cannot insist too strongly on the fact that it is the Upanishads which here represent the primordial and fundamental tradition and consequently constitute the Vedānta in its essence; it follows from this that in a case of doubt as to the interpretation of the doctrine, it is always to the authority of the Upanishads that it is necessary to appeal in the last resort.

The principal teachings of the Vedānta, as extracted expressly from the Upanishads, have been coordinated and synthetically formulated in a collection of aphorisms known either as the Brahma-Sūtras or the Śārtrāka-Mimāṃsā;4 the author of these aphorisms, who is called Bādarāyana and Krishna-Dwaipayana, is identified with Vyāsa. It is important to note that the Brahma-Sūtras belong to the class of traditional writings called smriti, while the Upanishads, like all the other Vedic texts, form part of shruti; but the authority of smriti is derived from that of shruti, on which it is based. Shruti is not 'revelation' in the religious and Western sense of the word, as most orientalists would have it, who, here again, confuse two very different points of view; it is the fruit of direct inspiration, so that it is in its own right that it holds its authority. Shruti, says Shankarachārya,

is a means of direct perception [in the sphere of transcendent knowledge], since, in order to be an authority it is necessarily independent of all other authority; while smriti plays a part that

4. The term Śārtrāka has been interpreted by Rāmānuja in his commentary (Shri-Bhāṣya) on the Brahma-Sūtras 1.1.13 as referring to the 'Supreme Self' (Parāmatmā) which is in a sense, 'incorporated' (sharīra) in all things.
is analogous to induction, in that it derives its authority from an authority other than itself.\textsuperscript{5}

But to avoid any misunderstanding as to the force of the analogy thus indicated between transcendent and sensory knowledge, it is necessary to add that, like every true analogy, it must be applied inversely;\textsuperscript{6} thus, while induction rises above sensible perception and permits one to pass on to a higher level, it is on the contrary direct perception or inspiration alone which, in the transcendent order, attains the Principle itself, to what is highest, after which nothing remains but to draw the consequences and to determine the manifold applications. It may further be said that the distinction between shruti and smriti is, fundamentally, equivalent to that between immediate intellectual intuition and reflective consciousness; if the first is described by a word bearing the primitive meaning of 'hearing', this is precisely in order to indicate its intuitive character, and because according to the Hindu cosmological doctrine sound holds the primordial rank among sensible qualities. As for smriti, its primitive meaning is 'memory': in fact, memory, being but a reflex of perception, can be taken as denoting, by extension, everything which possesses the character of reflective or discursive, that is to say, of indirect knowledge. Moreover, if knowledge is symbolized by light, as is most often the case, pure intelligence and recollection, otherwise the intuitive faculty and the discursive faculty, can be respectively represented by the sun and the moon. This symbolism, which we cannot enlarge upon here, is capable of numerous applications.\textsuperscript{7}

\textsuperscript{5} In Hindu logic, perception (pratyaksha) and induction or inference (anumāna) are the two 'means of proof' (pramānas) that can be legitimately employed in the realm of sensible knowledge.

\textsuperscript{6} In the Hermetic tradition, the principle of analogy is expressed by the following sentence from the Emerald Table: 'That which is below is like that which is above, and that which is above is like that which is below'; but in order to understand this formula and apply it correctly it is necessary to refer it to the symbol of 'Solomon's Seal', made up of two superposed triangles pointing opposite ways.

\textsuperscript{7} Traces of this symbolism are to be detected even in speech: for example, it is not without reason that the same root man or men has served, in various languages, to form numerous words denoting at one and the same time the moon, memory, the 'mental faculty' or discursive thought, and man himself insofar as he is specifically a 'rational being'.

The Brahma-Sūtras, the text of which is extremely concise, have given rise to numerous commentaries, the most important of which are those by Shankarāchārya and Rāmacānuja; they are, both of them, strictly orthodox, so that we must not exaggerate the importance of their apparent divergences, which are in reality more in the nature of differences of adaptation. It is true that each school is naturally enough inclined to think and to maintain that its own point of view is the most worthy of attention and ought, while not excluding other views, nevertheless to take precedence over them. But in order to settle the question in all impartiality one has but to examine these points of view in themselves and to ascertain how far the horizon extends which they embrace respectively; it is, moreover, self-evident that no school can claim to represent the doctrine in a total and exclusive manner. It is nevertheless quite certain that Shankarāchārya's point of view goes deeper and further than that of Rāmacānuja; one can, moreover, infer this from the fact that the first is of Shaivite tendency while the second is clearly Vaishnavite. A curious argument has been raised by Thibaut, who translated the two commentaries into English: he suggests that that of Rāmacānuja is more faithful to the teaching of the Brahma-Sūtras but at the same time recognizes that that of Shankarāchārya is more in conformity with the spirit of the Upanishads. In order to be able to entertain such an opinion it is obviously necessary, to maintain that there exist doctrinal differences between the Upanishads and the Brahma-Sūtras; but even were this actually the case, it is the authority of the Upanishads which must prevail, as we have explained above, and Shankarāchārya's superiority would thereby be established, although this was probably not the intention of Thibaut, for whom the question of the intrinsic truth of the ideas concerned hardly seems to arise. As a matter of fact, the Brahma-Sūtras, being based directly and exclusively on the Upanishads, can in no way be divergent from them; only their brevity, rendering them a trifle obscure when they are isolated from any commentary, might provide some excuse for those who maintain that they find in them.
something besides an authoritative and competent interpretation of the traditional doctrine. Thus the argument is really pointless, and all that we need retain is the observation that Shankarachārya has deduced and developed more completely the essential contents of the Upanishads: his authority can only be questioned by those who are ignorant of the true spirit of the orthodox Hindu tradition, and whose opinion is consequently valueless. In a general way, therefore, it is his commentary that we shall follow in preference to all others.

To complete these preliminary observations we must again make it clear, although we have already explained this elsewhere, that it is incorrect to apply the label 'Esoteric Brāhmaṇism' to the teachings of the Upanishads, as some have done. The inadmissibility of this expression arises especially from the fact that the word 'esoterism' is a comparative, and that its use necessarily implies the correlative existence of an 'exoterism'; but such a division cannot be applied to the doctrine in question. Exoterism and esoterism, regarded not as two distinct and more or less opposed doctrines, which would be quite an erroneous view, but as the two aspects of one and the same doctrine, existed in certain schools of Greek antiquity; there is also a clear example of this relationship to be met with in the Islamic tradition, but the same does not apply in the case of the more purely Eastern doctrines. In their case one can only speak of a kind of 'natural esoterism' such as inevitably pertains to every doctrine, especially in the metaphysical sphere, where it is important always to take into account the inexpressible, which is indeed what matters most of all, since words and symbols, all told, serve no purpose beyond acting as aids to conceiving it, by providing 'supports' for a task which must necessarily remain a strictly personal one. From this point of view, the distinction between exoterism and esoterism would amount to no more than the distinction between the 'letter' and the 'spirit'; and one could also apply it to the plurality of meanings of greater or lesser depth contained in the traditional texts or, if preferred, the sacred scriptures of all races. On the other hand, it goes without saying that the same teaching is not understood in an equal degree by all who receive it: among such persons there are therefore those who in a certain sense discern the esoterism, while others, whose intellectual horizon is narrower, are limited to the

exoterism; but this is not how people who talk about 'Esoteric Brāhmaṇism' understand that expression. As a matter of fact, in Brāhmaṇism, the teaching is accessible in its entirety to all those who are intellectually 'qualified' (adhiṅkāri), that is, capable of deriving a real advantage from it; and if there are doctrines reserved for a chosen few, it is because it cannot be otherwise where instruction is allotted with discretion and in accordance with the real capacities of men. Although the traditional teaching is not esoteric in the strict sense of the word, it is indeed 'initiatic', and it differs profoundly in all its methods from that 'profane' education which the credulity of modern Westerners so strangely overrates: this we have already pointed out when speaking of 'sacred science' and of the impossibility or 'popularizing' it.

This last observation prompts us to a further remark. In the East the traditional doctrines always employ oral teaching as their normal method of transmission, even in cases where they have been formulated in written texts; there are profound reasons for this, because it is not merely words that have to be conveyed, but above all it is a genuine participation in the tradition which has to be assured. In these circumstances, it is meaningless to say, with Max Müller and other orientalists, that the word 'Upanishad' denotes knowledge acquired 'by sitting at the feet of a teacher'; this title, if such were the meaning, would then apply without distinction to all parts of the Veda; moreover, it is an interpretation which has never been suggested or admitted by any competent Hindu. In reality, the name of the Upanishads denotes that they are ordained to destroy ignorance by providing the means of approach to supreme Knowledge; and if it is solely a question of approaching, then that is because the supreme Knowledge is in its essence strictly incommunicable, so that none can attain to it save by himself alone.

Another expression which seems to us even more unhappy than 'Esoteric Brāhmaṇism' is 'Brāhmaṇic Theosophy', which has been used by Oltramare; and he indeed admits that he did not adopt it without hesitation, since it seems to 'justify the claims of Western Theosophists' to have derived their sanction from India, claims which he perceives to be ill-founded. It is true that we must certainly avoid anything which might lend countenance to certain most
undesirable confusions; but there are still graver and more decisive reasons against admitting the proposed designation. Although the self-styled Theosophists of whom Oltramare speaks are almost completely ignorant of the Hindu doctrines, and have derived nothing from them but a terminology which they use entirely at random, they have no connection with genuine theosophy either, not even with that of the West; and this is why we insist on distinguishing carefully between 'theosophy' and 'Theosophism'.

But leaving Theosophism aside, it can still be said that no Hindu doctrine, or more generally still, no Eastern doctrine, has enough points in common with theosophy to justify describing it by that name; this follows directly from the fact that the word denotes exclusively conceptions of mystical inspiration, therefore religious and even specifically Christian ones. Theosophy is something peculiarly Western; why seek to apply this same word to doctrines for which it was never intended, and to which it is not much better suited than are the labels of the philosophical systems of the West? Once again, it is not with religion that we are dealing here, and consequently there can be any question of theosophy any more than of theology; these two terms, moreover, began by being almost synonymous although, for purely historical reasons, they have come to assume widely differing acceptations.

It will perhaps be objected that we have ourselves just made use of the phrase 'Divine Knowledge', which is equivalent, after all, to the original meaning of the words 'theosophy' and 'theology'. This is true, but, in the first place, we cannot regard the last-named terms exclusively from an etymological standpoint, for they are among those with reference to which it has by now become quite impossible to ignore the changes of meaning which long usage has brought about. Moreover, we readily admit that this term 'Divine Knowledge' is not itself entirely adequate; but owing to the unsuitability of European languages for the purpose of expressing purely metaphysical ideas, there was no better expression available. Besides, we do not think that there are any serious objections to its use, since we have already been careful to warn the reader not to apply a religious shade of meaning to it, such as it must almost inevitably bear when related to Western conceptions. All the same, a certain ambiguity might still remain, for the Sanskrit term which can be least inaccurately rendered by 'God' is not Brähma, but Ishvara. However, the adjective 'divine', even in current speech, is used less strictly, more vaguely perhaps, and therefore lends itself better to such a transposition as we make here than the substantive whence it was derived. The point to note is that such terms as 'theology' and 'theosophy', even when regarded etymologically and apart from all intervention of the religious point of view, can only be translated into Sanskrit as Ishvara-Vidyā; on the other hand, what we render approximately as 'Divine Knowledge', when dealing with the Vedānta is Brähma-Vidyā, for the purely metaphysical point of view essentially implies the consideration of Brähma or the Supreme Principle, of which Ishvara, or the 'Divine Personality', is merely a determination, as Principle of, and in relation to, universal Manifestation. The consideration of Ishvara therefore already implies a relative point of view; it is the highest of the relativities, the first of all determinations, but it is nonetheless true that it is 'qualified' (saguna) and 'conceived distinctively' (savishesha), whereas Brähma is 'unqualified' (nirguna), 'beyond all distinctions' (nirvishesha), absolutely unconditioned, universal manifestation in its entirety being strictly nil beside Its Infinity. Metaphysically, manifestation can only be considered from the point of view of its dependence upon the Supreme Principle and in the quality of a mere 'support' for raising oneself to transcendent Knowledge; or again, taking things in inverse order, as an application of the principal Truth. In any case, nothing more should be looked for in everything pertaining thereto.
than a kind of ‘illustration’ ordained to facilitate the understanding of the Unmanifested, the essential object of metaphysics, thus permitting, as we explained when interpreting the title of the *Upanishads*, of an approach being made to Knowledge unqualified.\textsuperscript{10}

---

10. For a fuller account of all these preliminary questions, which have had to be treated in rather summary fashion in the present chapter, we would refer the reader to our *Introduction to the Study of the Hindu Doctrines*, where these matters form the main subject of study and have been discussed in greater detail.

---

2  

**FUNDAMENTAL DISTINCTION BETWEEN ‘SELF’ AND ‘EGO’**

In order to understand thoroughly the teaching of the *Vedânta* as it pertains to the human being, it is essential to define from the start, as clearly as possible, the fundamental distinction between the ‘Self’ [*Sat*], which is the very principle of the being, and the individual ‘ego’ [*maï*]. It is hardly necessary to explain that the use of the term ‘Self’ does not imply on our part any identity of view with certain schools that may have used this word, but that, under an Eastern terminology, generally misunderstood, have never set forth any but purely Western views, highly fantastic at that; we are alluding here not only to Theosophism, but also to certain pseudo-oriental schools which have entirely distorted the *Vedânta* under the pretext of adapting it to the Western mentality. The misuse which may have been made of a word does not, in our opinion, provide adequate grounds for declining to employ it, except where it is possible to replace it by another word equally well suited to express the same meaning, which is not the case in this instance; besides, too great a strictness on this score would undoubtedly leave very few terms indeed at one’s disposal, especially as there exist hardly any which at one time or another have not been misapplied by some philosopher. The only words which we intend to reject are those invented deliberately to express views which have nothing in common with what we are expounding: such, for example, are the names of the different kinds of philosophical systems; such, also, are
the terms which belong specifically to the vocabulary of the occultists and other ‘neo-spiritualists’; as for terms which the last-named have merely borrowed from earlier doctrines which they habitually and shamelessly plagiarize without understanding anything about them, obviously we need have no scruples about employing such words, while at the same time restoring the meaning which normally belongs to them.

In place of the terms ‘Self’ and ‘ego’, we may also use those of ‘personality’ and ‘individuality’, with one reservation however for the ‘Self’, as we shall explain later on, may denote something over and above the personality. The Theosophists, who seem to have taken a delight in confusing their terminology, interpret the personality and the individuality in a sense which is the exact opposite of that in which they should rightly be understood; it is the first which they identify with the ‘ego’, and the second with the ‘Self’. Previously, on the contrary, even in the West, whenever any distinction has been made between these two terms, the personality has always been regarded as superior to the individuality, and that is why we say that this is their normal relationship, which there is every reason to retain. Scholastic philosophy, in particular, has not overlooked this distinction, but it does not seem to have grasped its full metaphysical significance, nor to have extracted the most profound consequences which follow from it; this is moreover what often occurs, even on occasions where Scholasticism shows the most remarkable similarity with certain portions of the Eastern doctrines. In any case, the personality, metaphysically speaking, has nothing in common with what modern philosophers so often call the ‘human person’, which is, in fact, nothing but the individuality pure and simple; besides, it is this alone and not the personality which can strictly be called human. In a general way, it appears that Westerners, even when they attempt to carry their views further than those of the majority, mistake for the personality what is actually the superior part of the individuality, or a simple extension of it:¹ in these circumstances everything of the purely metaphysical order necessarily remains outside their comprehension.

The ‘Self’ is the transcendent and permanent principle of which the manifested being, the human being, for example, is only a transient and contingent modification, a modification which, moreover, can in no way affect the principle, as will be explained more fully in what follows. The ‘Self’, as such, is never individualized and cannot become so, for since it must always be considered under the aspect of the eternity and immutability which are the necessary attributes of pure Being, it is obviously not susceptible of any particularization, which would cause it to be ‘other than itself’. Immutable in its own nature, it merely develops the indefinite possibilities which it contains within itself, by a relative passing from potency to act through an indefinite series of degrees. Its essential permanence is not thereby affected, precisely because this process is only relative, and because this development is, strictly speaking, not a development at all, except when looked at from the point of view of manifestation, outside of which there can be no question of succession, but only of perfect simultaneity, so that even what is virtual under one aspect, is found nevertheless to be realized in the ‘eternal present’. As regards manifestation, it may be said that the ‘Self’ develops its manifold possibilities, indefinite in their multitude, through a multiplicity of modalities of realization, amounting, for the integral being, to so many different states, of which states one alone, limited by the special conditions of existence which define it, constitutes the portion or rather the particular determination of that being which is called human individuality. The ‘Self’ is thus the principle by which all the states of the being exist, each in its own domain; and this must be understood not only of the manifested states of which we have just been speaking, whether individual like the human state or supra-individual, but also—although the word

¹. Leon Daudet in certain of his works (L’Herède and Le Monde des Images) has distinguished in the human being between what he calls ‘self’ (soi) and ‘ego’ (moi); but both of these, as he conceives them, are for us equally included in the individuality and fall entirely within the scope of psychology, which, whatever he may have supposed, is quite incapable of extending its sway so far as to include the personality; however, the fact of having tried to establish such a distinction indicates a kind of presentiment which deserves to be pointed out as remarkable in an author who had no pretensions to be called a metaphysician.
‘exist’ then becomes inappropriate—of the unmanifested state, comprising all the possibilities which are not susceptible of any manifestation, as well as the possibilities of manifestation themselves in principal mode; but the ‘Self’ derives its being from itself alone, and neither has nor can have, in the perfect and indivisible unity of its nature, any principle which is external to it.2

The ‘Self’, considered in this manner in relation to a being, is properly speaking the personality; it is true that one might restrict the use of this latter word to the ‘Self’ as principle of the manifested states, just as the ‘Divine Personality’, Ishvara, is the Principle of universal Manifestation; but one can also extend it analogically to the ‘Self’ as principle of all the states of the being, both manifested and unmanifested. The personality is an immediate determination, primordial and non-particularized, of the principle which in Sanskrit is called Ātmā or Paramātmā, and which, in default of a better term, we may call the ‘Universal Spirit’, on the clear understanding, however, that in this use of the word ‘spirit’ nothing is implied which might recall Western philosophical conceptions, and, in particular, that it is not turned into a correlative of ‘matter’, as the modern mind is inclined to do, being subject in this respect, even though unconsciously, to the influence of Cartesian dualism.3

And let it be repeated once more in this connection that genuine metaphysics lies quite outside all the oppositions of which that existing between ‘spiritualism’ and ‘materialism’ affords us the type, and that it is in no way required to concern itself with the more or less special and often quite artificial questions to which such oppositions give rise.

Ātmā permeates all things, which are, as it were, its accidental modifications, and according to Rāmānuja’s expression, ‘constitute in some sort its body [this word being taken here in a purely analogical sense], be they moreover of an intelligent or non-intelligent nature,’ that is, according to Western conceptions, ‘spiritual’ as well as ‘material’, for that distinction, implying merely a diversity of conditions in manifestation, makes no sort of difference in respect of the unconditioned and unmanifested Principle. This, in fact, is the ‘Supreme Self’ (the literal rendering of Paramātmā) of all that exists, under whatever mode, and it abides ever the same through the indefinite multiplicity of the degrees of Existence, understood in the universal sense, as well as beyond Existence, that is, in principal non-manifestation.

The ‘Self’, in relation to any being whatsoever, is in reality identical with Ātmā, since it is essentially beyond all distinction and all particularization; and that is why, in Sanskrit, the same word ātman, in cases other than the nominative, replaces the reflexive pronoun ‘itself’. The ‘Self’ is not therefore really distinct from Ātmā, except when one considers it particularly and ‘distinctively’ in relation to a being, or, more accurately, in relation to a certain definite state of that being, such as the human state, and insofar as one considers it from this special and limited point of view alone. In this case, moreover, the ‘Self’ does not really become distinct from Ātmā in any way, since as we said above, it cannot be ‘other than itself’, and obviously cannot be affected by the point of view from which we regard it, any more than by any other contingency. What should be noted is that to the extent that we make this distinction, we are departing from the direct consideration of the ‘Self’ in order to consider its reflection in human individuality or in some other state of the being, for, needless to say, when confronted with the ‘Self’, all states of manifestation are strictly equivalent and can be regarded in the same way; but just now it is the human individuality which more particularly concerns us. The reflection in question determines what may be called the center of this individuality; but if isolated from its principle, that is, from the ‘Self’, it can only enjoy

2. It is our intention to set forth more completely in other works the metaphysical theory of the being’s multiple states; here we need only touch on those aspects of that theory that are indispensable to an understanding of the constitution of the human being. [Guénon later published a separate work on this theory, entitled The Multiple States of the Being. See also The Symbolism of the Cross, Ed.]

3. In theology, when it is declared that ‘God is pure spirit’ it is reasonable to suppose that this statement must likewise not be taken in the sense of ‘spirit’ as opposed to ‘matter’, that is to say according to the sense in which the two terms have no meaning except in reference to one another; to understand it in this way would amount to accepting a kind of ‘demiurgic’ conception, more or less akin to the theories attributed to the Manicheans. It is nonetheless true to say that such an expression is of a kind that readily lends itself to false interpretations, leading to the substitution of ‘a being’ for pure Being.
a purely illusory existence, for it is from that principle that it derives all its reality, and it effectually possesses this reality only through participation in the nature of the 'Self', that is, insofar as it is identified therewith by universalization.

The personality, let us insist once more, belongs essentially to the order of principles in the strictest sense of the word, that is, to the universal order; it cannot therefore be considered from any point of view except that of pure metaphysics, which has precisely the Universal for its domain. The pseudo-metaphysicians of the West are in the habit of confusing with the Universal things which, in reality, pertain to the individual order; or rather, as they have no conception at all of the Universal, that to which they fallaciously apply this name is usually the general, which is properly speaking a mere extension of the individual. Some carry the confusion still further; the 'empiricist' philosophers, who cannot even conceive the general, identify it with the collective, which by right belongs to the particular order only; and by means of these successive degradations they end by reducing all things to the level of sensory knowledge, which many indeed regard as the only kind of knowledge possible, because their mental horizon does not extend beyond this domain and because they wish to impose on everybody else the limitations which are the effect of their own incapacity, whether inborn or acquired through a particular form of education.

To forestall any misunderstandings of the kind just described and in order to avoid tedious repetition, we will here, once and for all, provide the following table, which sets forth the essential distinctions in this connection, and to which we ask our readers to refer whenever necessary:

<table>
<thead>
<tr>
<th>Universal</th>
<th>The Unmanifested</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual</td>
<td>Formless Manifestation</td>
</tr>
<tr>
<td></td>
<td>Subtle state</td>
</tr>
<tr>
<td></td>
<td>Gross state</td>
</tr>
</tbody>
</table>

It is important to add that the distinction between the Universal and the individual must not be regarded as a correlation, for the second of these two terms, being strictly annulled in respect of the first, cannot in any way be opposed to it. The same is true with regard to the unmanifested and the manifested. Moreover, it might at first sight appear that the Universal and the unmanifested should coincide, and from a certain point of view their identification would in fact be justified, since, metaphysically, it is the unmanifested which is the all-essential. However, account must be taken of certain states of manifestation which, being formless, are from that very fact supra-individual; if, therefore, we only distinguish between the Universal and the individual we shall be forced to assign these states to the Universal, which we are the better able to do inasmuch as it is a question of a manifestation which is still in a way principial, at least by comparison with individual states; but this, it should be clearly understood, must not lead us to forget that everything manifested, even at this higher level, is necessarily conditioned, that is to say relative. If we regard things in this manner, the Universal will no longer consist solely of the unmanifested, but will also extend to the formless, comprising both the unmanifested and the supra-individual states of manifestation. As for the individual, it includes all degrees of formal manifestation, that is, all states in which beings are invested with forms, for what properly characterizes individuality and essentially constitutes it as such is precisely the presence of form among the limitative conditions which define and determine a given state of existence. We can now sum up these further considerations in the following table:
in its integral development. As to the 'subtle state', it includes, in the first place, the extra-corpooreal modalities of the human being, or of every other being situated in the same state of existence, and also, in the second place, all other individual states. It is therefore evident that these two terms are not truly symmetrical and cannot even have any common measure, since one of them represents only a portion of one out of the indefinite multiplicity of states which constitute formal manifestation, while the other includes all the remainder of this manifestation. 4 Symmetry up to a certain point is to be found provided that we restrict ourselves to the consideration of the human individuality alone, and it is, moreover, from this point of view that the distinction in question is in the first place established by the Hindu doctrine. Even if one afterwards transcends this point of view, or even if it has only been entertained with the ulterior object of transcending it effectively, it remains nevertheless true that it must inevitably be taken as a basis and term of comparison, since it relates to the state in which we actually find ourselves at the present moment.

It may be said, therefore, that the human being, considered in its integrality, comprises a certain sum of possibilities which constitute its corporeal or gross modality, and in addition, a multitude of other possibilities, which, extending in different directions beyond the corporeal modality, constitute its subtle modalities; but all these possibilities together represent, nonetheless, one and the same degree of universal Existence. It follows from this that human individuality is at once much more and much less than Westerners generally suppose it to be: much more, because they recognize in it scarcely anything except the corporeal modality, which includes but the smallest fraction of its possibilities; much less, however, because this individuality, far from really constituting the whole being, is but one state of that being among an indefinite multitude of other states. Moreover the sum of all these states is still nothing at all in relation to the personality, which alone is the true being, because it alone represents its permanent and unconditioned state, and because there is nothing else which can be considered as absolutely real. All the rest is, no doubt, real also, but only in a relative way, by reason of its dependence upon the Principle and insofar as it reflects it in some degree, as the image reflected in a mirror derives all its reality from the object it reflects and could enjoy no existence apart from it; but this lesser reality, which is only participative, is illusory in relation to the supreme Reality, as the image is also illusory in relation to the object; and if we should attempt to isolate it from the Principle, this illusion would become a pure and simple non-entity. We thus observe that existence, that is to say conditioned and manifested being, is at once real in one sense and illusory in another; and this is one of the essential points which Western writers, who have distorted the Vedanta by their erroneous and highly prejudiced interpretations, have failed to grasp.

We must furthermore warn philosophers more especially that the Universal and the individual are by no means for us what they call 'categories'; and we will recall to mind—for the more modern interpretations, have failed to grasp.

4. This asymmetry can be made more intelligible by applying to it a well established observation of ordinary logic: whenever an attribution or quality of any kind is considered, all possible things are automatically divided into two groups, namely, on the one hand, things endowed with this quality, and, on the other hand, things devoid of it; but while the first named group is found to be thus positively defined and determined, the second, which is only characterized in a wholly negative manner, is in no wise limited thereby and is in reality indefinite. Thus, there is neither symmetry nor any common measure between the two groups, which do not really constitute a twofold division, since their distinction holds good merely from the special point of view of a certain quality taken as a starting-point; the second group possesses no homogeneity and may include things having nothing in common with one another, which however does not rob this division of its validity under the original terms of reference. Now it is precisely in this manner that the manifested can be distinguished from the unmanifested; so also, within the manifested, a similar distinction can be made between the formal and the formless and lastly, within the realm of form itself, between the corporeal and incorporeal.
mistake to suppose that they constitute the whole of the Universal or even that they are the most important consideration in pure metaphysics; they are co-extensive with Being, but they do not transcend Being, at which point, moreover, the doctrine in which they are thus considered stops short. Although 'ontology' does indeed pertain to metaphysics, it is very far from constituting metaphysics in its entirety, for Being is not the Unmanifest in itself, but only the principle of manifestation; consequently, that which is beyond Being is, metaphysically, much more important than Being itself. In other words, it is Brahma and not Ishvara which must be recognized as the Supreme Principle. This is declared expressly and above all by the Brahma-Sūtras, which open with these words: 'Now begins the study of Brahma,' to which Shankarachārya adds the following commentary:

This first śūtra, while enjoining the quest of Brahma, advises a reflective study of the texts of the Upanishads carried out with the aid of a dialectic which [taking them as its basis and principle] is never in disagreement with them, and which, like them [but only in the capacity of simple auxiliary means], envisages 'Deliverance' as the goal.
That is why it is said that it is Brahma which dwells in the vital center of the human being; this is true of every human being, not only of one who is actually 'united' or 'delivered'—these two words denoting the same thing viewed under two different aspects, the first in relation to the Principle, the second in relation to manifested or conditioned existence. This vital center is considered as corresponding analogically with the smaller ventricle (guha) of the heart (hridaya); but it must not be confused with the heart in the ordinary sense of the word, that is to say with the physiological organ bearing that name, since it is in reality the center not only of the corporeal individuality, but of the integral individuality, capable of indefinite extension in its own sphere (which occupies, moreover, but one degree of existence), and of which the corporeal modality constitutes only a portion, and indeed, as we have already stated, only a very limited portion. The heart is regarded as the center of life, and in fact, from the physiological point of view, it is so by reason of its connection with the circulation of the blood, with which vitality itself is essentially linked in a very special way, as all traditions are unanimous in recognizing; but it is further considered as a center on a higher plane and in a more symbolical sense, through its connection with the universal Intelligence (in the sense of the Arabic term Al-Aqlu) as related to the individual. It should be noted in this connection that the Greeks themselves, and Aristotle among others, assigned the same part to the heart, also making it the seat of intelligence, if one may so express it, and not of feeling as the moderns commonly do; the brain, in actual fact, is only the instrument of the mental faculty, that is, of thought in its reflective and discursive mode: and thus, in accordance with a symbolism which we have previously mentioned, the heart corresponds to the sun and the brain to the moon. It goes without saying, moreover, that in describing the center of the integral individuality as the heart, the greatest care should be taken not to regard what is merely an analogy as an identification; between the two there is strictly speaking a correspondence only, in which, it may be added, there is nothing arbitrary, but which is perfectly valid, although our contemporaries no doubt may be led by their habits of thought to disregard the profound reasons for such a thing.

In this seat of Brahma [Brahma-pura], that is to say, in the vital center of which we have just been speaking, there is a small lotus, a place in which is a small cavity [dahara] occupied by Ether [Akāśha]; we must seek That which is in this place, and we shall know It.2

That which, in fact, dwells at the center of the individuality is not merely the etheric element, the principle of the four other sensible elements, as might be supposed by those who confine themselves to its most external meaning, that relating to the corporeal world only. In the latter world, this element does in fact play the part of a principle, but in a wholly relative sense, inasmuch as this world is eminently relative, and it is precisely this acceptation which has to be analogically transposed. It is indeed only in the capacity of a 'support' for this transposition that Ether is mentioned here; the conclusion of the text expressly denotes this, since, if nothing more were really being referred to, there would obviously be nothing to seek. And it may further be added that the lotus and the cavity in question must also be regarded symbolically, for such a 'localization' is in no wise to be conceived literally once the point of view of corporeal individuality has been transcended, the other modalities being no longer subject to the spatial condition.

Nor is what we are at present considering merely the 'living soul' (jīvatmā), that is, the particularized manifestation of the 'Self' in life (jīva) and consequently in the human individual, viewed here more especially under the vital aspect which is one of the conditions of existence specifically determining the human individual state, and which applies moreover to the sum-total of modalities comprised in that state. Metaphysically, in fact, this manifestation should not be regarded separately from its Principle, which is the 'Self'; and although this appears as jīva in the sphere of individual existence, in illusory mode therefore, it is Ātmā in its supreme Reality.

This Ātmā, which dwells in the heart, is smaller than a grain of rice, smaller than a grain of barley, smaller than a grain of mustard, smaller than a grain of millet, smaller than the germ which

2. Chhāndogyā Upanishad viii. 1. 1.
is in the grain of millet; this Ātmā, which dwells in the heart, is also greater than the earth [the sphere of gross manifestation], greater than the atmosphere [the sphere of subtle manifestation], greater than the sky [the sphere of formless manifestation], greater than all the worlds together [that is, beyond all manifestation, being the unconditioned].

This is so, in fact, because analogy is necessarily applied in an inverse sense, as we have already pointed out, and just as the image of an object is inverted relative to that object, that which is first or greatest in the principal order is, apparently at any rate, last and smallest in the order of manifestation. To make a comparison with mathematics by way of clarification, it is thus that the geometrical point is quantitatively nil and does not occupy any space, though it is the principle by which space in its entirety is produced, since space is but the development of its intrinsic virtualities. Similarly,

3. Chhandogya Upanishad III.14.3. In this context one cannot help recalling the Gospel parable: 'The Kingdom of heaven is like a grain of mustard seed which a man took and sowed in his field; it is the smallest of all seeds, but when it has grown it is the greatest of shrubs and becomes a tree, so that the birds of the air come and make nests in its branches.' (Matt. 13:31-32). Though the point of view is certainly a different one, it is easy to understand how the conception of the 'Kingdom of Heaven' can be transposed metaphysically; the growing of the tree stands for the development of possibilities; and there is no single feature of the parable, even to the 'birds of the air', representing in this case the higher states of the being, which does not recall a similar symbolism occurring in another text of the Upanishads: 'Two birds, inseparably united companions, dwell in the same tree; the one eats of the fruit of the tree, while the other looks on without eating.' (Mundaka Upanishad III.1.1; Shvetāśvatara Upanishad IV.6). The first of the two birds is jīvātmā, who is involved in the realm of action and its consequences; the second is the unconditioned Ātmā, which is pure Knowledge; and if they are inseparably associated, this is because the former is only distinguishable from the latter in an illusory manner.

4. The same idea is very clearly expressed in the Gospel text, 'So the last will be first, and the first last.' (Matt. 20:16)

5. Even from a more external point of view, that of ordinary elementary geometry, the following observation can be made: by continuous displacement the point engenders the line, the line engenders the surface, and the surface engenders the solid; but in the contrary sense, a surface is the intersection of two solids, a line is the intersection of two surfaces, a point is the intersection of two lines.

6. In reality, however, it is the individual who dwells in the 'Self', and the being becomes effectively conscious of this when 'Union' is realized; but this conscious realization implies a freeing from the limitations that constitute individuality as such, and which, in a more general way, condition all manifestation. When it is said of the 'Self' that it is in a certain sense indwelling in the individual, this means that one has taken up the viewpoint of manifestation, and this is yet another example of application in an inverse sense.
which, in themselves, are eternally contained in the Principle, are transposed in terms of succession.

This Purusha, of the size of a thumb [angushtha-mātra, an expression which must not be taken literally as denoting a spatial dimension, but which refers to the same idea as the comparison with a grain], is of a clear luminosity like a smokeless fire [without any admixture of obscurity or ignorance]; it is the Lord of the past and of the future [being eternal, therefore omnipresent, in such wise that it contains in its permanent actuality all that appears as past or future relatively to any given moment of manifestation, a relationship that is, moreover, capable of transference beyond that particular mode of succession which is time proper]; it is today [in the actual state which constitutes the human individuality] and it will be tomorrow [and in all cycles or states of existence] such as it is [in itself, principally, to all eternity].

11. A comparison could also be made here with the 'endogeny of the Immortal', as it is taught by the Taoist tradition.

12. Katha Upanishad 11.4.12–13. In the Islamic esoteric doctrine the same idea is expressed, in almost identical terms, by Muhyi d-Din ibn al-'Arabi in his Treatise on Unity (Risalat-al-Ahadiyyah): 'He [Allah] is now such as He was [from all eternity] every day in the state of Sublime Creator.' The only difference concerns the idea of creation, which is only to be found in those traditional doctrines that are in some way or other attached to Judaism: fundamentally it is nothing but a particular way of expressing the idea of universal manifestation and its relation with the Principle.

PURUSHA AND PRAKRITI

We must now consider Purusha no longer in itself, but in relation to manifestation; and this will enable us later on to understand better why it can be regarded under several aspects, while being at the same time one in reality. It may be said then that Purusha, in order that manifestation may be produced, must enter into correlation with another principle, although such a correlation is really non-existent in relation to the highest (uttama) aspect of Purusha, for there cannot in truth be any other principle than the Supreme Principle, except in a relative sense; but once we are dealing, even principally, with manifestation, we are already in the realm of relativity. The correlative of Purusha is then Prakriti, the undifferentiated primordial substance; it is the passive principle, which is represented as feminine, while Purusha, also called Pumas, is the active principle, represented as masculine; and these two are the poles of all manifestation, though remaining unmanifested themselves. It is the union of these complementary principles which produces the integral development of the human individual state, and that applies relatively to each individual. Moreover, the same may be said of all other manifested states of the being and not only of the human state; for, although we have to consider this state more especially, it is important always to remember that it is but one state among others, and that it is not merely at the confines of human individuality but rather at the confines of the totality of manifested states, in their indefinite multiplicity, that Purusha and Prakriti appear to us as proceeding in some sort from a polarization of principal Being.

If, instead of considering each individual separately, we consider the whole of a domain formed by a determinate degree of existence,
such as the individual domain in which the human state unfolds (or no matter what other analogous domain of manifested existence similarly owing its definition to the combination of certain special and limiting conditions), Purusha is, for such a domain (including all the beings who develop their corresponding possibilities of manifestation in it, successively as well as simultaneously), identified with Prajapati, the 'Lord of produced beings', an expression of Brahma itself insofar as it is conceived as Divine Will and Supreme Ruler. This Will is manifested in more particular form, for each special cycle of existence, as the Manu of that cycle, who gives it its Law (Dharma). Manu, as has already been explained elsewhere, must in fact on no account be regarded as a personage or as a 'myth', but rather as a principle, which is properly speaking the Cosmic Intelligence, the reflected image of Brahma (and in reality one with it), expressing itself as the primordial and universal Legislator.

1. Prajapati is also Vishvakarma, the 'universal constructive principle'; his name and function are moreover capable of various applications, more or less specialized according to whether or not they are referred to the consideration of this or that cycle or determinate state.

2. It is interesting to note that in other traditions the primordial Legislator is also called by names the root of which is the same as that of the Hindu Manu: we have for example Menes among the Egyptians and Minos among the Greeks; it is therefore a mistake to look upon these names as indicating historical personages.

3. This is the Adam Kadmon of the Hebrew Kabbalah; it is also the 'King' (Wang) of the Far-Eastern tradition (Tao Te Ching, chap. 25).

4. It is worth remembering that the institution of castes rests essentially upon this analogy. Concerning the function of Purusha considered from the point of view we are discussing here, see especially the Purusha-Sukta of the Rig-Veda, x. 90.

5. These terms properly belong to the Hermetic doctrine and are included among those which, in our opinion, may be justifiably employed in spite of the abuse they have been put to by the pseudo-esoterists of the present day.
such as the individual domain in which the human state unfolds (or no matter what other analogous domain of manifested existence similarly owing its definition to the combination of certain special and limiting conditions), Purusha is, for such a domain (including all the beings who develop their corresponding possibilities of manifestation in it, successively as well as simultaneously), identified with Prajāpati, the 'Lord of produced beings', an expression of Brahman itself insofar as it is conceived as Divine Will and Supreme Ruler. This Will is manifested in more particular form, for each special cycle of existence, as the Manu of that cycle, who gives it its Law (Dharma). Manu, as has already been explained elsewhere, must in fact on no account be regarded as a personage or as a 'myth', but rather as a principle, which is properly speaking the Cosmic Intelligence, the reflected image of Brahman (and in reality one with it), expressing itself as the primordial and universal Legislator. Just as Manu is the prototype of man (manava), the pair Purusha-Prakriti, relatively to a determinate state of being, may be considered as equivalent, in the realm of existence corresponding to that state, to what Islamic esoterism calls 'Universal Man' (al-Insan al-kamil). This conception, moreover, may be further extended to embrace the totality of manifested states, and it then establishes the analogy between the constitution of the universal manifestation and that of its individual human modality, or to adopt the language used by certain Western schools, between the 'macrocosm' and the 'microcosm'.

Now it is essential to notice that the conception of the pair Purusha-Prakriti has nothing at all to do with any 'dualistic' conception whatsoever, and in particular that it is totally different from the 'spirit-matter' dualism of modern Western philosophy, the origin of which is really imputable to Cartesianism. Purusha cannot be regarded as corresponding to the philosophical notion of 'spirit', as we have already pointed out in connection with the description of Atma as 'Universal Spirit', which term is only acceptable on condition that it be taken in quite a different sense; and despite the assertions of a considerable number of orientalists, Prakriti corresponds even less to the notion of 'matter', which is in fact so completely foreign to Hindu thought that there is no word in Sanskrit with which to translate it, even approximately; this shows, moreover, that such a notion is lacking in any real foundation. Furthermore, it is very probable that even the Greeks themselves did not possess the notion of matter as understood by the moderns, philosophers as well as physicists; at any rate, the meaning of the word ὑλή in Aristotle, is exactly that of 'substance' in all its universality, and ἐνέργεια (which is unsatisfactorily rendered by the word 'form' on account of the ambiguities to which it too easily gives rise) corresponds no less precisely to 'essence' regarded as the correlative of 'substance'. Indeed, these terms 'essence' and 'substance', taken in their widest sense, are perhaps those which give the most exact idea in Western languages of the conception we are discussing, a conception of a much more universal order than that of 'spirit' and 'matter', and of which the latter represents at most but one very particular aspect, a specification referring to one determinate state of being; outside this state it loses all validity and it is in no wise applicable to the whole of universal manifestation, as is the conception of 'essence' and 'substance'. It should further be added that the distinction between 'essence' and 'substance', primordial as it is in comparison

1. Prajāpati is also Vishvakarma, the 'universal constructive principle'; his name and function are moreover capable of various applications, more or less specialized according to whether or not they are referred to the consideration of this or that cycle or determinate state.

2. It is interesting to note that in other traditions the primordial Legislator is also called by names the root of which is the same as that of the Hindu Manu: we have for example Menes among the Egyptians and Minos among the Greeks; it is therefore a mistake to look upon these names as indicating historical personages.

3. This is the Adam Kadmon of the Hebrew Kabbalah; it is also the 'King' (Wang) of the Far-Eastern tradition (Tao Te Ching, chap. 25).

4. It is worth remembering that the institution of castes rests essentially upon this analogy. Concerning the function of Purusha considered from the point of view we are discussing here, see especially the Purusha-Sukta of the Rig-Veda, x. 90. Vishvakarma, an aspect or function of 'Universal Man', corresponds to the 'Great Architect of the Universe' of the Western initiations.

5. These terms properly belong to the Hermetic doctrine and are included among those which, in our opinion, may be justifiably employed in spite of the abuse they have been put to by the pseudo-esoterists of the present day.
with all other distinctions, is nonetheless relative; it is the first of all dualities, that from which all others derive directly or indirectly, and it is with this distinction that multiplicity strictly speaking begins: but one must not see in it the expression of an absolute irreducibility, which is in no wise to be found there: it is Universal Being which, relatively to the manifestation of which it is the Principle, polarizes itself into 'essence' and 'substance', without its intrinsic unity being however in any way affected thereby. In connection it may be pointed out that the Vedānta, from the very fact that it is purely metaphysical, is essentially the 'doctrine of non-duality' (advaita-vāda); if the Sāṅkhya has appeared 'dualistic' to those people who failed to understand it, that is because its point view stops short at the consideration of the first duality, a fact which does not prevent its admitting everything transcends it as possible, which is the very opposite of what occurs in the case of the systematic conceptions beloved of philosophers.

We have still to define more precisely the nature of Prakṛiti, the first of the twenty-four principles (tattvas) enumerated in the Sāṅkhya; Puruṣa, however, had to be considered before Prakṛiti, since it is inadmissible to endow the plastic or substantial principle (substantial in the strictly etymological sense of the word, meaning the 'universal substratum', that is to say the support of all manifestation) with spontaneity; it is purely potential and passive, capable of every kind of determination, but never determining itself. Prakṛiti cannot therefore really be a cause by itself (we are speaking of an 'efficient cause'), apart from the action or rather the influence of the essential principle, which is Puruṣa, and which is, so to speak, the 'determinant' of manifestation; all manifested things are indeed produced by Prakṛiti, of which they are so many modifications or determinations, but, without the presence of Puruṣa, these productions would be deprived of all reality. The opinion according to which Prakṛiti is self-sufficient as the principle of manifestation could only be derived from an entirely erroneous view of the Sāṅkhya, originating simply from the fact that, in this doctrine, what is called 'production' is always viewed from the standpoint of 'substance', and perhaps also from the fact that Puruṣa is only mentioned there as the twenty-fifth tattva, moreover quite independently of the others, which include Prakṛiti and all its modifications; such an opinion, furthermore, would be formally opposed to the teaching of the Veda.

Mūla-Prakṛiti is 'primordial Nature' (in Arabic al-Fitrah), the root of all manifestation (since mūla signifies 'root'); it is also described as Pradhāna, that is to say, 'that which is laid down before all other things', comprising all determinations potentially; according to the Purāṇas, it is identified with Māyā, conceived as 'mother of forms'. It is undifferentiated (avyakta) and 'undistinguishable', neither compounded of parts nor endowed with qualities, inferable from its effects only, since it is imperceptible in itself, and productive without being itself a production. 'Root, it is without root, since it would not be a root if it had a root itself."

Prakṛiti, root of all, is not a production. Seven principles, the great [Mahat, the intellectual principle], or Buddhi] and the others [ahaṅkāra, or the individual consciousness, which generates the notion of the 'ego', and the five tanmātṛas or essential determinations of things] are at the same time productions [of Prakṛiti] and productive [in relation to those which follow]. Sixteen [the eleven indriyas or faculties of sensation and action, including manas or the mental faculty among them, and the five bhūtās or substantial and sensible elements] are productions...
Purusha is neither produced nor productive [in itself],
though it is indeed its action, or rather, according to an expression borrowed from the Far-Eastern tradition, its 'actionless activity', which essentially determines everything that is substantially produced through Prakriti.

To complete these remarks, it may be added that Prakriti, while necessarily one in its 'indistinction', contains within itself a triplicity which, on becoming actualized under the 'organizing' influence of Purusha, gives rise to the multiplicity of determinations. Prakriti, in fact, possesses three gunas, or constitutive qualities, which are in perfect equilibrium in the state of primordial indifferention; every manifestation or modification of substance, however, represents a rupture of this equilibrium, and beings in their different states of manifestation participate in the three gunas in different degrees and, so to speak, in indefinitely varying proportions. These gunas are not, therefore, states but conditions of universal Existence, to which all manifested beings are subjected and which must be carefully distinguished from the special conditions which determine and define such and such a state or mode of manifestation. The

10. Colebrooke (Essays on the Philosophy of the Hindus) was right in pointing out the remarkable agreement between the passage just quoted above and the following, taken from the treatise De Divisione Naturae of Scotus Erigena: 'It seems to me that the division of Nature must be established according to four different kinds, the first of which is that which creates but is not created; the second, that which is created and itself creates; the third, that which is created and does not create; and lastly the fourth, that which is neither created nor creating' (Book I). 'But the first and fourth kind [respectively assimilable to Prakriti and to Purusha] coincide [are merged or rather are united] in the Divine Nature, for it can be called creative and uncreate, as it is in itself, but also neither creating nor created, since, being infinite, it cannot produce anything outside itself and likewise there is no possibility of it not being in itself and by itself' (Book III). It will however be noticed that the idea of 'creation' has been substituted for that of 'production': furthermore, the expression 'Divine Nature' is not entirely adequate, since what it here designates is properly speaking Universal Being: in reality it is Prakriti which is primordial Nature, while Purusha, essentially immutable, stands outside Nature, the very name of which expresses an idea of 'becoming'.

three gunas are: sattva, conformity to the pure essence of Being (Sat), which is identified with intelligible light or Knowledge and is represented as an upward tendency; rajas, the expansive impulse, in accordance with which the being develops itself in a given state, and, so to speak, at a determinate level of existence; and lastly, tamas, obscurity, assimilated with ignorance, and represented as a downward tendency. We will confine our remarks in this instance to the foregoing definitions, which we have already mentioned elsewhere; this is not the occasion to enlarge further on these considerations for they lie somewhat outside our present subject, nor to speak of the diverse applications to which they give rise, more especially in relation to the cosmological theory of the elements; these developments will find a more appropriate place in other studies.
According to the Bhagavad-Gītā,

there are in the world two Purushas, the one destructible and the other indestructible; the first is distributed among all beings; the second is immutable. But there is another Purusha, the highest [uttama], which is called Paramātmā, and which, as imperishable Lord, pervades and sustains three worlds [the earth, the air, and the heavens, representing the three fundamental degrees between which all the modes of manifestation are distributed].

As I transcend the destructible and even the indestructible [being the supreme Principle of the one and of the other], I am extolled in the world and in the Veda under the name of Purushottama.

Of the first two Purushas, the destructible is jīvātmā, whose separate existence is in fact transitory and contingent like that of the individuality itself; and the ‘indestructible’ is Ātmā considered as the personality, permanent principle of the being through all its states of manifestation;² as for the third, it is Paramātmā as the text explicitly declares, the personality of which is a primordial determination, in accordance with the explanation we have previously given. True as it is to say that the personality is really beyond the realm of multiplicity, we may nevertheless, in a certain sense, speak of a personality for each being (we refer, naturally, to the being as a whole, and not to one of its states viewed in isolation). That is why the Sāṅkhya, the point of view of which does not attain to Purushottama, often describes Purusha as multiple; but it should be noticed that, even in this case, its name is always employed in the singular, so as to emphasize its essential unity. The Sāṅkhya has nothing in common, therefore, with any ‘monadism’ of the kind associated with the name of Leibnitz, where, moreover, it is the ‘individual substance’ which is regarded as a complete whole, forming a sort of closed system, a conception incompatible with any notion of a truly metaphysical order.

Purusha, considered as identical with the personality, ‘is, so to speak,’³ a portion [ānsha] of the Supreme Ruler [who, however, is really without parts, being absolutely indivisible and ‘without duality’], as a spark is a portion of the fire [the nature of which is wholly present in every spark].⁴ It is not subject to the conditions which

³. The word iva indicates that there is question of a comparison (upama) or of a manner of speech intended to facilitate understanding but which is not to be taken literally. Here is a Taoist text expressing a similar idea: ‘Norms of every sort, such as that which makes one body of several organs [or one being of several states] . . . are so many participations in the Universal Ruler. These participations neither increase Him nor decrease Him, for they are communicated by Him, not detached from Him’ (Chuang Tzu, chapter 2, French translation by Father Wieger, p.217).

⁴. Brahma-Sūtras I.3.43. We would remind the reader that in our interpretation we are chiefly following the commentary of Shankāchārya.
determine the individuality, and even in its relations therewith it remains unaffected by individual modifications (such as pleasure and pain, for example), which are purely contingent and accidental, and not essential to the being, since they all proceed from the plastic principle, Prakriti or Pradhâna, as from a single root. It is from this substance, containing all the possibilities of manifestation potentially, that modifications are produced in the manifested sphere, by the actual development of these possibilities, or, to use the Aristotelian expression, by their passage from potency to act. ‘All modifications [parinâma],’ says Vijñâna-Bhikshu, ‘from the original production of the world [that is to say, of each cycle of existence] to its final dissolution, proceeds exclusively from Prakriti and her derivatives,’ that is to say from the twenty-four tattvas of the Sânkhyâ.

Purusha is, however, the essential principle of all things, since it is Purusha which determines the development of the possibilities of Prakriti; but it never itself enters manifestation, so that all things, insofar as they are viewed distinctively, are different from it, and nothing which concerns them in their distinctive development (that is to say, in ‘becoming’) can affect its immutability.

Thus the solar or lunar light [capable of manifold modifications] appears identical with that which gives birth to it [the luminous source, considered as immutable itself], but nevertheless it is distinct therefrom [in external manifestation; likewise modifications or manifested qualities are, as such, distinct from their essential principle, in that they can in no manner affect it]. As the image of the sun reflected in water quivers and fluctuates in accordance with the undulations of the water, yet without affecting the other images reflected therein, much less the solar orb itself, so the modifications of one individual leave other individuals unaffected and, so much the more so, the Supreme Ruler Himself,5

who is Purushottama, and with whom the Personality is in reality identical in its essence, just as all sparks are identical with fire considered as indivisible in its innermost nature.

It is the ‘living soul’ (jivâtmâ) which is here compared to the image of the sun in water, as being the reflection (abhâsa) in the individual realm, and relative to each individual, of the Light, principally one, of the ‘Universal Spirit’ (Âtmâ); and the luminous ray which confers existence upon this image, connecting it with its source, is, as we shall see later on, the higher intellect (Buddhi), belonging to the realm of formless manifestation.6 As for the water, which reflects the solar light, it is habitually regarded as the symbol of the plastic principle (Prakriti), the image of ‘universal passivity’; this symbol, moreover, bearing the same meaning, is common to all traditional doctrines.7 Here, however, a limitation must be imposed on its general sense, since Buddhi, although formless and supra-individual, is nonetheless manifested, and consequently derives from Prakriti, of which it is the first production: the water can

6. It must be pointed out that the ray presupposes a medium of propagation (manifestation in non-individualized mode), and that the image implies a plane of reflection (individualization under the conditions of a certain state of existence).

7. In this connection one can in particular refer to the opening passage of Genesis (1:2): ‘And the Spirit of God was moving over the face of the waters.’ This passage contains a very clear indication of the two complementary principles we are discussing here, the Spirit corresponding to Purusha and the Waters to Prakriti. From a different point of view but nevertheless analogically connected with the preceding one, Raûhâ Elohim of the Hebrew text can also be assimilated with Hamsa, the symbolic swan, the vehicle of Brahmâ, which sits on the Brahmânda, the ‘World Egg’ that is contained in the primordial Waters; and it must also be noted that Hamsa is at the same time the ‘breath’ (spiritus), which is the first meaning of Raûhâ in Hebrew. Lastly, if one adopts the particular point of view of the constitution of the corporeal world, Raûhâ is Air (Vayu); and, for the fact that it would imply too long a digression, it would be possible to show that a perfect concordance exists between the Bible and the Veda in respect of the development of the sensible elements. In any case, one can discern in the examples already given an indication of three superposed meanings, referring respectively to the three fundamental degrees of manifestation (formless, subtle, and gross) which are described as the ‘three worlds’ (Tribhuvana) by the Hindu tradition. These three worlds also figure in the Hebrew Kabbalah under the names of Beriah, Yetserah, and Asiah; over them is Atsîlah, which is the principal state of non-manifestation.
therefore only represent here the potential sum of formal possibilities, or in other words, the realm of manifestation in the individual mode, and thus it leaves outside itself those formless possibilities which, while corresponding with states of manifestation, must nonetheless be referred to the Universal.  

8. If the symbol of water is taken in its usual sense, then the sum of formal possibilities is described as the 'lower waters' and that of the formless possibilities as the 'upper waters.' From the point of view of cosmogony, the parting of the 'lower waters' from the 'upper waters' is also described in Genesis i, 6, and 7; it is also worth noting that the word Matm, which means 'water' in Hebrew, has the grammatical form of the dual number, which allows of its conveying, among other meanings, the idea of the 'double chaos' of the formal and formless possibilities in the potential state. The primordial waters, before their separation, are the totality of the possibilities of manifestation, insofar as the latter constitutes the potential aspect of Universal Being, which is properly speaking Prakriti. But there is also another and superior meaning to the same symbolism, which appears when it is carried over beyond Being itself: the waters then represent Universal Possibility, conceived in an absolutely total manner, that is to say insofar as it embraces at the same time in its Infinity the domains of manifestation and non-manifestation alike. This last meaning is the highest of all; at the degree immediately below it, in the original polarization of Being, we have Prakriti, with which we have still only reached the Principle of manifestation. After that, continuing downward, the three fundamental degrees of manifestation can be considered as we have done previously: we then have, in the first two cases, the 'double chaos' before mentioned, and lastly, in the corporeal world, water as a sensible element (Ap), in which capacity it is already included implicitly, like all things that pertain to gross manifestation, in the realm of the 'lower waters'; for the subtle manifestation plays the part of immediate principle relative to this gross manifestation. Though the above explanations are somewhat lengthy, we believe they will have served a good purpose in making it easier, by means of the examples given, to understand how a plurality of meanings and applications can be extracted from the traditional texts.

6
THE DEGREES OF INDIVIDUAL MANIFESTATION

We must now pass on to consider the different degrees of the manifestation of Âtmâ, regarded as the personality, insofar as this manifestation constitutes human individuality; and it may indeed literally be said to constitute it, since this individuality would enjoy no existence at all if it were separated from its principle, that is to say from the personality. The expression just used calls, however, for one reservation; by the manifestation of Âtmâ must be understood manifestation referred to Âtmâ as its essential principle, but it must not be inferred from this that Âtmâ manifests itself in some way, since it never enters into manifestation, as we have previously stated, and that is why it is not in any way affected thereby. In other words, Âtmâ is 'that by which all things are manifested, and which is not itself manifested by anything'; and it is this point which must never be lost sight of throughout all that follows. We will repeat once more that Âtmâ and Purusha are one and the same principle, and that it is from Prakriti and not from Purusha that all manifestation is produced; but if the Sânkhya, because its point of view is chiefly 'cosmological' and not strictly speaking metaphysical, sees this manifestation as the development or 'actualization' of the potentialities of Prakriti, the Vedânta necessarily sees it quite differently, because it regards Âtmâ, which is outside any change or

1. Kena Upanishad 1.5–9; the whole passage will be given in a subsequent chapter.
‘becoming’, as the true principle to which everything must ultimately be referred. It might be said that, viewed in this manner, the Sāṅkhya and the Vedānta represent respectively the points of view of ‘substance’ and of ‘essence’, and that the first can be called a ‘cosmological’ point of view, because it is that of Nature and of ‘becoming’; but, on the other hand, metaphysics does not limit itself to ‘essence’ regarded as the correlative of ‘substance’, nor even to Being, in which these two terms are unified; it extends much further, since it attains to Paramātmā or Purushottama, which is the Supreme Brahma, and therefore its point of view (assuming that such an expression is still applicable here) is truly unlimited.

Furthermore, when we speak of the different degrees of individual manifestation, it should be readily understood that they correspond with the degrees of universal manifestation, by reason of the basic analogy between the ‘macrocosm’ and the ‘microcosm’ to which we have already alluded. This will be still better understood if one remembers that all manifested beings alike are subject to the general conditions which limit the states of existence in which they are placed; if we cannot, when considering any given being, really isolate one state of that being from the whole composed of all the other states among which it is situated hierarchically at a given level, no more can we, from another point of view, isolate that state from all that belongs, not to the same being, but to the same degree of universal Existence; and thus all appears linked together in various different ways, both within manifestation itself, and also insofar as the latter, forming a single whole in its indefinite multiplicity, is attached to its principle, that is, to Being, and through Being to the Supreme Principle. Multiplicity, once it is a possibility, exists according to its own mode, but this mode is illusory, in the sense we have already ascribed to that word (that of a lesser reality), because the very existence of this multiplicity is based upon unity, from which it is derived and within which it is principally contained. When viewing the whole of universal manifestation in this manner, we may say that in the very multiplicity of its degrees and of its modes ‘Existence is one,’ according to a formula borrowed from Islamic esoterism; furthermore, there is a fine distinction which it is important to note here as between ‘unicity’ and ‘unity’: the first embraces multiplicity as such while the second is its principle (not its ‘root’, in the sense in which this word is applied to Prakriti only, but as containing within itself, ‘essentially’ as well as ‘substantially’, all the possibilities of manifestation). It can therefore correctly be said that Being is one, and that it is Unity itself2 in the metaphysical sense, however, and not in the mathematical sense, for at this stage we have passed quite outside the domain of quantity. Between metaphysical Unity and mathematical unity there is analogy but not identity; and similarly, when we speak of the multiplicity of universal manifestation, it is again not with a quantitative multiplicity that we are concerned, for quantity is merely a special condition of certain manifested states. Finally, if Being is one, the Supreme Principle is ‘without duality’, as we shall see in what follows: Unity is indeed the first of all determinations, but it is already a determination, and, as such, it cannot properly be applied to the Supreme Principle.

Having given these few indispensable explanations, let us return to the consideration of the degrees of manifestation. It is necessary, as we have seen, to draw a distinction first of all between formless and formal manifestation; but when we confine our attention to the individuality, it is always exclusively with the latter that we are concerned. The human state properly so called, like every other individual state, belongs wholly to formal manifestation, since it is precisely the presence of form among the conditions contributing to make up a particular mode of existence which characterizes that mode as individual. If, therefore, we have to consider a formless element, it will also necessarily be a supra-individual element, and, as regards its relationship with human individuality, it must never be considered as constitutive of it, nor for any reason at all as forming a part of it, but as linking the individuality to the personality. The personality, indeed, is unmanifested, even insofar as it is regarded as the principle of the manifested states, just as Being, although it is properly the principle of universal manifestation, remains outside of and beyond that manifestation (and we may recall Aristotle’s ‘unmoved mover’ at this point); on the other

2. The same idea is expressed by the Scholastic adage: Esse et unum convertuntur.
hand, formless manifestation is also, in a relative sense, principal in relation to formal manifestation, and thus it establishes a link between the latter and its higher unmanifested principle, which is, moreover, the common principle of these two orders of manifestation. Similarly, if we distinguish, in formal or individual manifestation, between the subtle and the gross state, the first is, more relatively still, principal in relation to the second, and hence placed hierarchically between it and formless manifestation. We have, therefore, through a series of principles becoming progressively more relative and determined, a chain at once logical and ontological (the two points of view, moreover, corresponding in such a way that they can only be separated artificially) extending from the unmanifested downward to gross manifestation, passing through the intermediary of formless manifestation and then of subtle manifestation; and, whether we are dealing with the ‘macrocasm’ or with the ‘microcosm’, such is the general order which must be followed in the development of the possibilities of manifestation.

The elements about which we shall now be speaking are the tattvas enumerated by the Sāṅkhya, with the exception, of course, of the first and the last, that is, of Prakṛti and Puruṣa. We have seen that, among these tattvas, some are regarded as ‘productive productions’ and others as ‘unproductive productions’. A question therefore suggests itself in this connection: is this division equivalent to the di-visions we have just specified in respect of the degrees of manifestation, or does it not at least roughly correspond with it? For example, if we limit ourselves to the point of view of individuality, we might be inclined to refer the tattvas of the first group to the subtle state and those of the second to the gross state, the more so since, in a certain sense, subtle manifestation is productive of gross manifestation, while the latter is not productive of any further state: but the answer is not really quite so simple. In point of fact, in the first group we have Buddhī first of all, which is the formless element to which we were alluding just now; as to the other tattvas which are included with it, ahaṅkāra and the tanmātras, they do indeed belong to the domain of subtle manifestation. Again, in the second group, the bhūtas incontestably belong to the domain of gross manifestation, since they are the corporeal elements: but manas, not being corporeal, must, in itself at least, be referred to subtle manifestation, although its activity is also exercised in relation to gross manifestation; while the other indriyas have in some sort a twofold aspect, being conceivable at the same time as faculties and as organs, psychically as well as corporeally therefore, which is also to say both in the subtle and in the gross state. It must, moreover, be clearly understood that that part of subtle manifestation which is taken into consideration in all these circumstances is really only the portion affecting the human individual state in its extra-corporeal modalities; and, superior as these may be to the corporeal modality, inasmuch as they contain its immediate principle (their domain extending at the same time much further), nevertheless, if we situate them in the totality of universal Existence, they still belong to that degree of Existence in which the human state as a whole is situated. The same remark also applies when we say that subtle manifestation is productive of gross manifestation: for this to be strictly accurate, however, it is necessary, in the case of the former, to apply the restriction we have just mentioned, since the same relationship cannot be established in respect of those other states which, though likewise individual states, are not human states and therefore differ entirely as to their conditions (other than the condition imposed by the presence of form); for those states must nevertheless also be included in subtle manifestation, as we have already explained, from the moment that we accept the human individuality as a term of comparison as we must inevitably do, while clearly bearing in mind that the human individual state is really neither more nor less important than any other state whatsoever.

One last observation is called for; in speaking of the order of development of the possibilities of manifestation, or of the order in which the elements corresponding to the different phases of this development should be enumerated, great care must be taken to explain that such an order implies a purely logical succession, signifying, however, a real ontological connection, and that there cannot be any question at all here of a temporal succession. Development in time, indeed, only corresponds with a special condition of existence, which is one of those conditions defining the domain in which the human state is contained; and there is an indefinite number of other
modes of development equally possible, and included also within universal manifestation. Human individuality cannot therefore be related in the order of time to other states of the being, since these, in a general way, are extra-temporal: and that is also true even when it is only a question of states which likewise belong to formal manifestation. It might further be added that certain extensions of the human individuality, outside its corporeal modality, are already freed from time, without on that account being exempt from the general conditions of the state to which this individuality belongs; these extensions are really situated in mere prolongations of that state, and we shall doubtless have occasion in other studies to explain just how such prolongations may be reached through the suppression of one or other of the conditions which together contribute to make up the corporeal world. Such being the case, it is all the more apparent that there cannot be any question of the temporal condition applying outside this same state, nor, consequently, of its governing the relation of the integral human state with other states; and this is even less admissible when it is a question of a principle common to all the states of manifestation, or of an element which, though indeed manifested, is nevertheless superior to all formal manifestation, as is the element to be considered next.

BUDDHI OR THE HIGHER INTELLECT

The first degree of the manifestation of Ātman, taking this expression in the sense explained in the last chapter, is the higher intellect (Buddhi), which, as we have seen above, is also called Mahat or the 'great principle'; it is the second of the twenty-five principles of the Sāṅkhya and the first therefore of all the productions of Prakriti. This principle still pertains to the universal order, since it is formless; we must not, however, forget that it already belongs to manifestation, and therefore proceeds from Prakriti, for all manifestation, at whatever degree we take it, necessarily implies the two correlative and complementary terms, Purusha and Prakriti, 'essence' and 'substance'. It is nonetheless true that Buddhi transcends the domain not only of human individuality but of every individual state whatsoever, and it is this which justifies its other name of Mahat: it is never really individualized, therefore, and it is not until the next stage, that of the particular (or rather 'particularist') consciousness of the 'ego', that we shall find individuality realized.

Buddhi, considered in relation to the human individuality or to any other individual state, is, then, its immediate but transcendent principle, just as, from the point of view of universal Existence, formless manifestation is the principle of formal manifestation; and it is at the same time what may be called the expression of the personality in manifestation, therefore that which unifies the being throughout the indefinite multiplicity of its individual states (the human state, in its utmost extension, being but one state among all the rest). In other words, if we view the 'Self' (Ātman) or personality,
as the Spiritual Sun\(^1\) which shines at the center of the entire being, Buddh\(_i\) will be the ray directly emanating from this Sun and illuminating in its entirety the particular individual state that more especially concerns us, while at the same time linking it to the other individual states of the same being, or rather, more generally still, to all the manifested states (individual or non-individual) of that being, and, beyond these, to the center itself. Further, it should be remarked, without however going into the question so far as to interrupt the course of our exposition, that, owing to the fundamental unity of the being in all its states, the center of each state, where this spiritual ray is projected, should be regarded as virtually, if not effectively, identified with the center of the entire being; and it is for this reason that any state whatsoever, the human state as well as any other, can be taken as a basis for the realization of the Supreme Identity. It is precisely in this sense, and in virtue of this identification, that one may say, as we did in the first place, that Purusha itself dwells at the center of the human individuality, that is to say at the point where the intersection of the spiritual ray with the realm of the vital possibilities determines the 'living soul' (jiv\(_{\text{âtma}}\)).\(^2\)

Furthermore, Buddh\(_i\), like everything that proceeds from the potentialities of Prakrit\(_i\), participates in the three gu\(_{\text{n}}\)as; that explains why, when viewed from the standpoint of distinctive knowledge (vij\(_{\text{âjñ\(\text{â}\)}}\)), it is regarded as ternary, and, in the sphere of universal Existence, it is then identified with the divine Trimurti; Mahat is conceived distinctively as three Gods [in the sense of three aspects of the intelligible Light, for this is the real meaning of the Sanskrit word Deva, of which the Latin word Deus is, moreover, etymologically the exact equivalent],\(^3\) through the influence of the three gu\(_{\text{n}}\)as, being one single manifestation [m\(_{\text{ûrti}}\)] in three Gods. In the universal order, it is the Divinity [Ishvara, not in himself, but under his three principal aspects as Brahm\(_{\text{â}}\), Vishnu, and Shiva, constituting the Trimurti, or 'triple manifestation']; but regarded distributively [under the aspect of 'separativity', which is, moreover, purely contingent] it belongs [without however being itself individualized] to individual beings [to whom it communicates the possibility of participating in the divine attributes, that is to say in the very nature of Universal Being, the Principle of all existence].\(^4\)

It is easy to see that Buddh\(_i\) is here considered in its respective relations with the first two of the three Purush\(_{\text{as}}\) which are spoken of in the Bhagavad-G\(_{\text{ît\(\text{a}\)}}\) in the 'macrocosmic' order the 'immutable' Purusha is Ishvara himself, of whom the Trimurti is the expression in manifested mode (we are speaking, of course, of formless manifestation, for there is nothing individual about it); and it is stated that the other Purusha is 'disseminated among all beings'. Similarly, in the 'microcosmic' order, Buddh\(_i\) may be viewed relatively to the personality (Atm\(_{\text{â}}\)) and relatively the 'living soul' (jiv\(_{\text{âtma}}\)), the latter moreover only being the reflection of the personality in the individual human state, a reflection which could not exist without the mediation of Buddh\(_i\). To recall here the symbol of the sun and its reflected image in the water, Buddh\(_i\) is, as we have stated, the ray which determines the formation of the image and at the same time unites it with its luminous source.

It is in virtue of the twofold relationship which has just been indicated, and of this function of intermediary between the personality

---

1. As to the sense in which this expression should be taken, we would refer the reader to the remark previously made concerning the 'Universal Spirit'.
2. Clearly, we are not referring in this instance to a mathematical point, but to what might by analogy be called a metaphysical point, always with the proviso however that such an expression must not be allowed to evoke the notion of the 'monad' of Leibnitz, since jiv\(_{\text{âtma}}\) is nothing more than a particular and contingent manifestation of Atm\(_{\text{â}}\), so that its separate existence is really illusory. The geometrical symbolism referred to will however be set forth in a separate work, together with all the developments to which it lends itself. [See The Symbolism of the Cross, in which this geometrical symbolism is treated in detail. Ed.]
3. Were one to give to the word 'God' the meaning that it has subsequently assumed in Western languages, its use in the plural would make nonsense from the Hindu just as much as from the Christian or Islamic point of view, since as we pointed out before, it could then only apply to Ishvara exclusively, in his indivisible unity which is that of Universal Being, whatever multiplicity of aspects can be considered as pertaining to it in a secondary way.
4. Matsya-Pur\(_{\text{â}}\)â. It will be noticed that Buddh\(_i\) is not unrelated to the Logos of the Alexandrians.
and the individuality, that we may regard the intellect, in spite of the inevitable inadequacy of such a way of speaking, as passing in some sort from the state of universal potentiality to the individualized state, but without really ceasing to be such as it was, since this apparent passage only comes about through its intersection with the particular domain constituted by certain conditions of existence defining the individuality in question; it then produces as a resultant of this intersection the individual consciousness (ahaṃkāra), implied in the 'living soul' (jīvātmā) in which it is inherent. As we have already pointed out, this consciousness, which is the third principle of the Śaṅkhya, gives rise to the notion of the 'ego' (aham, whence the name ahaṃkāra, literally 'that which makes the me'), since its proper function is to establish the individual conviction (abhimāna), that is to say precisely the notion that the 'I am' is concerned with external (bāhya) and internal (abhyāntara) objects, which are respectively the objects of perception (pratyakṣa) and contemplation (dhyāna); and the sum total of these objects is described by the term idam, 'this', when conceived as in opposition to aham or 'me', a purely relative opposition, however, and for that reason quite different from that which modern philosophers claim to establish between 'subject' and 'object' or between 'mind' and 'things'. Thus the individual consciousness proceeds directly, but simply as a conditioned modality, from the intellectual principle, and, in its turn, produces all the other principles or elements specially attaching to the human individuality. These elements we shall now consider in greater detail.

8

MANAS OR THE INWARD SENSE: THE TEN EXTERNAL FACULTIES OF SENSATION AND ACTION

In its list of the tattvas, after individual consciousness (ahaṃkāra), the Śaṅkhya goes on to describe the five tanmātras, subtle elementary determinations, incorporeal therefore and outwardly imperceptible, belonging to the same group of productive productions. In an immediate sense they constitute respectively the principles of the five bhūtas or corporeal and sensible elements and receive their finite expression in the particular conditions of individual existence prevailing at the level of the human state. The word tanmātra literally means an 'assignment' (mātra, 'measure', 'determination') delimiting the proper sphere of a given quality (tad or tat, neuter pronoun, 'that', taken here in the sense of 'quiddity', like the Arabic dat) in Universal Existence; but this is not the place to enter into fuller details on this subject. We will merely remark that the five tanmātras are usually indicated by the names of the sensible qualities: auditive or sonorous (shabda), tangible (sparsha), visible (rupa, with the double sense of form and color), sapid (rasa), and olfactory (gandha); but these qualities must be looked upon here as existing in a relatively principial and 'non-developed' state

1. It should be noted that these words tat and dat are phonetically equivalent to one another, as also to the English that, which bears the same meaning.
only, since it is through the bhūtas alone that they will be actually
manifested in the sensible order; furthermore, the relation of the
tanmātras to the bhūtas is analogous, in its relative degree, to that of
‘essence’ to ‘substance’, so that the term ‘elementary essences’
could be applied accurately enough to the tanmātras.2 The five bhūtas, in
the order of their production or of their manifestation (an order
parallel to that just indicated for the tanmātras, since a correspond-
ing sensible quality goes with each element), are Ether (Ākāsha), Air
(Vāyu), Fire (Tejas), Water (Ap), and Earth (Prithvi or Prithivi); and
it is from these that the whole of gross or corporeal manifestation is
made up.

Between the tanmātras and the bhūtas, and constituting along
with the latter the group of ‘unproductive productions’, there are
eleven distinct and specifically individual faculties which proceed
from ahaṅkāra, and which, at the same time, all participate in the
tanmātras. Of the eleven faculties in question ten are external,
five of sensation and five of action; the eleventh, which is concerned
with both these functions, is the inward sense or mental faculty
(manas), and this is directly attached to consciousness (ahaṅkāra).3
It is to manas that we must refer individual thought, which belongs
to the formal order (and which includes reason as well as memory
and imagination);4 it is in no way inherent to the transcendent
intelect (Buddhi), the attributes of which are essentially formless. It
is worth remarking in this connection that, for Aristotle also, pure
intelect is of a transcendent order and can claim knowledge of uni-
versal principles as its proper object; this knowledge, which is not
discursive in any respect, is acquired directly and immediately by
intellectual intuition. To avoid any misunderstanding it should be
added that this intuition has nothing at all to do with the so-called

2. It is in a sense quite similar to this conception of the tanmātras that Fabre
D'Olivet, in his interpretation of Genesis (The Hebraic Tongue Restored), makes use
of the expression 'intelligible elementation'.

3. Concerning the production of these various principles, considered from the
'macrocosmic' point of view, cf. Māṇava-Dharma-Shāstra (The Law of Manu)

4. This was doubtless Aristotle's meaning when he said that 'man [as an indi-
nual] never thinks without images,' that is to say without forms.

'intuition' of a merely sensitive and vital order, which plays such a
prominent part in the decidedly anti-metaphysical theories of cer-
tain contemporary philosophers.

As for the development of the different faculties of individual
man, it is enough to quote the teaching of the Brahma-Sūtras on
this subject:

The intellect, the inward sense, and also the faculties of sensation
and action, are developed [in manifestation] and reabsorbed
[into the unmanifested] in a similar sequence [except that reab-
sorption proceeds in an inverse order to that of development],5
and this sequence always follows that of the elements from which
these faculties proceed as regards their constitution8 [with the
exception, however, of the intellect, which is developed in the
formless order prior to the determination of any formal or pro-
perly individual principle]. As to Purusha [or Ātmā], its eman-
ation [insofar as it is regarded as the personality of a being] is not
a birth [even in the widest meaning of the word],7 neither is it a
production [implying a starting-point for its actual existence, as
is the case for everything that proceeds from Prakriti]. One can-
not in fact, assign to it any limitation [by any particular condi-
tion of existence], since, being identified with the Supreme
Brahma, it partakes of its infinite essence8 [implying the posses-
sion of the divine attributes, at least virtually and even actually

5. The reader must be reminded that it is in no wise an order of temporal suc-
cession that is in question.

6. Here the reference can be either to the tanmātras or the bhūtas depending
whether the indriyas are considered in the subtle or the gross state, that to. say as
faculties or as organs.

7. It is possible, in fact, to apply the name of 'birth' or 'death' to the beginning
and end of any cycle whatsoever, that is to say, of an existence in whatever state of
manifestation, and not in the human state alone; as will be explained further on,
the passage from one state to another is then both a death and a birth, according as
it is taken in relation to the antecedent to the subsequent state.

8. The word 'essence', when it is thus applied analogically, ceases to be any way a
correlative of 'substance'; besides, whatever possesses a correlative of any kind can-
not be infinite. Similarly, the word 'nature' when applied to Universal Being or even
beyond Being, loses its usual and etymological meaning entirely, together with the
idea of 'becoming' which is implied in it.
insofar as this participation is effectively realized in the Supreme Identity, not to speak of all that lies beyond any attribution whatsoever, since here we are contemplating the Supreme Brahma, which is nirguna, and not merely Brahma as saguna, that is to say Ishwara. It is active, but only in principle (therefore 'actionless'), for this activity (kartrita) is not essential to it nor inherent in it, but is simply eventual and contingent (merely relative to its states of manifestation). As the carpenter, grasping in his hand his axe and his other tools and then laying them aside, enjoys tranquillity and repose, so this Atma in its union with its instruments (by means of which its principal faculties are expressed and developed in each of its states of manifestation, and which are thus nothing but the manifestations of these faculties with their respective organs), is active (although this activity in no way affects its inmost nature), and, in relinquishing them, enjoys repose and tranquillity (in the 'inaction' from which, in itself, it never departed).

The various faculties of sensation and action (indicated by the word prana in a secondary acceptation) are eleven in number: five of sensation (buddhindriyas or jijnendriyas, means or instruments of knowledge in their own particular sphere), five of action (karmanendriyas), and the inward sense (manas). Where a greater number [thirteen] is given, the term indriya is employed in its widest and most comprehensive sense (manas), by reason of the plurality of its functions, the intellect [not in itself and insofar as it belongs to the transcendent order, but as a particular determination relative to the individual], the individual consciousness (aharyika, from which manas cannot be separated), and the inward sense properly so called (what the Scholastic philosophers term sensorium commune). Where a lesser number [usually seven] is given, the same term is applied in a more restricted manner: thus, seven sensible organs are specified, the two eyes, the two ears, the two nostrils and the mouth or tongue [so that, in this case, we are dealing merely with the seven openings or orifices of the head]. The eleven faculties mentioned above (although indicated collectively by the term prana) are not [as are the five vayus of which we shall speak later] simple modifications of the mukhya-prana or principal vital act [respiration, with the assimilation ensuing from it], but distinct principles [from the special point of view of human individuality].

The term prana, in its most usual acceptation, really means 'vital breath'; but in certain Vedic texts it serves to describe something which, in the universal sense, is identified in principle with Brahma itself, as when it is said that in deep sleep (sushupti), all the faculties are reabsorbed into prana, since 'while a man sleeps without dreaming, his spiritual principle (Atma viewed in relation to him) is one with Brahma, this state being beyond distinction and therefore truly supra-individual: that is why the word svapna, 'he sleeps', is interpreted as svam api to bhavati, 'he has entered into his own Self'.

As to the word indriya, it really means 'power', which is also the primary meaning of the word 'faculty'; but, by extension, it comes to mean, as has already been pointed out, both the faculty and its bodily organ, which are thus described by one and the same word and which are considered as constituting in combination a single instrument, either of knowledge (buddhi or jnana, these terms being here taken in their widest sense), or of action (karma). The five instruments of sensation are: the ears or hearing (shrotra), the skin or touch (tvach), the eyes or sight (chakshus), the tongue or

9. The possession of the divine attributes is called in Sanskrit aishwarya as constituting a real 'connaturality' with Ishvara.
10. Aristotle was right in also stressing the point that the prime mover of all things (or the principle of movement) must itself be motionless, which amounts to saying, in other words, that the principle of all action must be 'actionless'.
13. Commentary of Shankaracharya on the Brahma-Sutras, III.2.7.
14. Chhandogya Upanishad, vi.8.1. It goes without saying that this is a case of interpretation by the method of Nirukta and not one of etymological derivation.
taste (*rasana*), the nose or smell (*ghrāna*), being enumerated thus in the order of development of the senses, which is that of the corresponding elements (*bhūtas*); but, to explain this correspondence in detail, it would be necessary to discuss fully the conditions of corporeal existence, which we cannot undertake to do here. The five instruments of action are: the organs of excretion (*pāyu*), the generative organs (*upastha*), the hands (*pāni*), the feet (*pāda*), and lastly the voice or organ of speech (*vāch*),

which is reckoned as the tenth. *Manas* must be regarded as the eleventh, fulfilling in its own nature a double function of service both toward perception and toward action, and partaking in consequence of the properties of each, which it centralizes to a certain extent within itself.16

According to the *Sāṇkhya*, these faculties with their respective organs are (distinguishing three faculties in *Manas*) the thirteen instruments of knowledge in the sphere of human individuality (for the end of action is not in action itself but only insofar as it relates to knowledge): three are internal and ten external, compared to three sentinels and ten gates (consciousness being inherent in the former, but not in the latter when viewed distinctively). A bodily sense perceives, and an organ of action executes (the one being, as it were, an 'entry' and the other an 'outgoing': there are here two successive and complementary phases, of which the first is a centripetal and the second a centrifugal movement); between the two, the inward sense (*manas*) examines; consciousness (*ahānkarā*) makes the individual application, that is to say the assimilation of the perception by the 'ego', of which it henceforth becomes part as a secondary modification; and, finally, the pure intellect (*Buddhi*) transposes the data of the preceding faculties into the Universal.

---

15. This word *vāch* is identical with the Latin *vox*.

---

**9**

**ENVELOPES OF THE ‘SELF’: THE FIVE VĀYUS OR VITAL FUNCTIONS**

*Purusha* or *Ātmā*, manifesting itself as *jīvātmā* in the living form of the individual being, is regarded, according to the *Vedānta*, as clothing itself in a series of 'envelopes' (*koshas*) or successive vehicles, representing so many phases of its manifestation; it would be altogether wrong, however, to compare these envelopes to 'bodies', since it is the last phase only that belongs to the corporeal order. It is important to note, moreover, that *Ātmā* cannot, strictly speaking, be said to be actually contained within such envelopes, since, by its very nature, it is not susceptible of any limitation and is in no way conditioned by any state of manifestation whatsoever.

The first envelope (*anandamaya-kosha*, the suffix *maya* signifying 'made of' or 'consisting of' whatever is denoted by the word to which it is joined) is none other than the totality of the possibilities of manifestation which *Ātmā* comprises within itself, in its 'permanent actuality' in the principal and undifferentiated state. It is called 'made of Beatitude' (*Ananda*), because the 'Self', in this primumordial state, enjoys the plenitude of its own being, and it is in no way really distinct from the 'Self'; it is superior to conditioned existence, which presupposes it, and it is situated at the level of pure...
Being; that is why it is regarded as characteristic of Ishvara. Here, therefore, we are in the formless order; it is only when this envelope is viewed in relation to formal manifestation, and insofar as the principle of the latter is contained in it, that it can be said to represent principal or causal form (kārana-shāratra), that by which form will be manifested and actualized in the succeeding stages.

The second envelope (viṣṇu-nāmaya-kosha) is formed by the directly reflected Light (in the intelligible sense) of integral and universal Knowledge (Jñāna, the particle vi implying the distinctive mode); it is composed of five ‘elementary essences’ (tanmātras), ‘conceivable’ but not ‘perceptible’, in their subtle state; and it arises out of the conjunction of the higher intellect (Buddhi) with the principal faculties of perception proceeding respectively from the five tanmātras, and the external development of which consists of the five senses of the corporeal individuality. The third envelope (manomaya-kosha), in which the constituents of the preceding envelope are linked up with the inward sense (manas), especially brings into play the mental consciousness or thinking faculty; this, as we have previously explained, belongs exclusively to the individual and formal order, and its development arises from the radiation,

2. Whereas the other designations (those of the four following envelopes) can be considered as applicable to jñānamaya, the envelope called anandamaya applies not only to Ishvara but also, by transposition, even to Paramātma or the Supreme Brahma, and that is why it is said in the Taittirīya Upanishad ii. 5. 2: ‘Differing from that which consists of distinctive knowledge [viṣṇu-nāmaya] is the other interior Self [anyo’ntara Atma] which consists of Bliss [anandamaya]. Cf. Brahma-Sūtras 1. 1.12–13.

3. The Sanskrit word jñāna has the selfsame root as the Greek ἴδων, which it also shares with the Latin co-gnoscere; it expresses an idea of ‘production’ or ‘generation’ because the being ‘becomes’ whatever it knows and realizes itself through that knowledge.

4. It is starting from this second envelope that the term shartra properly applies, especially if this word, as interpreted by the methods of Nirukta, be given the sense of ‘dependent upon the six [principles]’; that is to say upon Buddhi (or upon ahaṅkāra, which is derived directly from it and is the first principle in the individual order) and the five tanmātras (Māṇava-Dharma-Shāstra 1.17).

5. By this expression we mean something representing a more advanced degree of determination than individual consciousness pure and simple: it might be said to be the resultant of the union of manas and ahaṅkāra.

6. We refer the reader to the previous footnote concerning the various applications of the Hebrew word Ruahh, which corresponds rather closely to the Sanskrit vāyu.

7. The root an occurs again, with similar meaning in the Greek ἀήθος, ‘breath’ or ‘wind’, and in the Latin anima, ‘soul’. the original and proper meaning of which is precisely ‘vital breath’.
the other hand, of the various resultant vital movements, of which the circulation of the blood is the corresponding movement in the bodily organism; (iv) expiration (udāna), which projects the breath, while transforming it, beyond the limits of the restricted individuality (that is, the individuality reduced simply to those modalities which are commonly developed in all men) into the sphere of the possibilities of the extended individuality, viewed in its integrality; and (v) digestion, or inner substantial assimilation (samaṇa), by which the elements absorbed become an integral part of the individuality. It is clearly stated that all this is not purely a matter of the operation of one or of several bodily organs; it is, in fact, easy to realize that it refers not merely to the analogically corresponding physiological functions, but rather to vital assimilation in the widest possible sense.

The corporeal or gross form (sthūla-sharīra) is the fifth and last envelope, the one which, for the human state, corresponds to the most external mode of manifestation; it is the alimentary envelope (anamaya-kosha), composed of the five sensible elements (bhūtas) out of which all bodies are constituted. It assimilates to itself the combined elements received in nutriment (anna, a word derived from the verbal root ad, 'to eat'), secreting the finer parts, which remain in the organic circulation, and excreting or rejecting the coarser, excepting those however which are deposited in the bones. As a result of this assimilation the earthy substances become the flesh, the watery substances, the blood, and the igneous substances, the fat, the marrow, and the nervous system (phosphoric matter); for there are corporeal substances in which the nature of one element or another predominates, although they are all formed by the union of the five elements.

Every organic being, dwelling in such a bodily form, possesses, in a more or less complete degree of development, the eleven individual faculties of which we have spoken above, and, as we have also seen, these faculties are manifested in the bodily organism by means of the eleven corresponding organs (avayavas, a name which is also applied in the subtle state, but only by analogy with the gross state). According to Shankarachārya, three classes of organic beings may be distinguished, according to their mode of reproduction: (i) the viviparous (jīvaja, or yonija, or again, jarāyujja), such as man and the other mammals; (ii) the oviparous (andaja), such as birds, reptiles, fish, and insects; and (iii) the germiniparous (udbhijja), which includes both the lower animals and plants, the former mobile, being born chiefly in water, while the latter, which are immobile, are usually born in the earth; however, according to sundry passages in the Veda, nutriment (anna), that is to say vegetation (oshadhi), also proceeds from water, since it is rain (varsā) which fertilizes the earth.

8. It should be observed that the word 'expire' means both 'to eject the breath' (in respiration) and 'to die' (in respect of the bodily part of the human individuality); both these meanings are related to the udāna in question.
10. This root is the same as that of the Latin edere, and also, though in more altered form, that of the English eat and the German essen.
12. Commentary on the Brahma-Sūtras III.1.20 & 21. Cf. Chhandogya Upanishad v1.3.1; also Aitareya Upanishad v.3. The latter text, besides the three classes of living beings mentioned in the others, mentions a fourth class, namely those born of damp heat (svedaja); but this class can be linked on to the seed-born class.
13. See especially Chhandogya Upanishad 1.1.2: 'Vegetables are the essence [rasa] of water'; v.6.2 and v11.4.2: anna arises or proceeds from varṣa. The word rasa literally means 'sap' and it has been seen earlier on that it also signifies 'taste' or 'savor'; moreover, in French also the words sève and saveur, like the corresponding English words, have the same root (sap), which is at the same time that of the Latin sapere (French savoir) by reason of the analogy which exists between nutritive assimilation in the bodily order and cognitive assimilation in the mental and intellectual orders. It should also be noted that the word anna sometimes refers to the element earth itself, which is the last in the order of development, and which is also derived from the element water which immediately precedes it (Chhandogya Upanishad v1.2.4).
At this stage we need to emphasize a point of fundamental importance. All the principles or elements we have been speaking about, which are described as distinct, are indeed so when viewed from the individual standpoint, but only from that standpoint, for in reality they merely constitute so many manifested modalities of the 'Universal Spirit' (Ātmā). In other words, although accidental and contingent insofar as they are manifested, they serve as the expression of certain essential possibilities of Ātmā (those which, from their very nature, are possibilities of manifestation); and these possibilities, in principle and in their basic reality, are in no wise distinct from Ātmā. This is why they must be considered, in the Universal (and no longer in relation to individual beings), as being in reality Brahma itself, which is 'without duality', and outside of which there is nothing, either manifested or unmanifested.1

Besides, anything which leaves something outside itself cannot be infinite, being limited by that very thing which it excludes; and thus the World, taking this expression as meaning the whole of universal manifestation, is only distinguishable from Brahma in an illusory manner, while on the contrary Brahma is absolutely 'distinct from that which It pervades',2 that is, from the World, since we cannot apply any of the determinative attributes to It which pertain to the World, and since universal manifestation in its entirety is rigorously nil in relation to Its Infinity.

As we have already pointed out elsewhere, this irreciprocity of relationship entails the formal condemnation of 'pantheism', as well as of 'immanentism' of any sort; and the Bhagavad-Gītā also asserts the same thing very clearly in the following terms: 'All beings are in Me and I am not Myself in them. . . . My Being upholds beings and, without being Itself in them, it is through It that they exist.'3 Again, one may say that Brahma is the absolute Whole for the very reason that it is infinite, while, on the other hand, though all things are in Brahma, they are not Brahma when viewed from the standpoint of distinction, that is to say in their quality of relative and conditioned things, their existence as such being moreover nothing but an illusion from the standpoint of supreme Reality. That which is asserted of things and which cannot apply to Brahma is but an expression of relativity, and at the same time, this relativity being illusory, all distinction is equally illusory, because one of its terms vanishes when brought into the presence of the other, nothing being capable of entering into correlation with the Infinite. That which is asserted of things and which cannot apply to Brahma is but an expression of relativity, and at the same time, this relativity being illusory, all distinction is equally illusory, because one of its terms vanishes when brought into the presence of the other, nothing being capable of entering into correlation with the Infinite. It is solely in principle that all things are Brahma, but also it is that alone which constitutes their fundamental reality; this it is that must never be lost sight of if there is to be a proper understanding of what is to follow.4

No distinction [bearing upon contingent modifications, such as the distinction between the agent, the act, and the end or the

1. Muhyi 'd-Din ibn al-'Arabi, in his Treatise on Unity (Risālat-al-Aḥadiyyah), says in the same sense: 'Allah—may He be exalted—is exempt from all comparison as well as from every rival, contrast, or opposition.' There is moreover perfect agreement in this respect also between the Vedānta and Islamic esoterism.
2. See the text of the treatise on the Knowledge of the Self (Ātma-Bodha) of Shankarāchārya, which will be quoted further on.
3. Bhagavad-Gītā Ṣx. 4 and 5.
4. We will here quote a Taoist text in which the same ideas are expressed: 'Do not inquire whether the Principle is in this or in that; It is in all beings. That is why It is given the epithet of great, supreme, entire, universal, total. . . . That which caused beings to be beings is not itself subject to the same laws as beings. That
result of that act] invalidates the essential unity and identity of Brahma as cause [kārana] and effect [kārya]. The sea is the same as its waters, and does not differ (in nature) in any way from them, although the waves, the foam, the spray, the drops, and other accidental modifications which these waters undergo exist apart or conjointly as different from one another [when considered distinctively, either under the aspect of succession or of simultaneity, but without their nature ceasing on that account to be the same]. An effect is not other [in essence] than its cause [although the cause, on the contrary, is more than the effect]; Brahma is one [as Being] and without duality [as Supreme Principle]; Itself, It is not separated [by any limitations] from its modifications [formal as well as formless]; It is Ātmā [in every possible state], and Ātmā [in itself, in the unconditioned state] is It [and not other than It]. The same earth yields diamonds and other precious minerals, crystal rocks and common worthless stones; the same soil produces a diversity of plants offering the

deckless and infinite... As for manifestation, the Principle produces the succession of its phases, but is not that succession [nor involved in that succession]. It is the author of causes and of effects [the prime cause], but is not the causes and effects [particular and manifested]. It is the author of condensations and dissipations [births and deaths, changes of state], but is not itself condensation or dissipation. Everything proceeds from It and is modified by and under Its influence. It is in all beings, by the determining of a norm; but It is not identical with beings, being neither differentiated nor limited. (Chuang Tzu, chap. 22; French translation by Father Wieger, pp. 395-396).

5. It is as nirguna that Brahma is kārana, and as saguna that it is kārya; the former is the 'supreme' or Para-Brahma and the latter is the 'Non-supreme' or Apara-Brahma (who is Jñāna); but it in no wise follows that Brahma ceases in any way to be 'without duality' (Advaita), for the 'Non-Supreme' itself is but illusory insofar as It is distinguished from the 'Supreme', just as the effect is not truly and essentially different from the cause. It should be noted that Para-Brahma and Apara-Brahma ought never to be translated respectively as 'superior Brahma' and 'inferior Brahma', for such expressions presuppose a comparison or a correlation which cannot possibly exist.

6. This comparison with the sea and its waters shows that Brahma is here envisaged as Universal Possibility, which is the absolute totality of particular possibilities.

7. This is the very formula of the 'Supreme Identity', in the most concise form that it is possible to give to it.

8. It must not be forgotten, in order to resolve this apparent difficulty, that we are here well beyond the distinction of Purusha and Prakriti and that both these two, being already unified in Being, are with all the more reason included in the Supreme Brahma, and hence appear as two complementary aspects of the Principle, if one is permitted to use such an expression, for it is indeed relative to our own conception only that they constitute two aspects: insofar as It is modified, that is the aspect analogous to Prakriti: insofar, however, as It is unmodified, that is the aspect analogous to Purusha; and it will be noticed that the latter answers more profoundly and more adequately than the former to the supreme Reality in its changelessness. That is why Brahma itself is Purushottama, whereas Prakriti only represents, in relation to manifestation, Its Shakti, that is to say Its 'productive Will', which is properly speaking Its 'Omnipotence' ('actionless' activity as regards the Principle, becoming passivity as regards the manifestation). It should be added that when this conception is thus transposed beyond Being, it is no longer with 'essence' and 'substance' that we are dealing, but rather with the Infinite and Possibility, as we hope to explain on another occasion; it is also what the Far-Eastern tradition calls 'active perfection' (Khien) and 'passive perfection' (Khouen) which moreover coincide in Perfection in the absolute sense.
viewed thus, that is because it comprises all possibilities within itself, without their being in any sense parts of itself. 9

Diverse changes [of condition and modes of existence] are presented to the same [individually] soul while dreaming [and in this state perceiving internal objects which belong to the domain of subtle manifestation]; 10 diverse illusory forms [corresponding to different modalities of formal manifestation, other than the corporeal modality] are assumed by this same subtle being without in any respect altering its unity [such illusory forms, mayāvī-rūpa being considered as purely accidental and not belonging, of themselves, to the being who assumes them, so that the latter must be regarded as unaffected by this merely apparent modification]. 11 Brahma is almighty [since it contains all things in principle], capable of every activity [although 'actionless', or rather on that very account], without organ or instrument of action of any sort; therefore no motive or special end [such as pertains to an individual act] other than its own will [which is indistinguishable from its omnipotence] 12 must be assigned to

Shakti can only be an aspect of the Principle, and, if it is distinguished from the Principle in order to be 'separatively' considered, it is then nothing but the 'Great Illusion' (Mahā-Moha), that is to say Mayā in its inferior and exclusively cosmic sense.

13. This is precisely the idea of Dharma, conceived as 'conformity to the essential nature of beings', applied to the entire order of universal Existence.

14. 'O Principle! Thou who bestowest on all beings that which befits them, Thou hast never claimed to be called equitable. Thou whose benefits extend to all times, Thou hast never claimed to be called charitable. Thou who wast before the beginning, and who dost not claim to be called venerable; Thou who enfoldest and supportest the Universe, producing all its forms, without claiming to be called skilful; it is in Thee that I move...:' (Chuang Tzu, chap. 6; Father Wieger's French translation, p.261).

'It can be said of the Principle only that It is the origin of everything and that It influences all while remaining indifferent. (idem. chap. 22; ibid., p.399).

'The Principle, indifferent, impartial, lets all things follow their course without influencing them. It claims no title [no qualification or attribution whatsoever]. It acts not. Doing nothing, there is nothing It does not do (id., chap. 25; ibid., p.437).

15. Brahma-Sūtras 11.1.13-37. Cf. Bhagavad-Gītā 11.4-8: 'It is 1, devoid of every sensible form, who have developed all this Universe... Immutable in my productive power [Shakti, who here is called Prokṛiti because it is considered in relation to manifestation], I produce and reproduce [throughout all the cycles] the multitude of beings, without a determinate aim, and by the sole virtue of that productive power.'
temporal condition viewed under its three modalities of past, present, and future] is also truly Omkāra. Assuredly, this Ātmā [of which all things are but the manifestation] is Brahma, and this Ātmā [relatively to the various states of the being] has four conditions [pādas, a word signifying literally 'feet']; in truth, all this is Brahma.16

'All this', (as moreover the continuation of this latter text, which we shall give later on, clearly shows), must be understood as referring to the different modalities of the individual being regarded in its integrality, as well as to the non-individual states of the total being; that is what is meant here by the conditions of Ātmā, although, in itself, Ātmā is truly unconditioned and never ceases to be so.

11

THE DIFFERENT CONDITIONS OF ĀTMĀ IN THE HUMAN BEING

We will now enter upon a more detailed study of the different conditions of the individual being residing in the living form, which, as previously explained, includes the subtle form (sūkshma-shārīra or linga-shārīra) on the one hand and the gross or bodily form (sthūla-shārīra) on the other. The conditions we are referring to must not be confused with that particular condition which we have already noted as being special to each individual, distinguishing him from all other individuals, nor are they connected with that aggregate of limiting conditions defining each state of existence taken separately. In this instance we are referring exclusively to the various states, or, if it be preferred, the various modalities to which, in a perfectly general way, any single individual being is subject, whatever the nature of that being may be. These modalities, taken as a whole, can always be related both to the gross and to the subtle state, the former being confined to the bodily modality and the latter comprising the remainder of the individuality (there is no question here of the other individual states, since it is the human state in particular that we are considering). What is beyond these two states no longer belongs to the individual as such; we are referring to what may be called the 'causal' state, that is to say the state which corresponds to kārana-shārīra and which belongs consequently to the universal and formless order. With this causal state, moreover, though we are no longer in the realm of individual existence, we are still in the realm of Being: therefore, we also need to envisage,

beyond Being, a fourth, absolutely unconditioned, principal state. Metaphysically, all these states, even those which belong strictly to the individual, are related to Atmā, that is to say to the personality, since it is this alone which constitutes the fundamental reality of the being, and since every state of that being would be purely illusory if one attempted to separate it from Atmā. The being's different states, whatever their nature, represent nothing but possibilities of Atmā: that is why it is possible to speak of the various conditions in which the being finds itself in the truest sense conditions of Atmā, although it must be clearly understood that Atmā in itself is in no way affected thereby and does not on that account cease to be unconditioned, in the same way that it never becomes manifested, although it is the essential and transcendent principle of manifestation in all its modes.

Disregarding for the moment the fourth state, to which we shall return later, the first three states are: the waking state, corresponding to gross manifestation; the dream state, corresponding to subtle manifestation; and deep sleep, which is the 'causal' and formless state. Besides these three states another is sometimes mentioned, that of death, and even a further one, the state of ecstatic trance, considered as intermediate (sandhyā) between deep sleep and death, in the same way that dreaming is intermediate between waking and deep sleep. These two last states, however, are not generally reckoned as separate since they are not essentially distinct from that of deep sleep, which is really an extra-individual state, as we have just explained, and in which the being returns likewise into non-manifestation, or at least into the formless, the living soul (jīvātmā) withdrawing into the bosom of the Universal Spirit (Atmā) along the path which leads to the very center of the being, where is the seat of Brahma.  

1. The word sandhyā (derived from sandhi, the point of contact or of junction between two things) is also used, in a more ordinary sense, to describe the twilight (morning and evening) similarly considered as intermediate between day and night; in the theory of cosmic cycles it indicates the interval between two Yugas.
2. Concerning this state, see Brahma-Sūtras II.2.10.

For the detailed description of these states we have only to turn to the text of the Māndūkyya Upanishad, the opening passage of which we have already cited, with the exception of one phrase, however, the first of all, which runs: 'Om, this syllable (akṣara) is everything that is: its explanation follows.' The sacred monosyllable Om, which expresses the essence of the Veda, is here taken as the ideographic symbol of Atmā. This syllable, composed of three letters (mātrās, these letters being a, u, and m, the first two contracting into o), has four elements, the fourth of which, being none other than the monosyllable itself regarded synthetically under its principal aspect, is 'non-expressed' by any letter (amātra), being prior to all distinction in the 'indissoluble' (akṣara); similarly, Atmā has four conditions (pādas), the fourth of which is not really a special condition at all but is Atmā regarded in itself, in an absolutely transcendent manner independently of any condition and which, as such, is not susceptible of any representation. We will now go on to explain what the text we referred to says on the subject of each of these conditions of Atmā, starting from the last degree, that of manifestation, and working back to the, supreme, total, and unconditioned state.

4. The word akṣara etymologically means 'indissoluble' or 'indestructible'; if the syllable is referred to by means of this word, this is because the syllable (and not the alphabetical letter) is looked upon as constituting the primitive unit and fundamental element of language; moreover, every verbal root is syllabic. A verbal root in Sanskrit is called dhātu, a word properly meaning 'seed', because, through the possibilities of multiple modification that it carries and contains in itself, it is indeed the seed which, by its development, gives birth to the entire language. It may be said that the root is the fixed and invariable element in a word, representing its fundamental and immutable nature, to which secondary and variable elements come to be added, representing accidents (in the etymological sense) or modifications of the principal idea.
5. Cf. Chhandogya Upanishad 1.1 and II.23; also Brihadāraṇyaka Upanishad V.1.1.
6. In Sanskrit, the vowel o is actually formed from the combination of a and u, just as, the vowel e is formed from the union of a and i. Likewise, in Arabic, the three vowels a, i, and u are the only ones that are considered fundamental and really distinct.
The Waking State or the Condition of Vaishvānara

The first condition is Vaishvānara, the seat of which is in the waking state (jāgaritasthāna), which has knowledge of external [sensible] objects, and which has seven members and nineteen mouths and the world of gross manifestation for its province.  

Vaishvānara, as the etymological derivation of the word indicates, is what we have called 'Universal Man', regarded however more especially in the complete development of his states of manifestation and under the particular aspect of that development. Here the extent of this term appears to be limited to one of these states only.

1. It is obvious that this and all similar expressions, such as abode, residence, etc., must always be understood in this context symbolically and not literally, that is to say they must be taken as indicating not a place but rather a modality of existence. The use of a spatial symbolism is moreover extremely widespread, a fact which can be accounted for by the actual nature of the conditions governing corporeal individuality, and which dictate the terms in which any translation of the truths that concern other states of the being must necessarily be expressed, insofar as such expression is possible. The term sthāna has as its exact equivalent the word 'state' (status), for the root śāna reappears in the Latin stare and its derivatives, with the same meanings as in Sanskrit.

2. Maṇḍūkya Upanishad 1.3.

3. On this derivation, see Shankaracharya's commentary on the Brahma-Sūtras 1.2.28: it is Ātmā who is both 'all' (viśnu) when He appears as the personality, and 'man' (nara) when he appears as the individuality (that is to say vihāma). Vaishvānara is therefore a title which is properly befitting to Ātmā; on the other hand it is also a name of Agni, as we shall see further on (cf. Shatapata Brāhmaṇa).

4. In this connection nara or nri is man considered as an individual belonging to the human species, whereas māna is more exactly man in his capacity as a thinking being, that is to say as a being endowed with the mental faculty, which is moreover the essential attribute inherent to his species and the one by which the nature of this species is characterized. On the other hand, the name Nara is nonetheless capable of being transposed analogically so as to be identified with Purusha; and thus it comes about that Viṣṇu is sometimes referred to as Narottama or 'Supreme Man', a name which must not be taken as implying the least trace of anthropomorphism, any more than the conception of 'Universal Man' under all its aspects; and this is true precisely in virtue of this transposition. We cannot here undertake an investigation of the manifold and complex meanings implied in the word nara; as for the nature of the species, a whole special study would be needed to deal adequately with the developments to which it may give rise.

5. It would be illuminating to establish points of concordance with the conception of 'adamic' nature in the Jewish and Islamic traditions, a conception which...
After what has just been said it will be easy for us to explain the significance of the seven members mentioned in the *Manḍūkya Upanishad* and which form the seven principal parts of the 'macro-cosmic' body of *Vaishvānara*. Taking them in order: (i) the assemblage of the higher luminous spheres, that is to say of the higher states of being (considered however in this instance solely in their relationship with the particular state in question), is compared with the part of the head containing the brain, for the brain in fact corresponds organically with the 'mental' function, which is but a reflection of the intelligible Light or of the supra-individual principles; (ii) the sun and the moon, or more exactly the principles represented in the sensible world by these two luminaries,\(^6\) are the two eyes; (iii) the igneous principle is the mouth;\(^7\) (iv) the directions of space (dish) are the ears;\(^8\) (v) the atmosphere, that is to say the cosmic environment whence the 'vital breath' (prāna) proceeds, corresponds to the lungs; (vi) the intermediate region (*Antariksha*), extending between the Earth (*Bhū* or *Bhūmi*) and the luminous spheres or the heavens (*Śvāra* or *Śvarga*) and considered as the region where forms (still potential in relation to the gross state) are transposed in order to make them applicable to the entirety of the states of universal manifestation, *Antariksha* is identified with *Bhūvas*, the middle term of the *Trikāla* or trichotomization, whereas the third represents, in this division, the whole of the higher states.\(^9\) (vii) and finally the earth, that is to say, symbolically, the final term in actuation of the entire corporeal manifestation, corresponds to the feet, which are taken here as the emblem of the whole lower portion of the body. The relationship of these various members to one another and their functions in the cosmic whole to which they belong is analogous (but not identical, be it understood) with the relationship between the corresponding parts of the human organism. It will be noticed that no mention is made here of the heart because its direct relationship with universal Intelligence places it outside the sphere of the individual functions properly so called, and because this 'seat of *Brahma*' is really and truly the central point both in the cosmic and in the human orders, whereas everything pertaining to manifestation, and above all to formal manifestation, is external and 'periphrastic', if one may so express it, belonging exclusively to the circumference of the 'wheel of things'.

In the condition we are describing, Ātma, as *Vaishvānara*, becomes conscious of the world of sensible manifestation (considered also as the sphere of that aspect of the 'non-supreme' *Brahma* which is called *Vīraṅg*). It does so by means of nineteen organs, which are described as so many mouths, because they are the 'entrance-ways' of knowledge for everything belonging to this particular domain; moreover, the intellectual assimilation which operates in elaborated, corresponds to the stomach;\(^9\) (vii) and finally the earth, that is to say, symbolically, the final term in actuation of the entire corporeal manifestation, corresponds to the feet, which are taken here as the emblem of the whole lower portion of the body. The relationship of these various members to one another and their functions in the cosmic whole to which they belong is analogous (but not identical, be it understood) with the relationship between the corresponding parts of the human organism. It will be noticed that no mention is made here of the heart because its direct relationship with universal Intelligence places it outside the sphere of the individual functions properly so called, and because this 'seat of *Brahma*' is really and truly the central point both in the cosmic and in the human orders, whereas everything pertaining to manifestation, and above all to formal manifestation, is external and 'periphrastic', if one may so express it, belonging exclusively to the circumference of the 'wheel of things'.

---

6. Here one might recall the symbolical meanings which the sun and moon bear in the Western Hermetic tradition and in the cosmological theories that the alchemists based on it; in neither case must the designation of these heavenly bodies be taken literally. It should also be observed that the present symbolism differs from that previously alluded to, according to which the sun and the moon correspond respectively to the heart and the brain; here again, long explanations would be necessary in order to show how these different points of view are reconciled and harmonized in the whole framework of analogical correspondences.

7. We have already mentioned that *Vaishvānara* is occasionally a name of Agni, who is then chiefly considered in the guise of animating warmth, therefore in the form in which he is dwelling in living things; we shall have occasion to refer to this again at a later stage. Furthermore, *mukhya-prāna* is both the breath of the mouth (*mūkha*) and the principal vital act (it is in the latter sense that the five *vāyus* are its modalities); and warmth is intimately associated with life itself.

8. One may notice the remarkable relationship between this symbolism and the physiological function of the semi-circular canals.

9. In one sense, the word *Antariksha* also includes the atmosphere, which is then considered as the medium of diffusion of light; it is also worth noting that the agent of that diffusion is not Air (*Vāyu*) but Ether (*Ākāśa*). When the terms are transposed in order to make them applicable to the entirety of the states of universal manifestation, *Antariksha* is identified with *Bhūvas*, the middle term of the *Trikāla* or trichotomization, whereas the word being taken however in a much more extended and less determinate sense than in the preceding case. The names of the three worlds, *Bhū*, *Bhūvas*, and *Śvar* are the three *vyāhritis*, words which are usually uttered after the monosyllable *Om* in the Hindu rites of *Sandhyā-pāsana* (a meditation repeated in the morning, at midday and in the evening). It is noticeable that the first two of the three names derive from the same root, because they refer to modalities of the same state of existence, namely that of human individuality, while the third represents, in this division, the whole of the higher states.
knowledge is often compared symbolically with the vital assimilation effected by nutrition. These nineteen organs (also including in that term the corresponding faculties, in accordance with our previous explanation of the general significance of the word indriya) are: the five organs of sensation, the five organs of action, the five vital breaths (vāyus), the 'mental' faculty or the inward sense (manas), the intellect (Buddhi, considered here exclusively in its relation to the individual state), thought (chitta), conceived as the faculty which gives form to ideas and which associates them one with another, and, finally, individual consciousness (ahaṅkāra): these are the faculties which we have already studied in detail. Each organ and each faculty of every individual belonging to the domain in question, that is to say to the corporeal world, proceeds respectively from its corresponding organ or faculty in Vaishvanara; of this organ and faculty it is in a certain sense one of the constituent elements, in the same way that the individual to which it belongs is an element of the cosmic whole, in which, for its part and in the place allotted to it (from the fact that it is that individual being and not another), it contributes of necessity toward making up the total harmony.10

The waking state, in which the activity of the organs and faculties in question is exercised, is described as the first of the conditions of Atmā, although the gross or corporeal modality to which it corresponds occupies the lowest degree in the order of development (prapancha) of manifestation, starting from its primordial and unmanifested principle; it marks indeed the limit of that development, at least in relation to the state of existence in which human individuality is situated. The reason for this apparent anomaly has already been explained: it is in this corporeal modality that we find the basis and point of departure, firstly of individual realization (that is to say of the full realization of the individuality in its integral extension), and afterwards of all further realization which lies beyond the individual possibilities and implies the taking possession by the being of its higher states. Consequently if, instead of placing oneself at the point of view of the development of manifestation, one places oneself, as we are doing at present, at the point of view of this realization with its various degrees, the order of which necessarily proceeds in the contrary direction, from the manifested to the unmanifested, then in that case the waking state must clearly be looked upon as in fact preceding the states of dreaming and deep sleep, which correspond respectively to the extra-corporeal modalities of the individuality and to the supra-individual states of the being.

10. This harmony is also an aspect of Dharma: it is the equilibrium in which all disequilibriums are compensated, the order which is made up of the sum of all partial and apparent disorders.
THE DREAM STATE OR CONDITION OF TAIJASA

The second condition is Taijasa [the ‘Luminous’, a word derived from Tejas, the igneous element], whose seat is in the dream state [svapna-sthana], which has knowledge of inward [mental] objects, which has seven members and nineteen mouths and whose domain is the world of subtle manifestation.1

In this state the outward faculties, while existing all the time potentially, are reabsorbed into the inward sense (manas), which is at the same time their common source, their support, and their immediate end, and which resides in the luminous arteries (nādis) of the subtle form, where it is distributed without any division of its nature in the manner of a diffused heat. The igneous element in itself, considered in its essential properties, is indeed at one and the same time light and heat; and, as the very name Taijasa applied to the subtle state indicates, these two aspects, suitably transposed (since there is no longer any question here of sensible qualities) must be found in that state also. As we have already had occasion to remark elsewhere, everything belonging to the subtle state is very closely connected with the nature of life itself, which is inseparable from heat; and it may be recalled that on this point, as on many others, the conceptions of Aristotle are in complete agreement with those of the East. As for the luminosity to which we have just alluded, it should be regarded as the reflection and diffraction of the intelligible Light in the extra-sensible modalities of formal manifestation (among which, however, it is only necessary in the present instance to consider those relating to the human state). Furthermore, the subtle form itself (sukshma-sharīra or linga-sharīra) in which Taijasa dwells is likened to a fiery vehicle,2 although this must of course be distinguished from corporeal fire (the element Tejas or that which derives from it) which is perceived by the senses of the gross form (sthūla-sharīra), vehicle of Vaishvanāra, and more particularly by sight, since visibility, necessarily presupposing the presence of light, is the sensible quality naturally belonging to Tejas; in the subtle state, however, there can no longer be any question of bhūtas, but only of the corresponding tanmātras which are their immediate determining principles.

As to the nādis or arteries belonging to the subtle form, they should on no account be confused with the corporeal arteries by means of which the circulation of the blood is effected; physiologically, they correspond rather to the ramifications of the nervous system, for they are expressly described as luminous; moreover, just as fire is in a sense polarized into heat and light, so the subtle state is linked to the corporeal state in two different and complementary ways, through the blood as to the caloric and through the nervous system as to, the luminous quality.3 At the same time it must be

1. Māndūkya Upanishad 1.4. In this text the subtle state is called pravivikta, literally ‘predistinguished’, because it is a state of distinction that precedes gross manifestation; the word also means ‘separate’, because the ‘living soul’, when in the dream state, is to all intents confined within itself, contrary to what happens in the waking state, which is ‘common to all men’.

2. Elsewhere in this connection we have recalled the ‘chariot of fire’ upon which the prophet Elijah was taken up to heaven (2 Kings 2:2).

3. We have already mentioned, in describing the constitution of the annamaya-kosha, which is the bodily organism, that the elements of the nervous system originate from the assimilation of fiery substances. As for blood, being liquid, it is formed originally from watery substances, but these must have undergone an elaboration due to the action of the vital heat, which is the manifestation of Agni Vaishvanāra, and they only play the part of a plastic support that serves for the fixation of an element of igneous nature: fire and water here represent, in relation to one another, ‘essence’ and ‘substance’ in a relative sense. One might easily compare this with certain alchemical theories, such as those which introduce the principles
clearly understood that between the nadis and the nerves there is correspondence only and not identification, since the former are not corporeal and we are really concerned with two different spheres within the integral individuality. Similarly, when a relationship is established between the functions of these nadis and respiration, because respiration is essential for maintaining life and corresponds in a real way to the principal vital act, it should not be concluded on that account that they can be represented as canals of some sort in which the air circulates; this would amount to confusing the 'vital breath' (prana), which properly belongs to the order of subtle manifestation, with a bodily function. It is sometimes said that the total number of nadis is seventy-two thousand; according to other texts, however, it is given as seven hundred and twenty million; but the difference here is more apparent than real, since these numbers are meant to be taken symbolically and not literally, as is usual in such cases; and this will be apparent if one observes their obvious connection with the cyclic numbers. Further on we shall

4. We are alluding here more especially to the teachings connected with Hatha-Yoga, that is to say to the methods preparatory to 'Union' (Yoga in the proper sense of the word), which are based on the assimilation of certain rhythms, chiefly bound up with breath-control. What the Islamic esoteric schools call dhikr fulfills exactly the same function, and often indeed the actual proceedings resorted to are quite similar in both traditions, a fact, however, which is not to be taken as evidence of any borrowing: the science of rhythm, in fact, may well be known in two different quarters quite independently, for we are dealing here with a science having its own definite object and corresponding to a clearly defined order of reality, although this science is quite unknown to Westerners.

5. This confusion has actually been perpetrated by certain orientalists, whose understanding is doubtless unable to operate outside the limits of the corporeal world.

6. The fundamental cyclic numbers are: 72 = 2^3 x 3^2; 108 = 2^2 x 3^3; 432 = 2^4 x 3^3 = 72 x 6 = 108 x 4; they apply for example to the geometrical division of a circle (360 = 72 x 5 = 12 x 30) and to the duration of the astronomical period of the precession of the equinoxes (72 x 360 = 432 x 60 = 25,920 years). These are their most immediate and elementary applications, but we cannot enter at present into the properly

symbolical considerations that arise out of the transposition of these data into different orders.

But, however that may be, the absolutely real (param-ārthika) is the Self (Ātma) alone; it is utterly unattainable by any conception that confines itself to the consideration of external and internal objects, knowledge of which constitutes respectively the waking and dream states; certain heterodox schools, which did in fact restrict their attention in this way to the aggregate of these two states, thereby condemned themselves to remain wholly enclosed within the limits of formal manifestation and the human individuality.

By reason of its connection with the mental faculty, the realm of subtle manifestation can be described as an ideal world, to distinguish it from the sensible world which is the realm of gross manifestation. This term however should not be taken in the sense of Plato's 'intelligible world', since his 'ideas' are possibilities in the principal state, which must be referred to formless being (in spite of the over-imaginative expressions in which Plato often enveloped his thoughts): in the subtle state we are still only concerned with ideas clothed in forms, since the possibilities which this state comprises do not extend beyond individual existence. Above all it is important not to be misled into imagining an opposition here of the kind which certain modern philosophers claim to establish between 'ideal' and 'real'; such an opposition is really quite meaningless. Everything that is, under whatever mode it may happen to exist, is real for that very reason and possesses precisely the type and degree of reality consonant with its own nature: something consisting in ideas (and that is all the meaning properly attributable to the word 'ideal') is neither more nor less real than on that account, since the possibilities this state comprises do not extend beyond individual existence. Above all it is important not to be misled into imagining an opposition here of the kind which certain modern philosophers claim to establish between 'ideal' and 'real'; such an opposition is really quite meaningless. Everything that is, under whatever mode it may happen to exist, is real for that very reason and possesses precisely the type and degree of reality consonant with its own nature: something consisting in ideas (and that is all the meaning properly attributable to the word 'ideal') is neither more nor less real than on that account, since the possibilities this state comprises do not extend beyond individual existence.

In the order of universal manifestation, just as the sensible world in its entirety is identified with Virāj, so this ideal world of which we have been speaking is identified with Hiranyagarbha (literally, the 'Golden Embryo'), which is Brahman (determination of Brahman as effect, kārya) enveloping Himself in the 'World Egg' (Brahmāṇḍa), out of which there will develop, according to its mode of realization, the whole formal manifestation which is contained therein virtually as a conception of this Hiranyagarbha, primordial germ of the cosmic Light. Furthermore, Hiranyagarbha is described as the 'synthetic aggregate of life' (jīva-ghana); indeed, it can really be identified with 'Universal Life' by reason of the previously mentioned connection between the subtle state and life, which, even when considered in its entire extension (and not limited to organic or corporeal life only, to which field the physiological point of view is restricted), is nevertheless but one of the special

9. The subtle state is properly the realm of यौगिक and not that of वृद्ध; the latter in reality corresponds to Buddhī, that is to say to the supra-individual intellect.
conditions of the state of existence to which human individuality belongs. The sphere of life therefore does not extend beyond the possibilities comprised within that state, which, be it understood, should here be viewed integrally and taken as including the subtle modalities as well as the gross modality.

Whether one places oneself at the 'macrocosmic' point of view, as we have just done, or at the 'microcosmic' point of view, which we adopted to begin with, the ideal world in question is conceived by faculties corresponding analogically to those by which the sensible world is perceived, or if it be preferred, which are the same faculties as these in principle (since they are still individual faculties), but considered under another mode of existence and at another degree of development, their activity being exercised in a different realm. This explains how Ātmā in this dream state, that is to say under the aspect of Tājāsa, comes to have the same number of members and mouths (or instruments of knowledge) as in the waking state under the aspect of Vaishvānara.\textsuperscript{17}

There is no necessity to enumerate them a second time since the definitions we have already given can be applied equally, by means of a suitable transposition, to the two realms of gross or sensible manifestation and subtle or ideal manifestation.

17. These faculties must here be regarded as distributed in the three 'envelopes', which by their combination constitute the subtle form (vijñānamaya-kosha, manomaya-kosha and prānamaya-kosha).

---

**14 THE STATE OF DEEP SLEEP OR CONDITION OF PRĀJÑĀ**

When the being who is asleep experiences no desire and is not the subject of any dream, his state is that of deep sleep [sushupta-sthāna]: he [that is to say Ātmā itself in this condition] who in this state has become one [without any distinction or differentiation],\textsuperscript{1} who has identified himself with a synthetic whole [unique and without particular determination] of integral Knowledge [Prajñāna-ghanā],\textsuperscript{2} who is filled [by inmost penetration and assimilation] with Beatitude [ānanda], actually enjoying that Beatitude [Ānanda, as his own realm] and whose mouth [the instrument of knowledge] is [exclusively] total Consciousness [Chit] itself [without intermediary or particularization of any sort], that one is called Prājñā (He who knows above and beyond any special condition); this is the third condition.\textsuperscript{3}

1. Taoism likewise declares, 'All is one; during sleep the undistracted soul is absorbed into this unity; in the waking state, being distracted, it distinguishes diverse beings' (Chuang Tzu, chap. 11; French translation by Father Wiegèr p213).
2. 'To concentrate all one's intellectual energy as it were in one mass' is another expression of the Taoist doctrine bearing the same meaning (Chuang Tzu, chap. 4; Father Wiegèr's translation, p4). Prajñāna or integral Knowledge is here opposed to vijñāna or distinctive knowledge, which, being specially applicable to the individual or formal realm, characterizes the two preceding states; vijñānamaya-kosha is the first of the 'envelopes' in which Ātmā is clothed on entering the 'world of names and forms', that is to say when manifesting itself as jūvātmā.
3. Maṇḍākya Upanishad 1.5.
As will at once be apparent, the vehicle of Ātmā in this state is the kārana-shārīra, since this is ānandamaya-kosha: and although it is spoken of analogically as a vehicle or an envelope, it is not really something distinct from Ātmā itself, since here we are beyond the sphere of distinction. Beatitude is made up of all the possibilities of Ātmā; it is, one might say, the sum itself of these possibilities, and if Ātmā, as Prājña, enjoys this Beatitude as its rightful kingdom, that is because it is really nothing else than the plenitude of its being, as we have already pointed out. This is essentially a formless and supra-individual state; it cannot therefore have anything to do with a 'psychic' or 'psychological' state, as certain orientalists have supposed. The psychic properly speaking is in fact the subtle state; and in making this assimilation we take the word 'psychic' in its primitive sense, as used by the ancients, without concerning ourselves with the various far more specialized meanings which have been attached to it in later times, whereby it cannot be made to apply even to the whole of the subtle state. As for modern Western psychology, it deals only with a quite restricted portion of the human individuality, where the mental faculty is in direct relationship with the corporeal modality, and, given the methods it employs, it is incapable of going any further. In any case, the very objective which it sets before itself and which is exclusively the study of mental phenomena, limits it strictly to the realm of the individuality, so that the state which we are now discussing necessarily eludes its investigations. Indeed, it might even be said that that state is doubly inaccessible to it, in the first place because it lies beyond the mental sphere or the sphere of discursive and differentiated thought, and in the second place because it lies equally beyond all phenomena of any kind, that is to say beyond all formal manifestation.

This state of indifferenciation, in which all knowledge, including that of the other states, is synthetically centralized in the essential and fundamental unity of the being, is the unmanifested and 'non-developed' (aryakta) state, principle and cause (kārana) of all manifestation and the source from which manifestation is developed in the multiplicity of its different states and more particularly, as concerns the human being, in its subtle and gross states. This unmanifested state, conceived as root of the manifested (vyakta), which is only its effect (kārya), is identified in this respect with Mūla-Prakriti, 'Primordial Nature'; but in reality, it is Purusha as well as Prakriti, containing them both in its own indifferenciation, for it is cause in the complete sense of the word, that is to say both at one and the same time 'efficient cause' and 'material cause', to use the ordinary terminology, to which however we much prefer the expressions 'essential cause' and 'substantial cause', since these two complementary aspects of causality do in fact relate respectively to 'essence' and to 'substance' in the sense we have previously given to those words. If Ātmā, in this third state, is thus beyond the distinction of Purusha and Prakriti, or of the two poles of manifestation, that is simply because it is no longer situated within conditioned existence, but actually at the level of pure Being; nevertheless, Purusha and Prakriti, which are themselves still unmanifested, should be included within it and this is even in a sense true, as we shall see later on, of the formless states of manifestation as well, which it has already been necessary to attach to the Universal, since they are really supra-individual states of the being; moreover, it has to be remembered that all manifested states are contained, synthetically and in principle, within unmanifested Being.

In this state the different objects of manifestation, including those of individual manifestation, external as well as internal, are not destroyed, but subsist in principial mode, being unified by the very fact that they are no longer conceived under the secondary or contingent aspect of distinction; of necessity they find themselves among the possibilities of the 'Self' and the latter remains conscious in itself of all these possibilities, as 'non-distinguishably' beheld in integral Knowledge, from the very fact of being conscious of its own permanence in the 'eternal present'.

4. It is this which allows of the transposition in a metaphysical sense of the theological doctrine of the 'resurrection of the dead', as well as the conception of 'the glorious body'; the latter, moreover, is not a body in the proper sense of the word, but its 'transformation' (or 'transfiguration'), that is to say its transposition outside form and the other conditions of individual existence; in other words, it is the 'realization' of the permanent and immutable possibility of which the body is but a transient expression in manifested mode.
were it otherwise and were the objects of manifestation not thus to subsist principally (a supposition impossible in itself, however, because these objects would then be but a pure nothing, which could not exist at all, not even in illusory mode) there could be no return from the state of deep sleep to the states of dreaming and waking, since all formal manifestation would be irremediably destroyed for the being once it had entered deep sleep; but such a return is on the contrary always possible and does in fact take place, at least for the being who is not actually 'delivered', that is to say definitely freed from the conditions of individual existence.

The term Chit, unlike its previously mentioned derivative Chitta, must not be understood in the restricted sense of individual and formal thought (this restrictive determination, which implies a modification by reflection, being marked in the derivative by the suffix kta, which is the termination of the passive participle) but in the universal sense, as the total Consciousness of the 'Self' looked at in its relationship with its unique object, which is Ananda or Beatitude. This object, while constituting in a certain sense an envelope of the 'Self' (anandamaya-kosha) as we have already explained, is identical with the subject itself, which is Sat or pure Being and is not really distinct from it, as indeed it could not be, once there is no longer any real distinction. Thus these three, Sat, Chit, and Ananda

5. The state of deep sleep has been described as 'unconscious' by certain orientalists, who even seem tempted to identify it with the 'Unconscious' of German philosophers like Hartmann; this error doubtless arises from the fact that they are unable to conceive of any consciousness other than individual and 'psychological' consciousness; but their opinion appears nonetheless inexplicable, for it is not easy to see how, with such an interpretation, they are able to understand these terms and especially of their derivatives 'subjective' and 'objective' has varied enormously from the point of view of clarity, and generally speaking it is advisable to avoid them as far as possible.

6. The terms 'subject' and 'object', in the sense in which they are used here, cannot lead to any ambiguity: the subject is 'the knower', the object is 'the known', and their relation is knowledge itself. Nevertheless, in modern philosophy, the sense of these terms and especially of their derivatives 'subjective' and 'objective' has varied so much that they have been given almost diametrically opposed interpretations, and some philosophers have taken them indiscriminately to indicate markedly conflicting meanings; besides, their use often gives rise to considerable inconvenience from the point of view of clarity, and generally speaking it is advisable to avoid them as far as possible.

7. In Arabic we have, as equivalents of these three terms, Intellignece (Al-Aql), the Intelligent (Al-Aqil), and the Intelligible (Al-Ma'qul); the first is universal Consciousness (Chit), the second is its subject (Sat), and the third is its object (Ananda), the three being but one in Being 'which knows itself by itself'.

8. Brihataranyaka Upanishad iv.3.15; cf. Brahma-Sutras 1.3.8. See also our comments on the meaning of the word Nirvâna which will appear in a later chapter.

9. It might be said, bearing in mind the reservations that we have made concerning the use of these words, that Purusha is the 'subjective' pole of manifestation and Prakriti the 'objective' pole; Buddhi then naturally corresponds to Knowledge, which is as it were a resultant of the subject and object, or their 'common act', to use the language of Aristotle. However, it is important to note that in the order of Universal Existence it is Prakriti that 'conceives' her productions under the 'actionless'
which is co-extensive with Being, is transposed again, in the order of formless manifestation, into the ternary group distinguishable in *Buddhi* of which we have already spoken: the *Matsya-Purāṇa* which we then quoted declares that 'in the Universal, Mahat [or *Buddhi*] is *Iśvara*; and *Prajaña* is also *Iśvara*, to Whom the *kārana-shāhīta* properly belongs. It can also be said that the *Trīnurti* or ‘triple manifestation’ is only the ‘outwardness’ of *Iśvara*: in Himself the latter is independent of all manifestation, of which He is the principle, since He is Being itself: and everything that is said of *Ishvara*, as well in Himself as in relation to manifestation, can be said equally of *Prajaña*, which is identified with Him. Thus, apart from the special viewpoint of manifestation and of the various conditioned states which depend upon it within that manifestation, the intellect is not different from *Atmā*, since the latter must be considered as ‘knowing itself by itself’, for there is then no longer any reality which is really distinct from it, everything being comprised within its own possibilities; and it is in that ‘Knowledge of the Self’ that Beatitude strictly speaking resides.

This one [*Prajaña*] is the Lord [*Ishvara*] of all [*sarva*, a term which here implies, in its universal extension, the aggregate of the ‘three worlds’, that is to say of all the states of manifestation comprised synthetically in their principle]; He is omnipresent [since all is present to Him in integral knowledge and He knows directly all effects in the principial total cause, which is in no way distinct from Him]; He is the inward governor [*antaryāmi* who, residing at the very center of the being, regulates and controls all the influence of *Purusha*, whereas in the order of individual existences, on the contrary, it is the subject that knows under the action of the object; the analogy is therefore inverted in this case as in those we have previously enumerated. Lastly, if intelligence is taken as inhering in the subject (although its ‘actuality’ presupposes the presence of two complementary terms), one will be obliged to say that the universal Intellect is essentially active, while the individual intelligence is passive, at least relatively so (even though it is also active at the same time in another respect), and this is moreover implied by its ‘reflective’ character, which again is fully in agreement with Aristotle’s theories.

10. Effects subsist ‘eminently’ in their cause, as has been said by the Scholastic philosophers, and they are therefore constituents of its nature, since nothing can be found in the effects that was not to be found in the cause first of all; thus the first cause, knowing itself, knows all effects by that very fact, that is to say it knows all things in an absolutely direct and ‘non-distinctive’ manner.

11. This ‘inward governor’ is identical with the ‘Universal Ruler’ referred to in the Taoist text quoted in an earlier note. The Far-Eastern tradition also says that ‘the Activity of Heaven is actionless’; according to its terminology, Heaven (*T’ien*) corresponds to *Purusha* (considered at the various levels that we have already indicated) and Earth (*Ti*) to *Prakriti*; these terms are therefore not employed in the same sense that they must bear as constituent elements of the Hindu *Tribhuvana*.

12. In the cosmic order this can be applied to the phases of ‘out-breathing’ and ‘in-breathing’ occurring in respect of each cycle taken separately; but here it is the totality of cycles or states constituting universal manifestation that is referred to.

13. *Māṇḍūkyā* *Upanishad* 1.6.
THE UNCONDITIONED STATE OF ĀTMA

Waking, dreaming, deep sleep, and that which is beyond, such are the four states of Ātma: the greatest [mahattara] is the Fourth [Turiya]. In the first three Brahma dwells with one of Its feet; It has, three feet in the last.¹

Thus, the proportions previously established from one point of view are found reversed from another point of view: of the four feet (pādas) of Ātma, the first three, when the states of Ātma are considered distinctively, only have the importance of one from the metaphysical viewpoint, and from that same viewpoint the last is three in itself. If Brahma were not ‘without parts’ (akhanda) it might be said that only a quarter of It is in Being (including therewith universal manifestation, of which It is the principle) while Its three other quarters are outside Being.² These three other quarters may be regarded in the following manner: (i) the totality of the possibilities of manifestation insofar as they are not manifested, subsisting therefore in an absolutely permanent and unconditioned state, like everything belonging to the ‘Fourth’ (insofar as they are manifested they belong to the first two states: as manifestable they belong to the third state, principal in relation to the two former); (ii) the totality of the possibilities of non-manifestation (of which moreover we only speak in the plural by analogy, for they are obviously beyond multiplicity and even beyond unity); (iii) and lastly, the Supreme Principle of both, which is Universal Possibility, total, infinite, and absolute.³

The Sages think that the ‘Fourth’ [Chaturtha],⁴ which knows neither internal nor external objects [in a distinctive or analytical sense], nor the former and the latter taken together [regarded synthetically and in principle] and which is not [even] a synthetic whole of integral knowledge, being neither knowing nor not knowing, is invisible [adrishta, and indeed non-perceptible by any faculty at all], actionless [avyavahārya, in its changeless identity], incomprehensible [agrahṛya, since, It comprehends all], indefinable [alakṣaṇa, since It is without any limit], unthinkable [achintya, since It cannot be clothed in any form], indescribable [avyapadesya, since It cannot be qualified by any particular attribute or determination], the unique, fundamental essence [pratya-sāra] of the Self [Ātma present in all the states], without any trace of the development of manifestation [prapancha-upashama], and consequently absolutely and totally free from the special conditions of any mode, of existence whatever, fullness of Peace and Beatitude, without duality: It is Ātma [Itself, outside of and independently of any condition], [thus] It must be known.⁵

It will be noticed that everything concerning this unconditioned state of Ātma is expressed under a negative form: it is easy to understand why this must be so, since, in language, every direct affirmation is necessarily particular and determinate, the affirmation of something which excludes something else, and which thereby limits

---

1. Maitri Upanishad vii.2.
2. Pāda, which means ‘foot’ can also mean ‘quarter’.
3. Similarly, when considering the first three states, which together constitute the realm of Being, it could also be said that the first two amount to no more than a third of Being, since they only contain formal manifestation, while the third state by itself amounts to two-thirds, since it includes both formless manifestation and unmanifested Being. It is essential to note that only possibilities of manifestation enter into the realm of Being, even when considered in all its universality.
4. The two words Chaturtha and Turiya bear the same meaning and apply to the one identical state: Yad vai Chaturtham tat Turiyam, ‘assuredly that which is Chaturtha, that is Turiya’ (Brihadāraṇyaka Upanishad v.14.3).
5. Māṇḍūkya Upanishad 1.7.
the object so affirmed. Every determination is a limitation, that is to say, a negation: consequently, it is the negation of a determination which is a true affirmation and the apparently negative terms which we find here are, in their real sense, pre-eminently affirmative. So also the word 'Infinite', which has a similar form, expresses in reality the negation of all limit; it is therefore the equivalent of total and absolute affirmation, which comprises or embraces all particular affirmations, but which is not any one affirmation to the exclusion of others, precisely because it implies them all equally and 'non-distinctively': and it is in this manner that Universal Possibility contains absolutely all possibilities. Everything that can be expressed by means of an affirmative form belongs of necessity to the realm of Being, since this is itself the first affirmation or the first determination, that from which all others proceed, just as unity is the first of numbers, whence all others are derived; but here we are no longer in unity but in 'non-duality', or, in other words, we are beyond Being for the reason that we are beyond all determination, even principal.

6. It is for the same reason that this state is simply called 'the Fourth', since it cannot be characterized in any way; but this explanation, although quite plain, has escaped the orientalists and in this connection one can mention a curious example of their lack of understanding: Oltramare imagined that this name 'the Fourth' escaped the orientalists and in this connection one can mention a curious example. This name 'the Fourth' is never meant to indicate a state (avyakta), at least when one only regards the unmanifested as

6. It is for the same reason that this state is simply called 'the Fourth'; since it cannot be characterized in any way; but this explanation, although quite plain, has escaped the orientalists and in this connection one can mention a curious example of their lack of understanding: Oltramare imagined that this name 'the Fourth' showed that a 'logical construction' only was intended, because it reminded him of the fourth dimension of the mathematicians; this is an unexpected comparison to the point of view in the present instance is purely metaphysical, but it should be added that the same considerations can also apply from the theological point of view; although the latter ordinarily keeps within the limits of Being, there are those who have recognized that 'negative theology' alone is strictly valid, or in other words that only attributes which are negative in form can properly be ascribed to God. Cf. Saint Dionysius the Areopagite, Treatise on Mystical Theology, the last two chapters of which resemble the text we have just quoted in a remarkable manner, even down to the expressions used.

7. Spinoza himself has formally recognized this truth: Omnis determinatio negatio est; but it is hardly necessary to mention that his application of it is more reminiscent of the indetermination of Prakriti than of that of AtmA in its unconditioned state.

8. Our point of view in the present instance is purely metaphysical, but it should be added that the same considerations can also apply from the theological point of view; although the latter ordinarily keeps within the limits of Being, there are those who have recognized that 'negative theology' alone is strictly valid, or in other words that only attributes which are negative in form can properly be ascribed to God. Cf. Saint Dionysius the Areopagite, Treatise on Mystical Theology, the last two chapters of which resemble the text we have just quoted in a remarkable manner, even down to the expressions used.

9. Similarly, the Koran says in speaking of Allah: 'The eye cannot reach Him.' 'The Principle is reached neither by sight nor by hearing.' (Chuang Tzu, chap. 22; Father Wierger's translation, p397).

10. Here, the eye stands for the faculties of sensation and speech for the faculties of action; we have seen above that manas, by nature and function, participates in both alike. Brahma cannot be reached by any individual faculty: It cannot, like gross objects, be perceived by the senses, nor conceived by thought, like subtle objects; it cannot be expressed in sensible mode by words, nor in ideal mode through mental images.

11. Cf. the passage already quoted from the Bhagavad-Gita xv 18, according to which Paramatman transcends the destructible and even the indestructible; the destructible is the manifested and the indestructible is the unmanifested, taken in the sense that we have just explained.

12. Kena-Upnishad 1.3-5. What has been said of speech (vach) is then successively repeated, in shrutis 6-9, and in the selfsame terms, about the 'mental faculty'
Shankarachārya adds the following commentary to this passage:

A disciple who has attentively followed the exposition of the nature of Brahma must be led to suppose that he knows Brahma perfectly [at least in theory]; but, in spite of his apparent justification for thinking so, this is nevertheless an erroneous opinion. In actual fact the well established meaning of every text concerning the Vedānta is that the Self of every being who possesses Knowledge is identical with Brahma [since through that very Knowledge the 'Supreme Identity' is realized]. Now a distinct and definite knowledge is possible in respect of everything capable of becoming an object of knowledge: but it is not possible in the case of That which cannot become such an object. That is Brahma, for It is the [total] Knower, and the Knower can know other things [comprising them all within Its infinite comprehension, which is identical with Universal Possibility], but cannot make itself the object of Its own knowledge [for, in Its identity, which is not the result of any identification, one cannot make the principal distinction, as in the condition of Prajñā, between a subject and an object which are nevertheless 'the same', and It cannot cease to be itself 'all-knowing' in order to become 'all-known', which would be another itself], in the same way that fire can burn other things but cannot burn itself [its essential nature being indivisible, just as, analogically, Brahma is 'without duality']. Neither can it be said that Brahma is able to become an object of knowledge for anything other than itself, since outside itself there is nothing which can possess knowledge [all knowledge, even relative, being but a participation in absolute and supreme knowledge].

Hence it is said in the succeeding passage of the text:

If you think that you know [Brahma] well, what you know of Its nature is in reality but little; for this reason Brahma should be still more attentively considered by you. [The reply is as follows]: I do not think that I know It; by that I mean to say that I do not know It well [distinctively, as I should know an object capable of being described or defined]; nevertheless, I know It [according to the instruction I have received concerning Its nature]. Whoever among us understands the following words [in their true meaning]: 'I do not know It, and yet I know It,' verily that Man knows It. He who thinks that Brahma is not comprehended [by any faculty], by him Brahma is comprehended [for by the Knowledge of Brahma he has become really and effectively identical with Brahma itself]; but he who thinks that Brahma is comprehended [by some sensible or mental faculty] knows It not. Brahma [in itself, in Its incommunicable essence] is unknown to those who know It [after the manner of some object of knowledge, be it a particular being or Universal Being] and It is known to those who do not know It at all [as 'this' or 'that'].
SYMBOLICAL REPRESENTATION OF ĀTMĀ AND ITS CONDITIONS
BY THE SACRED MONOSYLLABLE OM

The rest of the Māṇḍūkya Upanishad is concerned with the correspondence of the sacred monosyllable Om and its elements (mātrās) with Ātmā and its conditions (pādas): it explains on the one hand the symbolical reasons for this correspondence and, on the other hand, the effects of meditation bearing both on the symbol and on what it represents, that is to say on Om and on Ātmā, the former playing the part of 'support' for attaining to knowledge of the latter. We will now give the translation of this final portion of the text; but it will not be possible to accompany it with a complete commentary, as that would carry us too far from the subject of the present study:

This Ātmā is represented by the [supreme] syllable Om, which is represented in its turn by letters [mātrās], [in such a way that] the conditions [of Ātmā] are the mātrās [of Om], and (conversely) the mātrās [of Om] are the conditions [of Ātmā]: these are A, U, and M.

Vaishvānara, whose seat is in the waking state, is [represented by] A, the first mātrā, because it is the connection [āpti, of all sounds, the primordial sound A, uttered by the organs of speech in their normal position, being as it were immanent in all the others, which are varied modifications of it and which are unified in it, just as Vaishvānara is present in all things in the sensible world and establishes their unity], and also because it is the beginning [ādi, both of the alphabet and of the monosyllable Om, as Vaishvānara is the first of the conditions of Ātmā and the basis starting from which metaphysical realization, for the human being, must be accomplished].

He who knows this verily obtains [the realization of] all his desires [since, through his identification with Vaishvānara, all sensible objects become dependent upon him and form an integral part of his own being], and he becomes the first [in the realm of Vaishvānara or of Virāj, of which he makes himself the center by virtue of that very knowledge and by the identification it implies when once it is fully effective].

Tājasa, the seat of which is in the dream state, is [represented by] U, the second mātrā, because it is the elevation [utkarsha, of sound from its first modality, just as the subtle state is, in formal manifestation, of a more exalted order than the gross state] and also because it participates in both [ubhaya, that is to say, alike by its nature and by its position, it is intermediate between the two extreme elements of the monosyllable Om, just as the dream state is intermediate, sandhyā, between waking and deep sleep].

He who knows this in truth advances along the path of Knowledge [by his identification with Hiranyagarbha], and [being thus illumined] he is in harmony [saman, with all things, for he beholds the manifested Universe as the product of his own knowledge, which cannot be separated from him], and none of his descendants [in the sense of spiritual posterity] will be ignorant of Brahma.

Prajña, the seat of which is in the state of deep sleep, is [represented by] M, the third mātrā, because it is the measure [miti, of
the two other mātrās, as in a mathematical ratio the denominator is the measure of the numerator, as well as because it is the end [of the monosyllable Om, considered as containing the synthesis of all sounds, in the same way that the unmanifested contains, synthetically and in principle, the whole of the manifested with its diverse possible modes: the latter can indeed be considered as returning into the unmanifested, from which it was never distinguished save in a contingent and transitory manner: the first cause is at the same time the final cause and the end is necessarily identical with the principle].

2. He who knows this is in truth the measure of this whole [that is to say the aggregate of the 'three worlds' or of the different degrees of universal Existence, of which pure Being is the 'determinant'] and he becomes the final term (of all things, by concentration in his own 'Self' or personality, where all the states of manifestation of his being are rediscovered, 'transformed' into permanent possibilities).

3. Were it not to involve too lengthy a digression, it would be possible to enter into a number of interesting considerations of a linguistic nature concerning the determinate; we will merely remark that in Hebrew the divine name El is related to the expression given to Being, conceived as the 'ontological subject' and 'universal determinant' insofar as they are, and of those things which are not insofar as they are not, that is to say metaphysically, of the manifested and the unmanifested; although, strictly speaking, one cannot speak of a 'measure' of the unmanifested, if by 'measure' is meant a determination by special conditions of existence, like those defining each state of manifestation. On the other hand, it goes without saying that the Greek sophist Protagoras, who is supposed to be the author of the formula we have just quoted (transposing the sense in order to apply it to 'Universal Man'), was certainly far from having attained to this conception; for in applying it to the individual human being, he only meant to express by it what the moderns would call a radical 'relativism', whereas, for us, it implies something quite different, as will be readily understood by those who know the relationship existing between 'Universal Man' and the Divine Word (cf. particularly Saint Paul, 1 Cor. 15).

4. It is only in this state of universalization, and not in the individual state, that it can be said truly that 'man is the measure of all things, of those things which are unsofar as they are, and of those things which are not unsofar as they are not,' that is to say, metaphorically, of the manifested and the unmanifested; although, strictly speaking, one cannot speak of a 'measure' of the unmanifested, if by 'measure' is meant a determination by special conditions of existence, like those defining each state of manifestation. On the other hand, it goes without saying that the Greek sophist Protagoras, who is supposed to be the author of the formula we have just quoted (transposing the sense in order to apply it to 'Universal Man'), was certainly far from having attained to this conception; for in applying it to the individual human being, he only meant to express by it what the moderns would call a radical 'relativism', whereas, for us, it implies something quite different, as will be readily understood by those who know the relationship existing between 'Universal Man' and the Divine Word (cf. particularly Saint Paul, 1 Cor. 15).

5. Māṇḍūkya Upanishad 1.8–12. Concerning the meditation on Om and its effects in various orders, relatively to the three worlds, further indications can be found in the Prashna Upanishad v.1–7. Cf. also Chhāndogya Upanishad 1.1.4–5.
So far we have been considering the constitution of the human being, as well as its different states, on the assumption that it subsists as a compound of the various elements that go to make up its nature, that is to say during the continuance of its individual life. It is necessary to emphasize the fact that the states which properly belong to the individual as such, that is to say not only the gross or corporeal state, as is obvious, but also the subtle state (provided, of course, that only the extra-corporeal modalities of the integral human state are included in it and not the other individual states of the being), are strictly and essentially states of the living man. This does not necessarily involve admitting that the subtle state comes to an end at the precise moment of bodily death and simply as a result thereof; on the contrary, we shall see later on that a passage of the being into the subtle form takes place at that moment; but this passage is only a transitory phase in the reabsorption of the individual faculties from the manifested into the unmanifested, a phase the existence of which is quite naturally accounted for by the intermediate position occupied by the subtle state. It is, however, true that it may be necessary to envisage, in a particular sense and in certain cases at least, a prolongation and even an indefinite prolongation of the human individuality, which must needs be referred to the subtle, that is to say to the extra-corporeal modalities of that individuality; but such a prolongation is in no wise identical with the subtle state as it existed during earthly life. It must in fact be clearly understood that under the single heading of 'subtle state' we are obliged to include extremely varied and complex modalities, even though we confine our viewpoint to the realm of purely human possibilities only; it is for this reason that we have taken care from the very beginning to point out that the term 'subtle state' should always be understood relatively to the corporeal state, taken as a starting-point and term of comparison; it thereby acquires a precise meaning solely by contrast to the latter state which, for its part, appears sufficiently well defined by the fact that it is the state in which we find ourselves at the present moment. Furthermore, it will have been observed that, among the five envelopes of the 'Self', three are regarded as contributing to make up the subtle form (whereas one only corresponds to each of the other two conditioned states of Atmā, in the one case because it really is only one particular and determinate modality of the individual, and in the other case because it is an essentially unified and 'non-distinguished' state); and this is a further clear proof of the complexity of the state in which the 'Self' uses this form as its vehicle, and this complexity must always be borne in mind if one is to follow the description of the different aspects from which it can be envisaged.

We have now to turn to the question of what is commonly called the 'posthumous evolution' of the human being, that is to say to the consideration of the consequences for that being of death or—to explain more precisely what we mean by that term—of the dissolution of the compound which we have been discussing and which constitutes its actual individuality. It should be observed moreover that when this dissolution has taken place there is strictly speaking no longer any human being left, since it is essentially this compound which constitutes the individual man; the sole case where it is still possible to call the being in a certain sense human arises when, after bodily death, it remains in one of those prolongations of the individuality to which we have already alluded; in that case, although the individuality is no longer complete from the standpoint of manifestation (since the corporeal state is henceforth lacking, the possibilities corresponding to it having completed the whole cycle of their development), nevertheless certain of its psychic or subtle elements subsist without being dissociated. In all
other cases the being cannot any longer be called human since it has passed out of the state to which that term applies and into another state, either individual or otherwise; thus the being which was formerly human has ceased to be so in order to become something else, in the same way that, through birth it became human by passing from some other state into the state which we at present occupy. Besides, if birth and death are understood in their widest sense, that is to say as changes of state, it becomes at once apparent that they are modifications which correspond analogically to one another, being the beginning and the end of a cycle of individual existence; and indeed, if one were to place oneself outside the special viewpoint of a given state in order to observe the interconnection of the different states with one another, it would be seen that they constitute strictly equivalent phenomena, death to one state being at the same time birth into another. In other words, the same modification is either death or birth according to the state or cycle of existence in relation to which it is considered, since it marks the exact point common to both states or the transition from one to the other; and what is here true for different states is also true, on a different plane, for the various modalities of a given state, where those modalities are regarded as constituting, in the development of their respective possibilities, so many secondary cycles which are integrated in the totality of a more comprehensive cycle. Finally, it is particularly important to add that 'specification', according to the sense in which we have already used the expression (that is to say in the sense of attachment to a definite species such as the human species, which imposes certain general conditions upon a being, thus constituting its specific nature) is valid only within a given state and cannot be applied outside it. This must obviously be true, since the species is in no wise a transcendent principle in relation to this individual state, but pertains exclusively to the same domain, being itself subject to the limiting conditions which define that domain.

For this reason the being that has passed into a different state is no longer human, since it no longer belongs in any way to the human species. The expression 'posthumous evolution' calls for certain reservations, since it is only too liable to give rise to a number of ambiguities. In the first place, death being conceived as the dissolution of the human compound, the word 'evolution' clearly cannot be understood here in the sense of an individual development, since we are concerned on the contrary with a reabsorption of the individuality into the unmanifested state; this would amount rather to an 'involution' from the particular point of view of the individual. Indeed, etymologically these terms 'evolution' and 'involution' signify nothing more nor less than 'development' and 'envelopment'; but we are well aware that in modern language the word 'evolution' has acquired quite a different meaning, which has almost converted it into a synonym for 'progress'. We have already had ample opportunities for expressing our views upon these quite recent ideals of 'progress' and 'evolution', which, by expanding themselves beyond all measure, have had the effect of completely corrupting the present-day Western mentality; it would be pointless to repeat ourselves here. We will merely recall that 'progress' can only validly be spoken of in quite a relative sense, care always being taken to define in what respect it is used and within what limits; reduced to these proportions, it no longer retains anything in common with that.

2. It will be apparent that in the present context we are using the word 'human' only in its precise and literal sense, as applying solely to individual man; there is no question here of the analogical transposition that makes possible the conception of 'Universal Man'.

3. Moreover, it cannot be said that this entails a destruction of the individuality, because, in the unmanifested, the possibilities constituting it subsist in principle in a permanent manner, together with all the other possibilities of the being; nevertheless, since the individuality exists as such only in manifestation, it may truly be said that on re-entering into the unmanifested it really disappears or ceases to exist qua individuality: it is not annihilated (for nothing that is can cease to be), but it is 'transformed'.

4. In this sense, but only in this sense, it would be possible to apply these terms to the two phases that are distinguishable in every cycle of manifestation, as we have already explained.

1. These considerations relating to birth and death are moreover applicable to the point of view of the 'macrocosm' as well as to that of the 'microcosm'; though this is not the place to enlarge on this theme, readers may nevertheless gather some idea of how the implied consequences affect the theory of cosmic cycles.
absolute 'progress' which began to be spoken of toward the end of the eighteenth century and which our contemporaries are pleased to adorn with the name of 'evolution', an expression that has a more 'scientific' ring to their ears. Eastern thought, like ancient thought in the West, could not admit this notion of 'progress', except in the relative sense that we have just given to it, that is to say as an idea of secondary importance, quite limited in scope and devoid of any metaphysical significance, since it belongs to that category of ideas which can only be applied to possibilities of a particular order and is not transposable outside certain limits. The 'devolutionary' point of view does not admit of universalization and it is not possible to conceive of the real being as something which 'evolves' between two definite points or which 'progresses', even indefinitely, in a fixed direction; such conceptions are devoid of meaning and show complete ignorance of the most elementary metaphysical principles. At the most one might speak in a particular sense of the 'evolution' of the being, in order to convey the idea of a passage to a higher state; but even then it would be necessary to make a reservation preserving the full relativity of the term since, as concerns the being regarded in itself and in its totality, there can never be any question either of 'evolution' or of 'involution' in any sense whatever, its essential identity being in no wise altered by particular and contingent modifications of any sort, which can only affect one or another of its conditioned states.

A further reservation should be made with regard to the use of the word 'posthumous': it is only from the particular point of view of human individuality and insofar as it is conditioned by time that one can speak of what is produced 'after death' and likewise of what took place 'before birth', so long at least as it is intended to preserve for the words 'before' and 'after' the chronological meaning which they normally convey. In themselves the states in question, if they exist outside the realm of human individuality, are in no wise temporal states and consequently cannot be situated chronologically; this is true, moreover, even of those states which include among their conditions some other mode of duration, that is to say of succession, once it is no longer temporal succession that is in question. As for the unmanifested state, it goes without saying that it lies quite outside all succession, so that the notions of anteriority and posteriority, even taken in the widest possible sense, cannot be applied to it in any way whatsoever. In this respect it may be remarked that, even during its lifetime, the being loses the notion of time when its consciousness has quit the individual realm, as occurs in deep sleep and in ecstatic trance; so long as it remains in either of these states, which are truly unmanifested, time no longer exists for it.

Mention must still be made of the case where the posthumous state takes the form of a simple prolongation of the human individuality: this prolongation, it is true, may be situated in 'perpetuity', that is to say in temporal indefinitude, or in other words in a mode of succession which still belongs to time (since we are not concerned with a state subject to conditions other than our own); but the time in question no longer has anything in common with the time in which bodily existence is carried on. Furthermore, such a state is not among those which are of particular interest from the metaphysical point of view since, on the contrary, from that point of view it is the possibility of passing beyond individual conditions which must always be borne in mind rather than the possibility of remaining in them indefinitely; if we feel obliged, however, to refer to that state, it is chiefly for the sake of taking into account all possible cases and also because, as will be apparent later, this prolongation of human existence preserves for the being the possibility of obtaining 'Deliverance' without passing through other individual states. However that may be, leaving aside this last case, the following may be said: if nonhuman states are spoken of as situated 'before birth' or 'after death', this is primarily because they appear so in relation to human individuality; but it is also most important to realize that it is not the individuality which enters these states or which passes through them successively, since they are states which lie outside its sphere and which do not concern it as an individuality. Furthermore, there is a sense in which the notions of anteriority and posteriority may be applied quite independently of the point of view of succession, temporal or otherwise; we are referring to that order, at the same time logical and ontological, in which the various states are interconnected and determine one another; thus, if one state is the consequence of another, it may be said to be posterior to
it. In such a manner of speaking use is being made of the temporal symbolism which serves to express the entire theory of cycles, although, metaphysically, it must always be remembered that there is perfect simultaneity between all the states, the point of view of actual succession being applicable only within a particular given state.

The foregoing remarks have been made with a view to forestalling any tendencies to attribute to the expression 'posthumous evolution' (where it is thought advisable to use it in the absence of a more adequate term and in order to conform to certain habits of expression) an importance and a significance which it does not and could not really possess. We will now proceed to study those processes to which it relates, an understanding of which springs most immediately from all the foregoing considerations. The exposition which follows is taken from the Brahma-Sūtras and from their traditional commentary (and by that we especially have in mind the commentary of Shankarāchārya), but we must point out that it is not a literal translation; here and there we shall find it necessary to summarize the commentary and also to comment upon it in its turn, without which the summary would remain practically incomprehensible, as in fact very often happens where the interpretation of Eastern texts is concerned.

5. Adhyāya iv. 2-4. The first Pada of this fourth Adhyāya devoted to the examination of the means of attaining Divine Knowledge, the fruits of which will be set forth in the following chapters.

6. Colebrooke has given a summary of this kind in his Essays on the Philosophy of the Hindus (Essay iv); but his interpretation, though it is not distorted by a systematic prejudice such as is only too frequent among other orientalists, is extremely defective from the standpoint of metaphysics, purely and simply through a lack of metaphysical insight.

7. It may be remarked, in this connection, that in Arabic the word tarjumah means both 'translation' and 'commentary', the one being looked upon as inseparable from the other; its nearest equivalent would therefore be 'explanation' or 'interpretation'. It can even be said, where traditional texts are concerned, that a translation into a vernacular tongue, to be intelligible, should correspond exactly to a commentary written in the actual language of the text; a literal translation from an Eastern into a Western language is usually impossible, and the more one strives to keep strictly to the letter, the greater the danger of losing the spirit; this is a truth which philologists unfortunately seem incapable of grasping.

18

THE REABSORPTION OF THE INDIVIDUAL FACILITIES

When a man is about to die, speech, followed by the remainder of the ten external faculties [the five faculties of action and the five faculties of sensation, manifested outwardly by means of the corresponding organs, but not identical with those organs themselves since they separate from them at this stage] is reabsorbed into the inward sense [manas], the activity of the external organs coming to an end before that of this inward faculty [which is thus the final term of all the other individual faculties in question, just as it is their starting-point and common source]. This latter faculty thereupon withdraws in the same way into the 'vital breath' [prāna], accompanied in its turn by all the vital functions [the five vayus, which are modalities of prāna and thus return into an undifferentiated state], these functions being inseparable from life itself; furthermore this same retreat of the inward sense is also to be observed in deep sleep and in ecstatic trance [accompanied by complete cessation of every external manifestation of consciousness].

We may add, however, that this cessation does not always necessarily imply total suspension of bodily sensibility, which constitutes a kind

1. Speech is numbered the last when these faculties are considered in the order of their development; it must therefore be the first in the order of their reabsorption, since the order is now reversed.

2. Úchândogya Upanishad vi. 8. 6.
of organic consciousness, if one may describe it so; but under these circumstances the individual consciousness properly so called will play no part in the manifestations of this sensibility, being no longer in communication with it as it normally is in the ordinary states of the living being; and the reason for this is easily understood, since, in point of fact, the individual consciousness no longer exists in the cases referred to, the real consciousness of the being having been transferred into a different state, which is really a supra-individual state. This organic consciousness to which we are alluding is not a consciousness in the true sense of the word, but it participates therein in some manner, owing its origin to the individual consciousness, of which it is a kind of reflection; separated from the latter, it amounts to no more than a mere illusion of consciousness, but it can still present the appearance of consciousness to those who are only aware of externals, in the same way that, after death, the persistence of certain more or less dissociated psychic elements, when they are able to manifest themselves, are able to present a similar and no less illusory appearance, as we have already explained in a different connection.

The 'vital breath', accompanied similarly by all the other functions and faculties [already reabsorbed into it and subsisting there as possibilities only, having now reverted to the state of indifferenciation whence they had to go forth in order to manifest themselves effectively during life] retires in its turn into the 'living soul' [jīvātmā, particular manifestation of the 'Self' at the center of the human individuality, distinguishing itself from the 'Self' so long as that individuality endures as such, although this distinction is in fact purely illusory from the standpoint of absolute reality, where there is nothing different from the 'Self']: and it is this living soul which [as the reflection of the 'Self' and central principle of the individuality] governs the whole body of individual faculties [regarded in their integrity and not merely in their relationship with the bodily modality]. As a king's servants gather round him when he is about to go forth upon a journey, even so all the vital functions and faculties [external and internal] of the individual gather round the living soul [or rather within it, out of which they all issue and into which they are all reabsorbed] at the final moment [of life in the ordinary sense of the word, that is to say of manifested existence in the gross state], when this living soul is about to retire from its bodily form. Accompanied thus by all its faculties [since it contains them and preserves them in itself as possibilities], it withdraws, in an individual luminous essence [that is to say in the subtle form, which is compared to a fiery vehicle, as we saw when studying Tājasana, the second condition of Ātmā] composed of the five tannātras or supra-sensible elementary essences [just as the bodily form is composed of the five bhūtas or corporeal and sensible elements], into a subtle state [in contrast to the gross state which is that of external or corporeal manifestation and of which the cycle is now completed so far as concerns the individual in question].

Consequently [by reason of this passage into the subtle form, looked upon as luminous], the 'vital breath' is said to retire into the Light, which does not mean to say the igneous principle

3. Just as, in a surgical operation, even the most complete anaesthesia does not always prevent the external symptoms of pain.

4. The organic consciousness we have just mentioned naturally enters into what the psychologists call the 'subconscious'; but their chief error is to think that they have sufficiently explained a thing when all they have really done is to give it a name; besides, under that heading they have assembled the most heterogeneous collection of elements, without even being able to make a distinction between what is really conscious in some degree and what only appears to be so. Nor have they distinguished between the genuine 'subconscious' and the 'superconscious', in other words, between factors assignable to states that are respectively higher and lower in relation to the human state.

5. It may be noticed that prāna, although it is outwardly manifested in respiration, is in reality distinct from the latter, since it would obviously be meaningless to say that respiration, a physiological function, separates from the organism and is reabsorbed in the 'living soul'. We will remind the reader once more that prāna and its various modalities belong essentially to the subtle state.

7. A faculty is properly a power, that is to say a possibility, which is, in itself, quite independent of its actual exercise.
exclusively [since we are really concerned with an individualized reflection of the intelligible Light, that is to say a reflection the nature of which is fundamentally the same as that of the mental faculty during corporeal life, and which moreover implies a combination of the essential principles of all five elements as its support or vehicle], nor does this withdrawal necessarily imply an immediate transition, since a traveler is said to go from one city to another even though he may pass successively through one or several intermediate cities.

Furthermore, this withdrawal or this abandonment of the bodily form [as described so far] is common alike to the ignorant person [avidvān] and to the contemplative Sage [vidvān] up to the point at which their respective [and henceforth different] paths branch; and immortality [amrita, but without immediate Union with the Supreme Brahma being thereupon attained] is the fruit of simple meditation (upāsana, carried out during life without having been accompanied by any effective realization of the being's higher states), although the individual barriers resulting from ignorance [avidyā] may not yet be completely destroyed.8

An important comment is called for here as to the sense in which the immortality in question is to be understood: we have in fact pointed out elsewhere that the Sanskrit word amrita applies exclusively to a state which is beyond all change, whereas, by the corresponding word Westerners merely mean an extension of the possibilities of the human order, consisting in an indefinite prolongation of life (what the Far-Eastern tradition calls 'longevity') under conditions which are to a certain degree transposed, but which always remain more or less similar to those of terrestrial existence, since they likewise concern the human individuality. Now in the present instance the state described is still an individual state and nevertheless it is said that immortality can be obtained therein; this may appear inconsistent with what we have just remarked, since it might be supposed that relative immortality only is meant, understood according to the Western sense: actually however that is not the case. It is indeed true that in order to be fully effective immortality, in the metaphysical and Eastern sense, can only be obtained beyond all conditional states, individual and otherwise, in such a way that, being absolutely independent of any possible mode of succession, it is identical with Eternity itself; it would thus amount to an abuse of language to make this word apply to temporal 'perpetuity' or to the indefinitude of any type of duration; but it is not in that sense that the expression is to be understood here. It must be realized that the idea of death is essentially synonymous with a change of state, which, as we have already remarked, is its widest acceptance; and when it is said that the being has virtually attained immortality, that is taken to mean that it will not need to pass through further conditioned states different from the human state, or to traverse other cycles of manifestation. This is not yet 'Deliverance', actually realized, whereby immortality would be rendered effective, since the 'individual barriers', that is to say the limitative conditions to which the being is subject, are not entirely destroyed; but it implies the possibility of obtaining that 'Deliverance' directly from the human state, in the prolongation of which the being is maintained for the whole duration of the cycle to which that state belongs (which constitutes perpetuity properly so called); the being is thus enabled to take part in the final 'transformation' which will be accomplished when the cycle is completed, causing everything that is then contained within it to return to the principal state of non-manifestation.10 This is why the name 'deferred Deliverance' or

9. The Greek word αἰών really means 'perpetual' and not 'eternal', for it is derived from αἰών (the same as the Latin aevum), which means an indefinite cycle; and this was also the original meaning of the Latin saeculum (French siècle), by which it is sometimes translated.
10. Much could be said on the subject of the translation of this final transformation into theological language in the Western religions, and especially about the conception of the 'Last Judgment' which is closely bound up with it; but this would require a more complicated and lengthy explanation than can be undertaken here, all the more so since, in practice, the characteristically religious point of view stops short at the consideration of a secondary cycle, beyond which a continuation of existence in the individual human state may still have to be taken into account; this would not be possible if the cycle to which that state belonged were being considered in its integrality. This must not be taken to mean, however, that the necessary
'Deliverance by degrees' (krama-mukti) is given to this possibility, since in this manner Deliverance is only obtained by means of intermediate stages (conditioned posthumous states) and not in a direct and immediate manner, as in other cases which we shall discuss later on.\textsuperscript{11}

So long as it is in this condition [still individual, as has just been explained] the spirit [which, consequently, is still jivātmā] of that person who has practiced meditation [during his life, without attaining effective possession of the higher states of his being] remains attached to the subtle form [which may also be regarded as the formal prototype of the individuality, subtle manifestation representing an intermediate stage between the unmanifested and the gross manifestation and playing the part of immediate principle in relation to the latter]; and it is associated, in this subtle form, with the vital faculties [in the state of reabsorption or principal contraction which has already been described].

It is admittedly necessary that there should still be a form in which the being can clothe itself, from the fact that its condition still belongs to the individual order; and this can only be the subtle form, since it has left the corporeal form and since moreover the subtle form must subsist after the body, from having preceded it in the order of development in manifested mode, which is reproduced in inverse order in the return to the unmanifested; this does not however mean that this subtle form must in such a case be exactly
the same as it was during bodily life, acting as the vehicle of the human being in the dream state.\footnote{There is a certain continuity between the different states of the being, and all the more so between the various modalities which go to make up the same state of manifestation. The human individuality, even in its extra-corporeal modalities, must needs be affected by the disappearance of its bodily modality; moreover, there are psychic, mental, and other elements which have no reason for existing apart from their relation to bodily existence. Thus the disintegration of the body involves these other elements as well, for they continue to be associated with the body and are consequently also given up by the being at the moment of death, understood in the ordinary sense of the word.} We have already remarked that the individual condition itself, in an altogether general way and not merely as concerns the human state, can be defined as that condition in which the being is limited by a form; but it should be understood that this form is not necessarily determined as spatial and temporal, as is the case in the particular instance of the bodily state; it can in no wise be so in the non-human states, which are subject not to space and time, but to quite different conditions. As to the subtle form, if it does not altogether escape from time (although such time is not the same as that in which bodily existence is carried on) at least it escapes from space, and that is why one must on no account attempt to picture it as a kind of 'double' of the body;\footnote{Even the psychologists themselves recognize that the 'mental faculty', or individual thought, the only kind they are able to understand, exists outside the spatial condition; it requires all the ignorance of a 'neo-spiritualist' to wish to 'localize' the extra-corporeal modalities of the individual and to suppose that the posthumous states are situated somewhere in space.} neither must it be looked upon as a 'mould' for the body just because it is declared to be the formal prototype of the individuality at the origin of its manifestation;\footnote{It is this subtle prototype and not the bodily embryo which in Sanskrit is referred to by the word pinda, as we mentioned before; this prototype moreover pre-exists individual birth, for it is contained in Hiranyagarbha from the beginning of the manifestation of the cycle, as representing one of the possibilities to be developed during the course of that manifestation; but its pre-existence is then only virtual, in the sense that it is not yet a state of the being of which it is destined to be the subtle form, since that being is not actually in the corresponding state, not yet existing, that is to say, as a human individual; and the same consideration applies by analogy to the bodily germ, if one regards it as also pre-existing in a certain sense in the ancestors of the individual in question, ever since the origin of mankind on this earth.} we know only too well the Westerner's tendency to resort to the grossest representations and how many serious errors can arise in this way, so that we feel it imperative to offer every possible warning.

1. There is a certain continuity between the different states of the being, and all the more so between the various modalities which go to make up the same state of manifestation. The human individuality, even in its extra-corporeal modalities, must needs be affected by the disappearance of its bodily modality; moreover, there are psychic, mental, and other elements which have no reason for existing apart from their relation to bodily existence. Thus the disintegration of the body involves these other elements as well, for they continue to be associated with the body and are consequently also given up by the being at the moment of death, understood in the ordinary sense of the word.

2. Even the psychologists themselves recognize that the 'mental faculty', or individual thought, the only kind they are able to understand, exists outside the spatial condition; it requires all the ignorance of a 'neo-spiritualist' to wish to 'localize' the extra-corporeal modalities of the individual and to suppose that the posthumous states are situated somewhere in space.

3. It is this subtle prototype and not the bodily embryo which in Sanskrit is referred to by the word pinda, as we mentioned before; this prototype moreover pre-exists individual birth, for it is contained in Hiranyagarbha from the beginning of the manifestation of the cycle, as representing one of the possibilities to be developed during the course of that manifestation; but its pre-existence is then only virtual, in the sense that it is not yet a state of the being of which it is destined to become the subtle form, since that being is not actually in the corresponding state, not yet existing, that is to say, as a human individual; and the same consideration applies by analogy to the bodily germ, if one regards it as also pre-existing in a certain sense in the ancestors of the individual in question, ever since the origin of mankind on this earth.

4. Universal manifestation viewed as a whole is often referred to in Sanskrit by the term samsāra; as we have explained before, it includes an indefinite series of cycles, that is to say of states or degrees of existence, each of which terminates in a pralaya, like the cycle that more particularly concerns us here and really constitutes but one moment of the samsāra. Moreover, we will repeat once again, to avoid any possible misunderstanding, that the interconnection of these cycles is really of a causal and not a successive order; in this respect, all expressions drawn by analogy from the temporal order must be treated as purely symbolical.
cycle) with that of the being who, instead of remaining until the
pralaya in the prolongations of the human state, has passed after
bodily death into another individual state. Besides this case, there is
also the case where the realization of higher states and even of the
'Supreme Identity', not having been obtained during life in the
body, is achieved in the posthumous prolongations of the individu-
ality; from being virtual, immortality then becomes effective,
although this may not come about until the very end of the cycle:
this is the 'deferred Deliverance' of which we have already spoken.
In both cases the being, which must be regarded as jīvātmā attached
to the subtle form, finds itself for the whole duration of the cycle
'incorporated' so to speak in Hiranyagarbha, which is considered
as jīva-ghāṇa, as we have already explained; it remains, therefore,
subject to that special condition of existence which is life (jīva), by
which the true sphere of Hiranyagarbha is delimited in the hierar-
chical order of Existence.

This subtle form [in which the being, which thus remains in the
human individual state, resides after death] is, [in comparison
with the bodily or gross form] imperceptible to the senses both
as to its dimensions [that is to say because it is outside the spatial
condition] and as to its consistency [or its particular substance,
which is not made up of a combination of corporeal elements];
consequently, it does not affect the perception [or the external
faculties] of those who are present when it separates from the
body [after the 'living soul' has withdrawn into it]. Neither is it
affected by combustion or any other treatment which the body
may undergo after death [which is the result of this separation,
from the very fact of which no action of a sensible order can have
any further repercussion on this subtle form, nor upon the
individual consciousness which, remaining attached thereto, is no
longer connected with the body]. It is only sensible through its
animating heat [its specific quality insofar as it is assimilated to
the igneous principle] so long as it inhabits the gross form,
which becomes cold (and as a result inert as an organic whole) in
death, as soon as it [the subtle form] has left it [although the
other sensible qualities of the corporeal form still subsist without
any apparent change], and which was warmed (and quickened)
by it so long as it dwelt there [since it is precisely in the subtle
form that the principle of individual life resides, so that it is only
through the communication of its properties that the body can
also be described as alive, by reason of the tie which exists
between these two forms insofar as they are the expression of
states of the same being, that is to say precisely up to the moment
of death].

But he who has obtained [before death, always understood as
separation from the body] true knowledge of Brahma [implying
effective possession of all the states of the being through meta-
physical realization, apart from which there can only be an
imperfect and purely symbolical knowledge] does not pass [in
successive mode through all the same stages of withdrawal [or
of reabsorption of the individuality from the state of gross mani-
festation to the state of subtle manifestation, with the different
modalities which this implies, and then to the unmanifested
state, where individual conditions are at length entirely sup-
pressed]. He proceeds directly [into this latter state, and even
beyond it, if it is only regarded as the principle of manifestation]
into Union [already realized, at least virtually, during life in the
body] with the Supreme Brahma, with which he is identified
(in an immediate manner), just as a river [here representing the

5. This word, which we have used here to illustrate our meaning by means of
the picture that it calls up, must not be taken literally, since the state in question has
nothing corporeal about it.

6. As we have explained before, this animating warmth, represented as an
inward fire, is sometimes identified with Vaiśhāvānara, considered in this case no
longer as the first of the conditions of Ātmā, as previously described, but as the
'Regent of Fire,' as we shall see presently; Vaiśhāvānara is then one of the names of
Agni, and designates one of his functions and particular aspects.

7. If 'Union' or the 'Supreme Identity' has only been realized virtually, 'Deliver-
ance' takes place immediately at the very moment of death; but this 'Deliverance'
can also take place during life itself if 'Union' has already been realized fully and
effectively; the difference between these two cases will be discussed in greater detail
further on.
current of existence through all states and all manifestations], at
its mouth [which is the end or final term of that current]
becomes identified [by intimate penetration] with the waves of
the sea [samudra, the gathering together of the waters, symboliz-
ing the totalization of possibilities in the Supreme Principle]. His
vital faculties and the elements of which his body is composed
[all considered in principle and in their suprasensible essence],
the sixteen component parts [shodasha-kalāḥ] of the human
form [that is to say the five tattvāras, manas and the ten facul-
ties of sensation and action], pass completely into the unman-
ifested state [avyakta, where, by transposition, they are all to be
found in permanent mode, as changeless possibilities], this pas-
sage moreover implying no change for the being itself [of the
kind implied in the intermediate stages, which necessarily
include a variety of modifications, since they still belong to
‘becoming’]. Name and form (nāmarūpa, namely the determi-
nation of the individual manifestation in its essence and its sub-
stance, as has been previously explained) also come to an end [as
limiting conditions of the being] and, being ‘undivided’, without
the parts or members, therefore, which composed the earthly
form [in the manifested state and insofar as that form was sub-
ject to quantity in its various modes], he is set free from the
conditions of individual existence [as well as from all other con-
ditions applying to a special and determined state of existence of
any sort, even a supra-individual state, since the being is hence-
forth in the absolutely unconditioned principial state].

8. It may even happen, in exceptional cases, that the transposition of these ele-
ments is effected in such a way that the bodily form itself disappears without leav-
ing any perceptible trace. Instead of being left behind by the being in the normal
way, it passes over in its entirety either into the subtle or into the unmanifested
state, so that properly speaking there is no death; in this connection, we have else-
where recalled the biblical examples of Enoch, Moses, and Elijah.

9. The principal modes of quantity are expressly named in the following bibli-
cal formula: ‘But thou hast arranged all things by measure and number and weight,’
(Wisd. of Sol. 11:26): the Mene, Tekel, u-Pharsin (counted, weighed, divided) of
Belshazzar’s vision (Dan. 5:25–28) corresponds word for word to this order (except
that the first two terms are inverted).

10. Prashna Upanishad vi.5; Mundaka Upanishad iii.2.8; Brahma-Sūtras
iv. 2.8–16.

Several commentators of the Brahma-Sūtras, in order to bring out
the nature of this ‘transformation’ more vividly [we take the word in
its strictly etymological sense, signifying ‘passage outside form’],
compare it to the disappearance of water sprinkled upon a burning-
hot stone. This water is in fact ‘transformed’ on contact with the
stone, at least in the relative sense that it has lost its visible form
(though not all form, since it clearly continues to belong to the cor-
poreal order), without however its being possible to say on that
account that it has been absorbed by the stone, since, actually, it has
evaporated into the atmosphere, where it remains in a state imper-
ceptible to sight. Similarly, the being is in no wise ‘absorbed’ on
obtaining ‘Deliverance’, although it may seem so from the point of
view of manifestation, whence the ‘transformation’ appears as a
‘destruction’; viewed from the standpoint of absolute reality,
which alone remains for it, the being is on the contrary dilated
beyond all limit, if one may use such an expression (which exactly
translates the symbolism of steam from water spreading itself indef-
initely through the atmosphere), since it has effectively realized the
fullness of its possibilities.

11. Commentary of Ranganātha on the Brahma-Sūtras.
12. That is why Śiva, according to the commonest interpretation, is looked
upon as the ‘destroyer’, whereas in reality he is the ‘transformer’.
20

THE CORONAL ARTERY AND THE 'SOLAR RAY'

We must now return to the examination of what happens to the being who, not being 'delivered' at the precise moment of death, has to pass through a series of degrees, represented symbolically as the stages of a journey and forming so many intermediate but not conclusive states which it is necessary to traverse before reaching the final goal. It should be remarked, moreover, that all these states, being still relative and conditioned, have no common measure with that state which alone is absolute and unconditioned; therefore, no matter how exalted certain of them may be when compared with the bodily state, it would still seem that by obtaining them the being is no nearer to its final objective, which is 'Deliverance'; and the whole of manifestation being strictly nil in comparison with the Infinite, it is evident that the differences between the states which go to make up manifestation must likewise be nil in its presence, however considerable they may be in themselves; this holds good so long as the various conditioned states, which those differences separate one from another, are alone taken into account. However, it is nonetheless true that the passage to certain higher states constitutes as it were an advance toward 'Deliverance'; but in that case it is gradual (krama-mukti), and may be compared to the use of certain appropriate means, such as those of Hatha-Yoga, which are effective as a preparation, although there is certainly no possible comparison between these contingent means and the 'Union' which it is intended to realize by using them as 'supports'.

1. An analogy might be drawn between what we have said here and what could be said in like manner from the point of view of Catholic theology concerning the sacraments: in the latter also, the outward forms are properly speaking 'supports', and these eminently contingent means produce a result which is of quite a different order from their own. It is by reason of his very nature and of the conditions governing it that the human individual requires such 'supports' as a starting-point for a realization that extends far beyond them; and the disproportion between the means and the end corresponds to no more than the disproportion that exists between the individual state, taken as the basis for that realization, and the unconditioned state that is its term.

We cannot develop here a general theory concerning the efficacy of rites; we will confine ourselves to saying, by way of indicating the essential principle, that everything that is contingent insofar as it is a manifestation (except if it be a question of purely negative determinations) ceases to be so when viewed as a permanent and immutable possibility; everything that enjoys a positive existence must therefore be rediscovered in the Unmanifest, and it is this which allows of a transposition of the individual into the Universal, by the suppression of the limiting (therefore negative) conditions which are inherent to all manifestation.
Besides this nādi, which occupies a central position, there are two others which play a particularly important part (notably as regards the correspondence in the subtle order with respiration, and consequently in the practices of Hatha-Yoga): the one, situated on its right, is called pingalā: the other, on its left, is called idā. It is said furthermore that pingalā corresponds to the sun and idā to the moon; now we have seen above that the sun and the moon are described as the two eyes of Vaishvānara; these then are related respectively to the two nādis in question, while sushumnā, being in the center, is related to the 'third eye', that is to say to the frontal eye of Shiva;7 but we can only point out these connections in passing, since they lie outside our present subject.

By this passage [sushumnā and the crown of the head where it finishes], as a result of knowledge acquired and of consciousness of the meditated path [consciousness belonging essentially to an extra-temporal order, since, even when viewed in the human state, it is a reflection of higher states],8 the soul of the Sage,
endowed [by virtue of the psychical regeneration which has made of him a man twice born, dvija] with the spiritual Grace [Prasāda] of Brahma, which resides in this vital center [relatively to the human individual concerned], escapes [frees itself of every link with the bodily condition which may still exist] and enters a solar ray [that is to say, symbolically, an emanation from the spiritual Sun, which is Brahma Itself, this time considered universally: this solar ray is nothing else than a particularization, relatively to the being in question, or, if it be preferred, a ‘polarization’ of the supra-individual principle Buddha or Mahat, by which the multiple manifested states of the being are linked to one another and placed in communication with Ātmā, the transcendent Personality, which is identical with the spiritual Sun itself]; it is along this route [described as the path of the ‘solar ray’], that it travels by night or by day, in winter or in summer. The contact of a ray of the [spiritual] Sun with the sushumnā is constant, so long as the body lasts [as a living organism and vehicle of the manifested being]: the rays of the [intelligible] Light, elements we mentioned above, which are dissociated as a direct consequence of bodily death.

9. The conception of a ‘second birth’, as we have already pointed out elsewhere, is one of those which are common to all traditional doctrines; in Christianity, in particular, psychic regeneration is very clearly represented by baptism. Cf. this passage from the Gospel: ‘. . . unless one is born anew, he cannot see the kingdom of God. . . . Truly, truly, I say unto you, unless one is born of water and the Spirit, he cannot enter into the kingdom of God. . . . Do not marvel that I said to you, “You must be born anew.”’ (John 3:3–7). Water is looked upon by many traditions as the external formality but effectively when it is conferred in a genuine manner on one duly qualified to receive it.

10. Chhāndogya Upanishad viii. 6. 5.

11. This, apart from any other consideration, should be sufficient to show that there is no question here of a ray of the sun in the physical sense (for in that case uninterrupted contact would obviously be impossible) and that the reference can only be to the sun in a symbolical sense. The ray which is connected with the corona artery is also called sushumnā.

12. Chhāndogya Upanishad viii. 6. 2.

13. The word ‘incantation’ as used here must be understood as referring essentially to an aspiration of the being toward the Universal with the object of obtaining an inward illumination, whatever may be the outward means, such as gestures (mudrās), words or musical sounds (mantras), symbolic figures (yantras) and so on, that can be employed as accessory supports of the inward act, and which have as their effect the production of rhythmic vibrations causing a repercussion throughout the indefinite series of states of the being. Such ‘incantation’ has nothing whatever to do with the magical practices to which the same name is sometimes attached in the West, nor with a religious act such as prayer; all the methods in question are related exclusively to the realm of metaphysical realization.

14. We say ‘virtually’ because if this perfection were effective, ‘Deliverance’ would by that very fact already have been obtained. Knowledge can be theoretically emitted from this Sun, reach this [subtle] artery, and, reciprocally [in reflected mode], extend from the artery to the Sun [as an indefinite prolongation by means of which communication, either virtual or effective, is established between the individuality and the Universal].

Everything that has just been said is completely independent of temporal circumstances and of all other similar contingencies which accompany death; that is not to say, however, that these circumstances are always devoid of any influence upon the posthumous condition of the being, but they have only to be considered in certain cases, which moreover we can but indicate here without further development.

The preference for summer, as an example of which the case of Bhishma is cited, who waited for the return of this favorable season for his death, does not concern the Sage who, in the contemplation of Brahma, has accomplished the rites [relative to ‘incantation’] as prescribed by the Veda, and who has consequently acquired [at least virtually] the perfection of Divine Knowledge; but it concerns those who have followed the observances taught by the Śāṅkhya or the Yoga-Shāstra in accordance
with which the time of day and the season of the year are not matters of indifference, but have [for the liberation of the being leaving the bodily state after a preparation carried out in conformity, with the methods referred to] an effective action as elements inherent to the rite [in which they intervene as conditions upon which the effects to be obtained depend].

It goes without saying that, in the latter case, the restriction referred to only applies to beings that have stopped short at the attainment of degrees of realization corresponding to extensions of the human individuality; for one that has effectively transcended the limits of individuality, the nature of the means employed at the starting-point of realization could have no influence of any kind on its subsequent condition.

It is perfect, even though the corresponding realization has as yet only been partially accomplished.

moon, the half year when the sun descends toward the south, it is under these shadowy signs that there pass to the Sphere of the Moon [literally, 'attain the lunar light'] those who later will return [to fresh states of manifestation]. These are the two permanent Paths of the manifested world (jagat), the one bright, the other dim; by the one they go to return no more [from the unmanifested to the manifested]; by the other they go to return again [into manifestation].

The same symbolism is expounded in greater detail in various passages of the Veda. To deal first with the pitri-yāna, we will confine ourselves to remarking that it does not lead beyond the Sphere of the Moon; it follows that on that path the being is not set free from form, that is to say from the individual condition understood in its most general sense, since, as we have already remarked, it is precisely form which defines individuality as such. According to certain parallels which we have pointed out before, this Sphere of the Moon represents the 'cosmic memory'; it is on this account that it is the appointed abode of the Pitris, that is to say of the beings belonging to the preceding cycle, who are regarded as the generators of the actual cycle, owing to that causal sequence of which the succession of cycles is but the symbol; this is the origin of the term pitri-yāna, while deva-yāna naturally indicates the Path leading to the higher states of the being, toward assimilation therefore with the very essence of the intelligible Light. It is in the Sphere of the Moon that forms which have completed the full course of their development are dissolved; and it is there also that are preserved the germs of forms as yet undeveloped, since in the case of form as of everything else, the starting-point and the finishing-point are necessarily to be found in the same order of existence. For a further development of this subject it would be necessary to deal explicitly with the theory of cycles; here, however, it is sufficient to recall that each cycle being in reality a state of existence, the old form left off by a being not yet set free from individuality and the new form which it puts on necessarily belong to two different states (the passage from the one to the other taking place in the Sphere of the Moon, where the point common to both cycles is situated), since no being of any kind can pass through the same state twice, as we have explained elsewhere when pointing out the inutility of the 'reincarnationism' theories invented by certain modern Westerners.

We shall dwell at rather greater length upon the deva-yāna, which is concerned with the effective identification of the center of the individuality, where all the faculties have previously been reabsorbed into the 'living soul' (jīvātmā), with the very center of the entire being, dwelling place of the Universal Brahma. We must again point out that the process in question only applies therefore in the case where that identification has not been realized during earthly life nor at the moment of death: once it has been achieved, there is in fact no longer any 'living soul' distinct from the 'Self', since the being is from that moment quit of the individual condition; that distinction, which never existed save in illusory mode (the illusion being inherent to the condition itself), ceases for the being from the moment it attains absolute reality; the individuality disappears together with all limiting and contingent determinations, and the personality alone remains in its fullness, containing all its possibilities in their permanent, unmanifested state, principally within itself.

2. On the pitri-yāna, see Chhāndogya Upanishad v.10.3-7; Brhadāraṇyaka Upanishad VI.1.2.16.
3. It is for this reason that it is sometimes said symbolically, even in the West, that everything that has been lost on this earth is recovered there (cf. Ariosto, Orlando Furioso).
4. All that we have just said can also be related to the symbolism of Janus; the Sphere of the Moon determines the separation of the higher (non-individual) states from the lower (individual) states; hence the double part played by the Moon as Janua Coeli (cf. the litanies of the Virgin in the Catholic liturgy) and Janua Inferni, a distinction corresponding to that between the deva-yāna and the pitri-yāna. Janus or Diana is none other than the female form of Janus; and furthermore, yāna is derived from the same verbal root i, 'to go' (Latin ire), which certain writers, Cicero in particular, also consider to contain the root of the name Janus itself.
5. It must be clearly borne in mind that this reference is to the integral individuality, and not to individuality reduced to its corporeal modality alone; moreover, the latter no longer exists for the being in question, since it is the posthumous states that are under consideration here.
According to the Vedic symbolism, as found in various texts of the Upanishads, the being which follows the deva-yāna, after having left the Earth (Bhu, that is to say the corporeal world or the sphere of gross manifestation), is first conducted to the light (archis), by which is meant here the Realm of Fire (Tejas), the Ruler of which is Agni, also called Vaishvanara in a special signification of that name. It must be carefully noticed, moreover, that when we meet with the names of elements in the enumeration of these successive stages, this can only be in a symbolical sense, since all the bhūtas properly belong to the corporeal world, which is here represented in its entirety by the Earth (which, as element, is Prithvi); in reality, then, the reference is to different modalities of the 'subtle state'. From the Realm of Fire the being is led to the different kingdoms of the rulers (devatās, 'deities') or distributors of the day, of the bright half of the lunation (waxing period or first half of the lunar month), of the six months when the sun is climbing northwards and finally of the year, all of which is to be taken as referring to the correspondences of these divisions of time (the 'moments' spoken of in the Bhagavad-Gītā) analogically transposed into the extra-corporeal prolongations of the human state, and not as referring to these divisions themselves, which are literally applicable to the corporeal state only. Hence it passes to the Realm of Air (Vāyu), the Ruler of which (called by the same name) directs it toward the Sphere of the Sun (Śūrya or Āditya), and emerges from the upper limit of his kingdom through a passage likened to the nave of a chariot wheel, that is to say to a fixed axis around which the rotation or mutation of all contingent things takes place (it should not be forgotten that Vāyu is essentially the 'moving' principle), a mutation from which the being will henceforth escape. It passes next into the Sphere of the Moon (Chandra or Soma), where however it does not remain like those following the pītri-yāna, but whence it mounts to the region of the lightning (vidyut), above which is the Realm of Water (Ap), the Ruler of which is Varuna (as, analogically, the lightning flashes beneath the rain-clouds). The reference here is to the higher or celestial Waters, representing the totality of formless possibilities, as opposed to the lower Waters, which represent the totality of formal possibilities; there can be no further concern with the latter when once the being has transcended the Sphere of the Moon, since, as we remarked above, that is the cosmic region where no longer any dissolution or disintegration possible for the being which has attained to those states.

According to the language of the Greek philosophers, we might say that it will have escaped from 'generation' (pantovs) and 'corruption' (phos), terms that are synonymous with 'birth' and 'death' when these words are made to apply to all the states of individual manifestation; and from what has been said concerning the Sphere of the Moon and its significance, one can also understand what those philosophers, and Aristotle in particular, meant when they taught that the sublunary world alone is subject to 'generation' and 'corruption'; this sublunary world, in fact, really represents the current of forms of the Far-Eastern tradition; as for the Heavens, representing the formless states, they are necessarily incorruptible, that is to say there is no longer any dissolution or disintegration possible for the being which has attained to those states.

To use the language of the Greek philosophers, we might say that it will have escaped from 'generation' (pantovs) and 'corruption' (phos), terms that are synonymous with 'birth' and 'death' when these words are made to apply to all the states of individual manifestation; and from what has been said concerning the Sphere of the Moon and its significance, one can also understand what those philosophers, and Aristotle in particular, meant when they taught that the sublunary world alone is subject to 'generation' and 'corruption'; this sublunary world, in fact, really represents the current of forms of the Far-Eastern tradition; as for the Heavens, representing the formless states, they are necessarily incorruptible, that is to say there is no longer any dissolution or disintegration possible for the being which has attained to those states.

10. This word vidyut also comes from the root vid, by reason of the connection between light and sight; in its form it is very close to vidyā: the flash of lightning illumines the darkness; the latter is the symbol of ignorance (avidyā) while knowledge is an inner 'illumination'.

11. It may be noted, in passing, that this name is plainly the same as the Greek Osșovač, although some philologists, for no very obvious reasons, have cast doubt on this identity; Heaven, called Osșovač, is indeed clearly the same thing as the 'Upper Waters' spoken of in Genesis, which we meet with again here in the Hindu symbolism.

12. The Apsārās are the celestial Nymphs, which also symbolize these formless possibilities; they correspond to the Ḩarīs of the Muslim paradise; and this paradise (Ridvān) is the proper equivalent of the Hindu Svarga.

6. Chhāndogya Upanishad iv.15.5-6, also v.10.1-2; Kaushitakī Upanishad 1.3; Brhadāraṇyaka Upanishad v.10.1 and v1.2.15.

7. This waxing period of lunation is called pūrva-paksha, 'the first part', and the waning period is called uttara-paksha, 'the last part', of the month. These expressions pūrva-paksha and uttara-paksha are also used in another connection with a totally different meaning: in an argument they refer respectively to an objection and to its refutation.

8. It would be interesting to establish the concordance of this symbolical description with similar descriptions given by other traditional doctrines (cf. for example the Book of the Dead of the ancient Egyptians and the Pistis Sophia of the Alexandrian Gnostics, as well as the Tibetan Bardo-Thödol); but this would take us too far afield. In the Hindu tradition, Ganesha, representing Knowledge, is at the same time known as the 'Lord of deities'; his symbolism, in its relationship with the temporal divisions we have just been discussing, would give rise to developments of the greatest interest and also to most instructive comparisons with some ancient Western traditions; all these questions, which can find no place here, can perhaps be taken up again on another occasion.
the germs of the whole of formal manifestation are elaborated. Lastly, the remainder of the journey is carried out through the intermediate luminous region Antariksha, which has been mentioned already, though with a somewhat different application, in the description of the seven members of Vaishvanara,13 which is the Realm of Indra14 occupied by Ether (Ākāsha, here representing the primordial state of undifferentiated equilibrium), up to the spiritual Center where Prajāpati, 'Lord of produced beings', resides, who, as has already been pointed out, is the principal manifestation and direct expression of Brahma Itself in relation to the whole cycle or degree of existence to which the human state belongs. It is still necessary to take this state into account, although in principle only, since it is the one from which the being sets forth; for even though it has been set free from form and individuality, it still retains certain ties with that state so long as it has not attained the absolutely unconditioned state, that is to say so long as 'Deliverance' is not fully actualized for it.

In the various texts where the 'divine journey' is described, certain variations are to be met with affecting the number and the order of enumeration of the intermediate stations, but they are of slight importance and more apparent than real; the foregoing account, however, is the result of a general comparison of these texts and can thus be regarded as a faithful expression of the traditional doctrine upon this question.15 Besides, it is not our intention to embark upon a more detailed explanation of all this symbolism which will be, on the whole, clear enough as it stands to anyone who has some little familiarity with Eastern conceptions (we might even say with traditional conceptions in general) and their usual modes of expression; moreover, its interpretation will be facilitated by all the illustrations we have already given, among which a considerable number of those analogical transpositions will have been met with, such as form the basis of all symbolism.16 There is one point however which must be emphasized once again, even at the risk of repetition, because it is absolutely essential for the understanding of these matters. It must be clearly understood that when mention is made, for example, of the Spheres of the Sun and of the Moon, it is never the sun and the moon as visible bodies, belonging purely to the corporeal realm, that are referred to, but rather the universal principles which these bodies represent after their own fashion in the sensible world, including in certain cases the manifestations of these principles in different orders, in virtue of the analogical correspondences which interconnect all the states of the being.17 Indeed, the different Worlds (Lokas), planetary Spheres, and elementary Realms which are symbolically described as so many regions (only symbolically however, since the being that journeys through them is no longer subject to space), are in reality but

13. In that context we said that it is the medium in which forms are elaborated, because, in the scheme of the 'three worlds', this region corresponds to the realm of subtle manifestation, stretching from Earth to the Heavens; here, on the contrary, the intermediate region in question is situated beyond the Sphere of the Moon, therefore in the formless, and it is identified with Svarga, if one now understands by that word not the Heavens or higher states as a whole, but only their less elevated portion. It will again be noticed, in this connection, how a knowledge of certain hierarchical relationships makes it possible to apply one and the same symbolism at different levels.

14. Indra, whose name means 'powerful', is also known as the Regent of Svarga, as can be explained by the identification indicated in the foregoing note; this Svarga is a higher state, but not a final one, and although formless, is still conditioned.

15. For this description of the various phases of the deva-yāna, see Brahma-Sūtras iv.3.1–6.

16. We will take this opportunity to apologize for having so multiplied the footnotes and for having allowed them to occupy more space than is usual; in dealing with interpretations of the kind here referred to, and also when establishing concordances with other doctrines, this method proved necessary in order to avoid breaking the thread of our exposition by too many digressions.

17. Natural phenomena in general, and especially astronomical phenomena, are never looked upon by the traditional doctrines otherwise than as a simple means of expression, whereby they symbolize certain truths of a higher order; and if they do in fact symbolize such truths, it is because their laws are fundamentally nothing but the expression of these very truths in a particular domain, a sort of translation of the corresponding principles, naturally adapted to the special conditions of the corporeal and human state. It can therefore be seen how great is the error of those who imagine they have discovered 'naturalism' in these doctrines, or who believe that the doctrines in question are only intended to describe and explain phenomena just as a 'profane' science might do, though in a different form; this is really to reverse the true relationship, by taking the symbol itself for what it represents, the sign for the thing or the idea signified.
different states. This spatial symbolism (like the temporal symbolism which so often serves to express the theory of cycles) is natural enough and in sufficiently general use as to be unlikely to confuse any save those who are incapable of understanding anything but the most grossly literal meaning; such people will never realize the workings of a symbol, because their conceptions are irremediably limited to existence on this earth and to the corporeal world, within which, by the most naive of illusions, they wish to imprison the whole of reality.

The effective possession of these states can be obtained through identification with the principles which are described as their respective Rulers, and this identification operates in every case through knowledge, on condition that such knowledge is not merely theoretical; theory should only be looked upon as a preparation, which is however indispensable, for the corresponding realization. But, as regards each of these principles taken in itself and separately, the results of that identification do not extend beyond its particular domain, so that the obtaining of such states, which are still conditioned states, only constitutes a preliminary stage, a kind of approach (in the sense that we have already explained and with the restrictions which should be applied to such a manner of speaking) toward the ‘Supreme Identity’, the ultimate goal attainable by the being in its complete and total universalization; moreover, the realization of this identity, for those who have first of all to pass by the deva-yāna, may be deferred until the pralaya, as already stated, the transition from each stage to the next only becoming possible for the being who has obtained the corresponding degree of effective knowledge.

Thus, in the present case, which is that of krama-mukti, the being may remain in the cosmic order until the pralaya without having attained effective possession of the transcendent states in which true metaphysical realization properly consists; but thenceforth, and from the very fact that it has passed beyond the Sphere of the Moon (that is to say emerged from the ‘current of forms’), it will nonetheless have obtained that ‘virtual immortality’, which we defined previously. It is for this reason that the spiritual Center referred to above is still only the center of a particular state or of a certain degree of existence, that to which the being as a human being belonged and continues to belong in a certain manner, because its total universalization in supra-individual mode is not actually accomplished; and this is also the reason for saying that in such a condition the bonds of individuality are not yet completely sundered. It is at this point precisely that conceptions which may properly be called religious stop short: as these conceptions always refer to extensions of the human individuality, the states to which they give access must necessarily preserve some connection with the manifested world, even when they reach beyond it; they are therefore not the same as those transcendent states to which there is no other means of access except pure metaphysical knowledge. This remark is especially applicable to the ‘mystical states’; and, as regards the posthumous states, there is precisely the same difference between ‘immortality’ or ‘salvation’, understood in the religious sense (the only sense normally taken into account in the West), and ‘Deliverance’, as there is between mystical realization and metaphysical realization accomplished during earthly life. In the strictest sense, therefore, one can only speak here of ‘virtual immortality’ and, as its final term, ‘reintegration in passive mode’. Actually, this last expression lies outside the religious viewpoint, as commonly understood, and yet it is through it alone that the relative sense in which religion uses the word ‘immortality’ is justified and that a kind of link or transition can be established between it and the exclusively, whereas the Kshatriyas have for preference pursued the study of the states corresponding to the various stages of the deva-yāna as well as of the pitri-yāna.
absolute and metaphysical sense in which the same term is understood by Easterners. All this, moreover, does not prevent us from admitting that religious conceptions are capable of a transposition by means of which they receive a higher and deeper meaning, for the reason that this meaning is also present in the sacred scriptures upon which they are based; but by such a transposition they lose their specifically religious character, because this character is bound up with certain limitations, outside of which one has entered the purely metaphysical order. On the other hand, a traditional doctrine such as the Hindu doctrine, which does not place itself at the point of view of the Western religions, does nonetheless recognize the existence of the states which are more particularly envisaged by those religions, and it must needs be so, seeing that these states effectively constitute possibilities of the being; but such a doctrine cannot attribute to them an importance equal to that assigned to them by those doctrines which go no further (the perspective, if one may so put it, altering with the point of view), for going, as it does, beyond them, it is able to situate them in their exact place in the total hierarchy.

Thus, when it is said that the final goal of the ‘divine journey’ is the World of Brahma (Brahma-Loka), it is not the Supreme Brahma which is intended, not immediately at all events, but only its determination as Brahmā, who is Brahma ‘qualified’ (saguna) and, as such, considered as the 'effect of the productive Will (Shakti) of the Supreme Principle’ (Kārya-Brahma). When Brahmā is mentioned in this case He must be regarded in the first place as identical with Hiranyagarbha, principle of subtle manifestation and thus of the whole domain of human existence in its integrality; and we have in fact previously remarked that the being which has attained ‘virtual immortality’ finds itself so to speak ‘incorporated’ by assimilation into Hiranyagarbha; and this state, in which it may remain until the end of the cycle (Brahmā existing as Hiranyagarbha for that cycle only), is what is most usually meant by the Brahma-Loka. However, just as the center of each state of a being contains the possibility of identification with the center of the total being, so the cosmic center where Hiranyagarbha dwells is identified virtually with the center of all the worlds; that is to say that for the being that has passed beyond a certain degree of knowledge Hiranyagarbha appears as identical with a higher aspect of the ‘Non-Supreme’ which is Ishvara or Universal Being, first principle of the whole of manifestation. At this stage, the being is no longer in the subtle state, not even in the purely principial sense, but is in the unmanifested; it retains a certain connection however with the order of universal manifestation, of which Ishvara is properly the principle; but it is no longer attached by any special links to the human state and to the particular cycle of which that state forms a part. This stage corresponds to the condition of Prajīna, and it is the being who does not proceed beyond this condition that is described as united with Brahma, even at the time of the pralaya, in the manner of deep sleep only; the return thence to another cycle of manifestation is still possible; but, since the being is set free from individuality (as distinct

20. The word kārya, ‘effect’, is derived from the verbal root kri, ‘to make’, with the addition of the suffix ya to mark an accomplishment in the future: ‘that which is to be made’ (or to be still more exact, ‘that which is going to be made’, since ya is a modification of the root i, ‘to go’; this term therefore implies a certain notion of ‘becoming’, which necessarily presupposes that whatever it applies to is only to be considered in reference to manifestation. Concerning the root kri we will point out that it is identical with that of the Latin creare, which proves that the latter word, in its original sense, simply meant ‘making’; the idea of creation as understood nowadays is of Jewish origin, and only attached itself to the word when the Latin language came to be employed for the expression of Judeo-Christian conceptions.

21. It is this which is the nearest equivalent of the ‘Heaven’ or ‘Paradise’ of the Western religions (in which, in this case, we may also include Islam); when a number of Heavens are considered (which are often represented by planetary correspondences), they should be understood as meaning all the states superior to the Sphere of the Moon (which is itself sometimes looked on as the ‘first Heaven’, under its aspect of Janua Coeli), up to and including the Brahma-Loka.

22. Here again we are applying the fundamental analogy between the ‘microcosm’ and the ‘macrocosm’.

23. This identification of one aspect with another higher aspect, and so on through different degrees up to the Supreme Principle, is after all but the vanishing of so many ‘separative’ illusions, which certain initiations represent as a series of veils that drop away in succession.
from what occurs to one following the pitri-yâna), that cycle can only be a formless and supra-individual state. Finally, in the case where ‘Deliverance’ is about to be obtained directly from the human state, still more is implied over and above what has just been described, and in such a case the true goal is no longer Universal Being but the Supreme Brahma Itself, that is to say ‘unqualified’ (nirguna) Brahma in its total Infinitude, comprising both Being (or the possibilities of manifestation) and Non-Being (or the possibilities of non-manifestation), principle of the one and of the other, beyond them both therefore,25 while also at the same time containing them both, in accordance with the teaching that we have already expounded on the subject of the unconditioned state of Âtma, which is precisely what is referred to in the present instance.26 It is in this sense that the abode of Brahma (or of Âtma, in this unconditioned state) is even ‘beyond the spiritual Sun’ (which is Âtma in its total Infinitude, comprising both Being (or the possibilities of manifestation) and Non-Being (or the possibilities of non-manifestation), principle of the one and of the other, beyond them both therefore, while also at the same time containing them both, in accordance with the teaching that we have already expounded on the subject of the unconditioned state of Âtma, which is precisely what is referred to in the present instance. It is in this sense that the abode of Brahma (or of Âtma, in this unconditioned state) is even ‘beyond the spiritual Sun’ (which is Âtma in its total Infinitude, comprising both Being (or the possibilities of manifestation) and Non-Being (or the possibilities of non-manifestation), principle of the one and of the other, beyond them both therefore, while also at the same time containing them both, in accordance with the teaching that we have already expounded on the subject of the unconditioned state of Âtma, which is precisely what is referred to in the present instance).

24. Symbolically, it is said that such a being has passed from the condition of a man to that of a Deva (or what might be termed an ‘angelic’ state in Western language); on the contrary, at the end of the pitri-yâna there is a return to the ‘world of man’ (mânava-loka), that is to say to an individual condition, so described by analogy with the human state, although it must of necessity be different, since the being can never return to a state through which it has already passed.

25. We would however remind the reader that metaphysical Non-Being, like the Unmanifest (insofar as the latter is not merely identified with the immediate principle of manifestation, which is only Being), can be understood in a total sense whereby it is identified with the Supreme Principle. In any case, however, a correlation between Non-Being and Being, or between the unmanifested and the manifested (even if in the latter case one goes no further than Being), can only be a purely apparent one, since metaphysically the disproportion that exists between the two terms does not permit of any real comparison between them.

26. In this connection, with the object of calling further attention to the agreement of the different traditions, we will once again quote a passage from the Treatise on Unity (Risalat-al-Ahadiyyah) of Muhyî ‘d-Din ibn al-Arabi: ‘This immense thought [of the ‘Supreme Identity’] is only befitting to him whose soul is vaster than the two worlds [manifested and unmanifested]. As for him whose soul is only as vast as the two worlds [namely one who attains Universal Being, but does not pass beyond it], it befits him not. For in truth this thought is greater than the sensible world [or the manifested world, for the word “sensible” must here be transposed analogically and not confined to its literal meaning] and the suprasensible world [or the unmanifested, applying the same transposition] both taken together.’

27. On this point the orientalists, who have failed to grasp the real significance of the sun through only taking it in its purely physical sense, have suggested some very strange interpretations; thus Oltramare writes rather naively: ‘By its risings and settings the sun consumes the life of mortals; the liberated man exists beyond the world of the sun.’ Does not this convey the impression that it is merely a matter of escaping old age and attaining a corporeal immortality such as is sought by certain contemporary Western sects?

28. Brahma-Sûtras iv. 3. 7–16.

29. To these conditions words such as bandha and pâsha, the proper meaning of which is ‘bond’, are applied; from the second of these two terms is derived the word pashu, which therefore means, etymologically, any living being bound by such conditions. Shiva is called Pashupati, ‘the Lord of beings in bondage’, because it is by his ‘transforming’ action that they are ‘delivered’. The word pashu is often given a special meaning, to denote an animal victim in a sacrifice (yajna, yâga, or medha), the victim being moreover ‘delivered’ by the sacrifice itself, at least virtually so; but we cannot think of expounding here, even in summary fashion, a theory of sacrifice, which, taken in that sense, is essentially a means calculated to establish communication with higher states, and which is far removed from Western ideas of ‘redemption’ or ‘expiation’ and others of a like nature, ideas which are only intelligible from the specifically religious point of view.

through the fullness of Divine Knowledge; as for those whose contemplation (dhyāna) has only been partial, although active (metaphysical realization remaining incomplete), or has been purely passive (as in the case of Western mystics), they enjoy certain higher states, but without being able to arrive forthwith at perfect Union (Yoga), which is one and the same thing as ‘Deliverance’.

The possession of such states, which are identical with the various ‘Heavens’, constitutes, for the being who enjoys it, a personal and permanent acquisition, notwithstanding their relativity (we are dealing always with conditioned, although supra-individual states); but the Western idea of ‘reward’ must on no account be attached to this acquisition, for the simple reason that it is the fruit, not of action but of Knowledge; moreover, the notion of ‘reward’, like that of ‘merit’ of which it is the corollary, is an idea belonging exclusively to the moral order, which can find no place in the realm of metaphysics.

Knowledge, in this respect, is therefore of two kinds, and is itself described as ‘supreme’ or ‘non-supreme’ according to whether it concerns Para-Brahma or Apara-Brahma and leads therefore to the one or to the other.

1. We are alluding here to the philosophical doctrines of antiquity and of the Middle Ages, since the points of view of modern philosophy are the very negation...
short at Being, they remain incomplete even theoretically (without referring to realization, which they leave out of account altogether), and, as usually happens in such cases, they exhibit an undesirable tendency to deny that which lies outside their sphere and which, from the viewpoint of pure metaphysics, is precisely the most important part of all.

The acquisition or, to speak more accurately, the taking possession of higher states, whatever their nature, is thus only a partial, secondary, and contingent result; and although this result may appear immense by comparison with the individual human state (and above all by comparison with the corporeal state, the only one effectively possessed by ordinary people during their earthly existence), it is nonetheless true that, in itself, it amounts strictly to nothing in relation to the supreme state, since the finite, while becoming indefinite through the extensions of which it is capable, that is to say through the development of its own possibilities, always remains nothing in comparison with the Infinite. Ultimately, therefore, a result of this kind is only of value by way of preparation for 'Union', that is to say it is still only a means and not an end; to mistake it for the end is to continue in illusion, since all the states in question, up to and including Being, are themselves illusory in the sense we have attributed to that word from the beginning. Besides, in any state where some form of distinction remains, that is to say in all the degrees of Existence, including those not belonging to the individual order, it is impossible for the universalization of the being to become effective; and even union with Universal Being, according to the mode in which it is accomplished in the condition

of metaphysics; and the above statement is as true of conceptions of a pseudometaphysical stamp as of those in which the negation is frankly expressed. Naturally, our present remarks only apply to doctrines that are known to the 'profane' world, and do not refer to the esoteric traditions of the West, which, so long at least as they possessed a character that was genuinely and fully 'initiatic', could not be limited in this way, but must on the contrary have been metaphysically complete under the twofold heading of theory and realization; these traditions however have never been known to any but an elite far more restricted in numbers than in the Eastern countries.

of Prājīta (or in the posthumous state corresponding to that condition), is not 'Union' in the full sense of the word; were it so, the return to a cycle of manifestation, even in the formless order, would no longer be possible. It is true that Being is beyond all distinction, since the first distinction is that of 'essence' and 'substance' or of Purusha and Prakriti; nevertheless, Brahma, as Ishvara or Universal Being, is described as savisheshā, that is to say as 'implying distinction', since He is the immediate determining principle of distinction: only the unconditioned state of Ātman, which is beyond Being, is prapancha-upashāma, 'without any trace of the development of manifestation'. Being is one, or rather it is metaphysical Unity itself; but Unity embraces multiplicity within itself, since it produces it by the mere extension of its possibilities; it is for this reason that even in Being itself a multiplicity of aspects may be conceived, which constitute so many attributes or qualifications of it, although these aspects are not effectually distinguished in it, except insofar as we conceive them as such: yet at the same time they must be in some way distinguishable for us to be able so to conceive them. It might be said that every aspect is distinguishable from the others in a certain respect, although none of them is really distinguishable from Being, and that all are Being Itself; we therefore find here a kind of principal distinction, which is not a distinction in the sense in which the word applies in the sphere of manifestation, but which is its analogical transposition. In manifestation, distinction implies separation; but that separation has nothing really positive about it, since it is only a mode of limitation; pure Being, on the contrary, is beyond 'separateness'. That which exists at the level of pure Being is therefore 'non-distinguished', if distinction (vishesha) be taken in the sense applicable within the manifested states; and yet, in another sense there is still present an element that is 'distinguished'

2. This can be applied, in Christian theology, to the conception of the Trinity: each Divine Person is God, but is not the other Persons. In Scholastic philosophy the same might also be said of the 'transcendentals', each one of which is coextensive with Being.

3. In the individual states, separation is determined by the presence of form; in the non-individual states, it must be determined by some other condition, since these states are formless.
(vishishta): in Being all beings (meaning thereby their personalities) are 'one' without being confused and distinct without being separated. Beyond Being one cannot speak of distinction of any kind, even principal, although at the same time it cannot be said that there is confusion either; one is beyond multiplicity and beyond Unity as well; in the absolute transcendence of this supreme state none of these expressions can any longer be applied even by analogical transposition, and that is why recourse must be had to a term of negative form, namely to 'non-duality' (advaita), as we have already explained; even the word Union is undoubtedly imperfect, because it evokes the idea of Unity, but we are obliged nevertheless to make use of it for the translation of the term Yoga, since the Western languages have no alternative to offer.

Deliverance, together with the faculties and powers which it implies, so to speak, 'by superaddition' (because all states with all their possibilities are necessarily comprised in the absolute totalization of the being), but which, we repeat, must only be considered as accessory and even 'accidental' results and in no wise as constituting a final goal in themselves—Deliverance, we say, can be obtained by the yogi (or rather by him who becomes such in virtue of obtaining it), with the help of the observances indicated in the Yoga-Shãstra of Patañjali. It can also be favored by the practice of certain rites, as well as of various particular styles of meditation (hàrdà-vidyà or dàhara-vidyà); but it must be understood that all such means are only preparatory and have nothing essential about them, for man can acquire true Divine Knowledge even without observing the rites prescribed [for each of the different human categories, in conformity with their respective natures, and especially for the different āshramas or regular stages of life]; and indeed many examples are to be met with in the Veda of persons who have neglected to carry out such rites [the function of which is compared in the Veda to that of a saddle-horse, which helps a man to reach his destination more easily and more rapidly, but without which he is able to reach it all the same], or who have been prevented from doing so, and yet, by maintaining their attention perpetually concentrated and fixed on the Supreme Brahma [in which consists the one and only really indispensable preparation], have acquired true Knowledge concerning It [Knowledge which, for that reason, is, likewise called 'supreme'].

Deliverance, then, is only effective insofar as it essentially implies perfect Knowledge of Brahma; and, inversely, that Knowledge, to be perfect, presupposes of necessity the realization of what we have already termed the 'Supreme Identity'. Thus, Deliverance and total and absolute Knowledge are truly but one and the same thing; if it be said that Knowledge is the means of Deliverance, it must be added that in this case means and end are inseparable, for Knowledge, unlike action, carries its own fruit within itself; and moreover, within this sphere a distinction such as that of means and end can amount to no more than a mere figure of speech, unavoidable no doubt when one wishes to express these things, insofar as they are expressible, in human language. If therefore Deliverance is looked upon as a consequence of Knowledge, it must be specified that it is a strict and immediate consequence. This is most clearly affirmed by Shankarāchārya in the following terms:

There is no other means of obtaining complete and final Deliverance excepting Knowledge; it alone loosens the bonds of passion...
[and of all other contingencies to which the individual being is subjected]; without Knowledge, Beatitude [Ananda] cannot be obtained. Action [karma, whether understood in its general sense or as applied specially to the performance of rites], not being opposed to ignorance [avidyā], cannot remove it; but Knowledge disperses ignorance as light disperses darkness. As soon as the ignorance born of earthly affections [and other analogous bonds] is banished [and every illusion with it], the ‘Self’ [Ātmā], by its own splendor, shines afar [through every degree of existence] in an undivided state [penetrating all and illuminating the totality of the being], as the sun spreads its brightness abroad when the clouds have scattered.

A most important point to note is the following: action, no matter of what sort, cannot under any circumstances liberate from action; in other words, it can only bear fruit within its own domain, which is that of human individuality. Thus it is not through action that it is possible to transcend individuality, taking individuality here, moreover, in its integral extension, for we do not for a moment pretend that the consequences of action are limited to the corporeal modality only; our previous remarks on the subject of life, which is in fact inseparable from action, will be found applicable in this instance. Hence it follows immediately that ‘Salvation’ in the religious sense given to the word by Western people, being the fruit of certain actions, cannot be identified with ‘Deliverance’; and it is all the more urgent to state this explicitly since orientalists constantly confuse the two together.

The Self [Ātmā, since there can be no further question of jīvātmā, all distinction and all ‘separateness’ having disappeared] of him who has attained the perfection of Divine Knowledge [Brahma Vidya] and who has consequently obtained final Deliverance, ascends, on quitting its bodily form [and without passing through any intermediate stages], to the Supreme [spiritual] Light which is Brahma, and identifies itself with It, in an undivided and conformable manner, just as pure water, mingling itself with the clear lake [without however losing itself in it in any way] conforms itself in every respect therewith.

10. Some would like to translate avidyā or ajñāna as ‘nescience’ rather than ‘ignorance’; we confess that we cannot clearly see the need for this subtlety.

11. Ātmā-Bodha (“Knowledge of the Self”).

12. The common expression ‘to work out one’s salvation’ is therefore perfectly accurate.

13. Thus Oltramare, for example, translates Moksha by the word ‘salvation’ from beginning to end in his works, without seeming to suspect, we will not say the real difference which has been explained here, but even the mere possibility of inaccuracy in this identification.

14. It is hardly necessary to point out that theology, even if it comprised a realization rendering it truly effective, instead of remaining simply theoretical as is in practice the case (unless the ‘mystical states’ can be said to represent such a realization, which is only partially and in certain respects true), would always be included in its entirety in this ‘non-supreme’ Knowledge.

DELIVERANCE, in the case which has just been discussed, is properly speaking liberation achieved when 'out of the bodily form' (videha-mukti) and obtained in an immediate manner at the moment of death, Knowledge being already virtually perfect before the termination of earthly existence; it must be distinguished therefore from deferred and gradual liberation (krama-mukti), and it must also be distinguished from liberation obtained by the yogi during his actual lifetime (jivan-mukti), by virtue of Knowledge no longer only virtual and theoretical but fully effective, that is to say by genuine realization of the 'Supreme Identity'. It must be clearly understood that the body cannot constitute an obstacle to Deliverance any more than any other type of contingency; nothing can enter into opposition with absolute totality, in the presence of which all particular things are as if they were not. In relation to the supreme goal there is perfect equivalence between all the states of existence, so that no distinction any longer holds good between the living and the dead man (taking these expressions in the earthly sense). In this we note a further essential difference between Deliverance and 'salvation': the latter, as the Western religions conceive it, cannot be effectively obtained, nor even be assured (that is to say obtained virtually), before death; that which is attained through action can also always be lost through action; moreover, there may be incompatibility between certain modalities of one particular individual state, at least accidentally and under particular conditions, whereas there can no longer be anything of the kind once we are dealing with supra-individual states, and above all with the unconditioned state.\(^1\) To view things otherwise is to attribute to one special mode of manifestation an importance which it could not possess and which even manifestation in its entirety cannot claim; only the prodigious inadequacy of Western conceptions in regard to the constitution of the human being could render such an illusion possible, and only this moreover could give rise to any astonishment at the fact that Deliverance may be accomplished during life on earth as well as in any other state.

Deliverance or Union, which is one and the same thing, implies 'by superaddition', as has already been said, the possession of every state, since it is the perfect realization (sadhana) and totalization of the being; besides, it matters little whether these states are actually manifested or not, since it is only as permanent and immutable possibilities that they have to be taken into account metaphysically.

Lord of many states by the simple effect of his will, the yogi occupies but one of them, leaving the others empty of life-giving breath [prāna], like so many unused instruments; he is able to animate more than one form in the same way that a single lamp is able to feed more than one wick.\(^2\)

'\text{The yogi,'} says Aniruddha,

is in immediate contact with the primordial principle of the Universe and in consequence [secondarily] with the whole of space, of time, and of everything included therein, that is to say with manifestation, and more particularly with the human state in all its modalities.\(^3\)

\(^1\) This restriction is indispensable, for if there were an absolute or essential incompatibility, the totalization of the being would thereby be rendered impossible, since no modality can remain unincluded in the final realization. Besides, the most exoteric interpretation of the 'resurrection of the dead' is enough to show that, even from a theological viewpoint, there can be no irreducible antinomy between 'salvation' and 'incorporation'.

\(^2\) Commentary of Bhavadeva-Mishra on the Brahma-Sutras.

\(^3\) The following, a Taoist text, expresses the same ideas: 'It [the being which has reached the state where it is united to the universal totality] will no longer be dependent on anything; it will be perfectly free . . . . It is also most justly said: the superhuman being has no longer an individuality of its own; the transcendent man
Moreover, it would be a mistake to suppose that liberation acquired when the being is quit of the bodily form (videha-mukti) is more complete than liberation ‘during life’ (jivan-mukti); if certain Westerners have made this mistake, it is always as a result of the excessive importance they attach to the corporeal state, and what has just been said above dispenses us from further remarks on this subject. The yogi has nothing further to obtain subsequently, since he has actually realized ‘transformation’ (that is to say a passing beyond form) within himself, if not outwardly; it matters little to him therefore that a certain formal appearance persists in the manifested world, since henceforth, for him, it cannot exist otherwise than in illusory mode. Strictly speaking it is only for others that the appearances persist thus without external change, and not for him, since they are now incapable of limiting or conditioning him; these appearances affect and concern him no more than does all the rest of universal manifestation.

The yogi, having crossed the sea of passions, is united with Tranquillity and possesses the ‘Self’ [unconditioned Atmā with which he is identified] in its plenitude. Having renounced those no longer has any action of his own; the Sage has not even a name of his own; for he is one with the All (Chuang Tsu, chap. 1; Father Wieger’s translation, p. 1). The yogi or jivan-mukta is in fact liberated from both name and form (nāmārūpa), which are the elements that constitute and characterize individuality; we have already mentioned the texts of the Upanishads where this shedding of name and form is expressly affirmed.

4. This is the region of the ‘Lower Waters’ or formal possibilities; the passions are here taken as denoting the contingent modifications which go to make up the ‘current of forms’.

5. This is the ‘Great Peace’ (As-Saktnah) of the Islamic esoteric doctrine, or again the Pax Profunda of the Rosicrucian tradition; the word Sheklnah, in Hebrew, denotes the ‘real presence’ of the Divinity, or the ‘Light of Glory’ in and by which, according to Christian theology, the ‘beatific vision’ is brought about (cf. the ‘glory of God’ in the already quoted text of Rev. 21:23). And here is another Taoist text referring to the same subject: ‘Peace in the void is an indefinite state. It is neither taken nor given. One simply becomes established therein. Formerly one tended toward it. Nowadays the exercise of goodness and equity is preferred, which does not yield the same result. (Lieh-Tzu, chap. 1; French translation by Father Wieger, p. 77). The ‘void’ mentioned here is the ‘fourth state’ of the Māṇḍūkya Upanishad, which is in fact indefinable, being absolutely unconditioned so that it can only be pleasures which are born of perishable external objects [and which are themselves but external and accidental modifications of the being], and rejoicing in Bliss [Ananda, which is the sole permanent and imperishable object, and which is not different from the ‘Self’], he is calm and serene like the torch beneath an extinguisher, in the fullness of his own essence [which is no longer distinguished from the Supreme Brahma]. During his [apparent] residence in the body he is not affected by its properties any more than the firmament is affected by that which floats in its bosom [because, in reality, he contains all states within himself and is not contained by any one of them]; knowing all things [and thereby being all things, not distinctively, but as absolute totality], he remains immutable, unaffected by contingencies.

Thus there is no spiritual degree superior to that of the yogi and it is evident that there cannot be; considered in his concentration within himself, he is also called Muni, that is to say the ‘Solitary one’, not in the popular and literal sense of the word but as one who, in the spoken of in negative terms. The words ‘formerly’ and ‘nowadays’ refer to the different periods in the cycle of terrestrial humanity; the conditions of the present era (corresponding to the Kali-Yuga) are such that the great majority of men become attached to action and feeling, which cannot lead them beyond the limits of their individuality, still less to the Supreme and unconditioned state.

6. This makes it possible to understand the real meaning of the word Nirvāṇa, which orientalists have misinterpreted in so many ways; this term, which is by no means peculiar to Buddhism as is commonly supposed, literally means ‘extinction of breath or of disturbance’, the state therefore of a being that is no longer subject to any change or to any modification, nor to any of the other accidents or bonds of manifested existence. Nirvāṇa is the supra-individual condition (that of Prajñā), while Parinirvāṇa is the unconditioned state; the terms Nirvṛtti, ‘extinction of change or of action’, and Parinirvṛtti are also employed in the same sense. In the Islamic esoteric doctrine the corresponding terms are fāntā‘, ‘extinction’, and fānta‘-al-fāntā‘, literally ‘extinction of the extinction’.

7. Shankaracharya’s Ātma-Bodha.

8. The root of this word Muni appears to be the same as that of the Greek μύων, ‘alone’, although some people have connected it with the term manana, which denotes reflective and concentrated thought; but this is most unlikely from the standpoint of etymological derivation, as well as from that of the meaning itself (for manana, derived from manas, can only properly apply to individual thought).
fullness of his being, realizes the state of 'perfect Solitude', which does not allow any distinction between outer and inner, nor any extra-principlial diversity whatsoever to subsist in the Supreme Unity (or as we should say, to be strictly accurate, in 'Non-Duality'). For him the illusion of 'separateness' has finally ceased to exist, and with it every confusion engendered by the ignorance (avidyā) which produces and sustains that illusion, for,

imagining first that he is the individual 'living soul' (jīvatma), man becomes afraid (through belief in the existence of some being other than himself), like one who mistakes 10 a piece of rope for a serpent; but his fear is dispelled by the certitude that he is not in reality this 'living soul', but Atma Itself in Its unconditioned universality. 11

Shankarachārya names three attributes that correspond in a way to so many functions of the Sannyāsin, the possessor of Knowledge, who, if that Knowledge be fully effective, is none other than the yogi: 12 these three attributes are, in ascending order, bālyā, pāndityā, and mauna. 13 The first of these words means literally a state comparable to that of a child (bāla): it is a stage of 'non-expansion', if one may so call it, where all the powers of the being are concentrated as it were in one point, realizing by their unification an undifferentiated simplicity, comparable to embryonic potentiality. 15 In a sense which is somewhat different, but which completes the foregoing (since it implies both reabsorption and plenitude), it also means the return to the 'primordial state', of which all the traditions speak and which Taoism and Islamic esoterism more especially stress. This return is in fact a necessary stage on the path leading to Union, since it is only from this primordial state that it is possible to escape the limits of human individuality in order to rise to the higher states. 16

A further stage is called pānditya, that is to say 'learning', an attribute indicating the teaching function; the possessor of Knowledge is qualified to communicate it to others or, more accurately speaking, to awaken corresponding possibilities within them, since Knowledge in itself is strictly personal and incommunicable. The Pāndita therefore partakes more especially of the character of Guru or 'Spiritual Master'; 17 but he may be in possession of the perfection of theoretical knowledge only, and for this reason it is necessary to take into account, as a still further and final stage, mauna or the state of the Muni, as being the only condition in which Union can genuinely be realized. There is yet another expression, Kaivalya, which also means 'isolation', 18 and which at the same time expresses the ideas of 'perfection' and 'totality'; this term is often employed as an equivalent of Moksha: kevala denotes the absolute and unconditioned state which is that of the 'delivered' being (mukta).

We have described the three attributes mentioned above as representing so many stages preparatory to Union; but obviously the yogi

10. Such an error is called vivarta; it is properly speaking a modification which in no wise reaches the essence of the being to which it is attributed, and which therefore only affects the person who thus attributes it in consequence of an illusion.
11. Shankarachārya's Ātma-Bodha.
12. The state of Sannyāsa is strictly speaking the last of the four āśramas (the first three being the states of Brahmachārī or 'student of the sacred science', disciple of a Guru, of Grihastha or 'householder' and of Vanapraštha, or 'anchorite'); but the name Sannyāsa is also sometimes extended, as in the present case, to the Sādhu, that is to say to the man who has achieved perfect realization (sādhanā) and who is ativārānāshramī, as we have explained before.
13. Commentary on the Brahma-Sūtras 1.1.4-47-50.
14. Cf. these words from the Gospels: 'Let the children come to me... for to such belongs the Kingdom of Heaven...whoever does not receive the kingdom of God like a child shall not enter it.' (Matt. 19:24; Luke 18:16-17).
15. This stage corresponds to the 'concealed Dragon' of the Far-Eastern symbolism. Another frequently used symbol is that of the tortoise which withdraws itself entirely into its shell.
16. This is the 'edenic state' of the Judeo-Christian tradition; it explains why Dante placed the Terrestrial Paradise on the summit of the mountain of Purgatory, that is to say at the exact point where the being quits the Earth, or the human state, in order to rise to the Heavens (described as the 'Kingdom of God' in the foregoing Gospel quotation).
17. This is the Shaykh of the Islamic schools, also called Murabul-murtdin; the Murād is the disciple, like the Hindu Brahmachārī.
18. This again is the 'void' referred to in the Taoist text quoted a little way back; and this 'void' is also in reality the absolute fullness.
who has reached the supreme goal possesses each one of them a for- 
tiori, since he possesses all states in the fullness of his essence.19 
These three attributes are implied moreover in what is called aish-
varya, namely participation in the essence of Ishvara, for they cor-
spond respectively to the three Shaktis of the Trimurti: if it be 
understood that the fundamental characteristic of the ‘primordial 
state’ is ‘Harmony’, it will immediately be apparent that bālya corre-
sponds to Lakṣmi, while pānditya corresponds to Sarasvati and 
mauna to Pārvati.20 This point is of special importance for under-
standing the nature of the ‘powers’ that pertain to the jīvan-muktas, 
as secondary consequences of perfect metaphysical realization. 

Furthermore, the exact equivalent of the theory we have just 
mentioned is also to be found in the Far-Eastern tradition: this is 
the theory of the ‘four Happineses’, the first two being ‘Longevity’, 
which, as has already been remarked, is simply perpetuity of indi-
vidual existence, and ‘Posterity’, which consists in the indefinite pro-
longations of the individual through all his modalities. These two 
Happineses therefore only concern the extension of the individual-
ity and they are included in the restoration of the ‘primordial state’, 
which implies their complete attainment; the remaining two, which 
refer on the contrary to the higher and extra-individual states of the 
being,21 are the ‘Great Wisdom’ and the ‘Perfect Solitude’, that is to 
say pānditya and mauna. Finally, these ‘four Happineses’ attain 
their fullness in a ‘fifth’, which contains them all principally and 
unites them synthetically in their single and indivisible essence: no 
name is ascribed to this ‘fifth Happiness’ (any more than to the 
‘fourth state’ of the Māṇḍūkya Upanishad), since it is inexpressible 
and cannot be the object of any distinctive knowledge: it is however 
easy to see that we are concerned here with nothing less than Union 
itself or the ‘Supreme Identity,’ obtained in and through complete 
and total realization of what other traditions call ‘Universal Man’, 
for the yogi, in the true sense of the word, like the ‘transcendent 
man’ (chen-jen) of Taoism, is also identical with ‘Universal Man’.22

19. It is also worth noting that these three attributes, taken in the same order, 
are in a sense respectively ‘prefigured’ by the first three āshramas; the fourth 
āśrama, that of the Sannyāsa (to be understood here in its most usual sense), so to 
speak recapitulates and sums up the other three, just as the final state of the yogi 
embraces ‘eminently’ all the particular states that have previously been traversed as 
so many preliminary stages 
20. Lakṣmi is the Shakti of Vishnu; Sarasvati or Vāch is that of Brahmā; Pārvati 
is that of Śiva. Pārvati is also called Durgā, that is to say ‘She who is difficult of 
approach’. It is interesting to observe that something corresponding to these three 
Shaktis is to be found even in the Western traditions: thus, in Masonic symbolism 
the three chief pillars of the Temple are ‘Wisdom, Strength, and Beauty’; here Wisdom 
is Sarasvati, Strength is Pārvati, and Beauty is Lakṣmi. Similarly, Leibnitz, 
who had been the recipient of some esoteric teaching (rather elementary in charac-
ter however) from a Rosicrucian source, describes the three principal divine 
attributes as being ‘Wisdom, Power, and Goodness’, which comes to exactly the 
same thing, for ‘Beauty’ and ‘Goodness’ are fundamentally but two aspects of a sin-
gle idea, which is precisely the idea of ‘Harmony’, conceived by the Greeks and 
especially by Plato.

21. This explains how it is that the two first ‘Happineses’ fall within the prov-
ince of Confucianism, whereas the two others pertain to the realm of Taoism. 
22. This identity is similarly affirmed in the Islamic esoteric teaching concern-
ing ‘the manifestation of the Prophet’.
To give as exact an idea as possible of the actual state of the yogi who, through Knowledge, is 'delivered in this life' (jīvan-mukta) and has realized the 'Supreme Identity', we will once again quote Shankarāchārya: his remarks on the subject, describing the highest possibilities to which the being can attain, may serve at the same time as a conclusion to the present study.

The yogi, whose intellect is perfect, contemplates all things as abiding in himself [in his own Self, without any distinction of outer and inner] and thus, by the eye of Knowledge [jñāna-chaksuṣa, a term which can be rendered fairly exactly by 'intellectual intuition'], he perceives [or rather conceives, not rationally and discursively, but by a direct awareness and immediate 'sensing'] that everything is Atma.

He knows that all contingent things [the forms and other modalities of manifestation] are not different from Atma [in their principle], and that apart from Atma there is nothing, 'things differing simply [in the words of the Veda] in attribution, in accident, and in name, just as earthen vessels receive different names, although they are but different forms of earth'; and thus he perceives [or conceives, in the same sense as above] that he himself is all things [since there can no longer be anything which is 'other' than himself or than his own 'Self'].

When the accidents [formal and otherwise, including subtle manifestation as well as gross manifestation] are suppressed [these accidents only existing in illusory mode, in such a way that they are really nothing in relation to the Principle], the Muni [taken here as a synonym of the yogi] enters, with all beings [inasmuch as they are no longer distinct from himself] into the all-pervading Essence [which is Atmā].

He is without [distinct] qualities and actionless; imperishable [akshara, not subject to dissolution, which exercises dominion only over the manifold], without volition [applied to a definite act or to determined circumstances]; abounding in Bliss, immutable, without form; eternally free and pure [unable to be constrained, reached, or affected in any way whatsoever by anything other than himself, since this other is non-existent or at least experiences but an illusory existence, while he himself dwells in absolute reality].

1. Ātma-Bodha. In grouping together a selection of passages from this treatise we shall not feel constrained to follow the order of the text too strictly; moreover, in general, the logical sequence of ideas cannot be exactly the same in a Sanskrit text and in a translation into a Western language, by reason of the differences that exist between certain 'ways of thinking' upon which we have laid stress on other occasions.

2. See Chhāndogya Upanishad vi.1.4–6.

3. It should be noted in this connection that Aristotle, in his book Ἐν ψυχῇ [On the Soul], expressly declared that 'the soul is all that it knows'; this sentence reveals a fair measure of agreement on this point between the Aristotelian and the Eastern doctrines, in spite of the reservations always called for on account of the difference between the respective points of view; but this affirmation, in the case of Aristotle and his successors, seems to have remained purely theoretical. It must therefore be admitted that the consequences of this idea of identification by Knowledge, as far as metaphysical realization is concerned, have continued quite unsuspected in the West, with the exception, as we have said before, of certain strictly initiatic schools, which had no point of contact with all that usually goes by the name of 'philosophy'.

4. 'Above all things is the Principle, common to all, containing and penetrating all, of which Infinity is the proper attribute, the only one by which It can be characterized, for it bears no name of Its own' (Chuang Tzu, chap. 25; translation by Father Wieger, p.437).

5. Cf. the 'actionless activity' of the Far-Eastern tradition.
He is like Ether [Ākāsha], which is diffused everywhere [without differentiation] and which pervades the exterior and interior of things simultaneously; he is incorruptible, imperishable; he is the same in all things [no modification affecting his identity], pure, impassible, invariable [in his essential immutability].

He is [in the very words of the Veda] 'the Supreme Brahma, which is eternal, pure, free, single [in Its absolute perfection], continually abounding in Bliss, without duality, [unconditioned] Principle of all existence, knowing [without that Knowledge implying any distinction of subject and object], which would be contrary to Its ‘nonduality’ and without end.

He is Brahma, after the possession of which there remains nothing to possess; after the enjoyment of whose Bliss there remains no felicity to be desired; and after the attainment of the Knowledge of which there remains no knowledge to be obtained.

He is Brahma, which once beheld [by the eye of Knowledge], no object is contemplated; being identified with which, no modification [such as birth or death] is experienced; which being perceived [but not however as an object perceptible by any kind of faculty], there is nothing further to perceive [since all distinctive knowledge is thenceforth transcended and as it were annihilated].

He is Brahma, which is disseminated everywhere and throughout all things [since there is nothing outside It and everything is necessarily contained in Its Infinity]; in intermediate space, in that which is above and in that which is below [that is to say in the totality of the three worlds]; the Real, abounding in Bliss, without duality, indivisible and eternal.

6. Ubiquity is here taken as the symbol of omnipresence in the sense in which we have already employed this word above.

7. The reader may usefully be reminded here of the Taoist text quoted earlier on at greater length: ‘Do not inquire whether the Principle is in this or in that; it is in all beings. (Chuang Tzu, chap. 22; Weiger’s translation, p395).

He is Brahma, pronounced in the Vedānta to be absolutely distinct from that which It pervades (and which, on the contrary, is not distinct from It or at least only distinguishes itself from It in illusory mode) continually abounding in Bliss and without duality.

He is Brahma, by which [according to the Veda, are produced life [jīva], the inward sense [manas], the faculties of sensation and action [jnānendriyas and karmendriyas], and the elements [tanmātras and bhūtas] which compose the manifested world [in the subtle as well in the gross order].

He is Brahma, in which all things are united [beyond every distinction, even principal], upon which all actions depend [and which is itself actionless]; that is why It is disseminated throughout all things [without division, dispersion, or differentiation of any sort].

He is Brahma, which is without size or dimension [unconditioned], without extension [being indivisible and without parts], without origin [being eternal], incorruptible, without shape, without [determined] qualities, without assignment or attribute of any kind.

He is Brahma, by which all things are illuminated [participating in Its essence according to the degree of their reality], the Light of which causes the sun and all luminous bodies to shine, but which is not itself made manifest by their light.

He himself pervades his own eternal essence [which is not different from the Supreme Brahma], and [simultaneously] he contemplates the whole World [manifested and unmanifested] as being [also] Brahma, just as fire intimately pervades a white-hot
iron ball, and (at the same time also reveals itself outwardly [by
manifesting itself to the senses through its heat and luminosity]).

Brahma resembles not the World,10 and apart from Brahna
there is naught [for, if there were anything apart from It, It could
not be infinite]; everything that appears to exist apart from It
cannot exist [in this manner] save in illusory mode, like the
apparition of water [mirage] in the desert [mara].11

Of all that is seen, of all that is heard [and of all that is perceived
or conceived by any faculty whatsoever] naught [veritably] exists
apart from Brahna; and by Knowledge [principal and
supreme], Brahna is contemplated as alone real, abounding in
Bliss, without duality.

The eye of Knowledge contemplates Brahna as It is in Itself,
abounding in Bliss, pervading all things; but the eye of ignorance
discovers It not, discerns It not, even as a blind man perceives
not the sensible light.

The 'Self' being illumined by meditation [when a theoretical and
therefore still indirect knowledge makes it appear as if it were
receiving the Light from a source other than itself, which is still
an illusory distinction], and then burning with the fire of Know-
ledge [realizing its essential identity with the Supreme Light], is
delivered from all accidents [or contingent modifications], and
shines in its own splendor, like gold which is purified in the
fire.12

When the Sun of spiritual Knowledge rises in the heavens of the
heart [that is, at the center of the being, called Brahna-pura], it
dispels the darkness [of ignorance veiling the single absolute
reality], it pervades all, envelopes all and illumines all.

He who has made the pilgrimage of his own 'Self', a pilgrimage
not concerned with situation, place, or time [or any particular
circumstance or condition],13 which is everywhere14 [and
always, in the immutability of the 'eternal present'], in which
neither heat nor cold are experienced [no more than any other
sensible or even mental impression], which procures a lasting
felicity and a final deliverance from all disturbance [or all modi-
fication]; such a one is actionless, he knoweth all things [in
Brahna], and he attaineth Eternal Bliss.'

10. The exclusion of any sort of pantheistic conception is here reiterated; faced
with such clear statements, it is difficult to account for certain errors of interpreta-
tion which are so general in the West.

11. This word mara, derived from the root mri, 'to die', applies to any barren
region entirely lacking in water, and more especially to a sandy desert, the uniform
aspect of which can be taken as a support of meditation, in order to evoke the idea
of the principal indifferentiation.

12. We have seen before that gold is looked upon as being itself of a luminous
nature.

13. 'Every distinction of place and time is illusory; the conception of all possible
things (comprised synthetically in Universal Possibility, absolute and total) is
effected without movement and outside time.' (Lieh-tzu, chap. 3; Father Wieger's
translation, p102.)

14. Similarly, in the Western esoteric traditions, it is said that the true Rosicru-
cians meet 'in the Temple of the Holy Ghost, which is everywhere'. It must be
clearly understood that the Rosicrucians in question have nothing in common with
the numerous modern organizations which have adopted the same name; it is said
that shortly after the Thirty Years' War they left Europe and withdrew into Asia.

Réné Guénon (1886-1951) was one of the great luminaries of the twentieth century, whose
critique of the modern world has stood fast against the shifting sands of intellectual fashion.
His extensive writings, now finally available in English, are a providential treasure-trove for
the modern seeker: while pointing ceaselessly to the perennial wisdom found in past cultures
ranging from the Shamanistic to the Indian and Chinese, the Hellenic and Judaic, the Christian and
Islamic, and including also Alchemy, Hermeticism, and other esoteric currents, they direct the
reader also to the deepest level of religious praxis, emphasizing the need for affiliation with a revealed
tradition even while acknowledging the final identity of all spiritual paths as they approach the
summit of spiritual realization.

Man and His Becoming according to the Vedanta is Guénon's central exposition of traditional metaphysics, companion to his other two great works in this genre: The Symbolism of the Cross and The Multiple States of the Being. Guénon held that Hinduism embraces the most ancient, profound, and comprehensive expression of traditional metaphysics we possess, which can in some ways function as a key to every other traditional form, and this work has been called the first reliable exposition of Hindu metaphysics in any Western language. Before Guénon, the West's image of Hinduism was a hodge-podge of translated scriptures lacking traditional commentary, fragments of doctrine reported by Jesuits and other missionaries, random impressions of merchants, imperialists, and adventurers, unreliable Eurocentric constructions of the orientalists, and the fantasies of the Theosophical Society and their ilk. To this day, Man and His Becoming remains one of the best (if not the best) expositions of the doctrines of the Vedânta, an exposition entirely free from the modernizing and Westernizing tendencies that first infiltrated the Indian subcontinent under the British Raj and have not yet abated. This text is a veritable bible of traditional metaphysics and anthropology. In his Studies in Hinduism and Introduction to the Study of the Hindu Doctrines, Guénon treats historical and cosmological aspects of Hinduism in further detail.

The Collected Works of Réné Guénon brings together the writings of one of the greatest prophets of our
time, whose voice is even more important today than when he was alive.

 Huston Smith, The World's Religions

No living writer in modern Europe is more significant than René Guénon, whose task it has
been to expound the universal metaphysical tradition that has been the essential foundation of ev
culture, and which represents the indispensable basis for any civilization deserving to be so.

A. K. Coomaraswamy, Time and
